Welp, I predicted it accurately. Can't interject yourself into a
conversation you weren't invited to without the personal insults, huh
Carl?

>That's what service manuals and schematics are for ... figure out which
>chip is bad, them order a replacement if it's not in your junk box ...

That's easier said than done. When one of my HF radios went bad at field
day two years ago, I was able to troubleshoot the problem down to this
very large IC with 150 pins. Several outputs went to other nondescript
ICs. Yaesu service's solution: replace the board.

>[whining about the cost of test equipment deleted in the public interest ...
>see my reply to Scott's whining in the same vein in another post]

Maybe test equipment isn't a factor in your life, Carl, but it is in
many people's lives. With a household income in the mid-20's, the typical
american family doesn't have a lot of money to spend on test equipment that
costs thousands of dollars after paying the rent/mortgage, the monthly
payment into Jenny's college fund, and paying the rest of the bills.

If you're more well-off financially than the average person, more power
to you. The sooner you realize that not everyone in the world was meant
to be a doctor, lawyer, or engineer, and subsequently doesn't have the
same earning power, the sooner you might be able to develop some
understanding of why things aren't the way you think they are.

>If you took the time to find out the truth of the matter, you'd find that
>a very large number of us who are "in the business" (of radio and/or

>computer electronics) got interested in the field as youngsters because
>of ham radio ...

In some instances. In other instances, some people I know had an interest
in electronics and got involved in ham radio because of that.

>Many of us *are* "like the mailman who takes a walk on his day off" ... many of
>us feel fortunate to be able to earn very fine livings doing something that we
>enjoy enough to play with for fun in the evenings and on the weekends ...
>(I get the impression that you don't like your job or your lot in life very
>much ...
>certainly not like I like mine ... I feel sorry for you for that ... genuinely
>..)

I love the work I do. I also have two children, and love them more than work.
Unfortunately, at the present time, its necessary for me to make a sacrifice
and spend less time with them in exchange for providing a secure financial
future. After putting in a 10-hour day, I prefer to spend some time with
my kids before they run off to bed.

In your case, Carl, either you don't have kids, or they're grown and have
lives of their own -- I don't know which. If I didn't have kids, I would
be looking for other things to occupy my time, and maybe I would spend
more time applying what I do at work to amateur radio. Maybe in 20 years
I'll know.

I work with a dozen different radio techs, none of whom have amateur
licenses, and many of whom admittedly know a whole lot more about radio
technology than me. I've tried to get them involved in amateur radio, but the
generic response has always been "I do this all day at work -- when I
go home I want to do something else" (I haven't had one complain about
the morse requirement keeping them out.)

>And before you start telling me "get a life" and calling me a geek, I would
>point out that I have a lovely wife, that I took 3 years off from work to sail
>from California to Florida at a VERY leisurely pace, and I also play the

>(we have a 12" Schmidt-Cassegrain 'scope ... with computer controlled drive,
>of course ... CCD imaging comes soon ... I'm thinking of designing and building
>a new CCD camera and writing the software for it)

Well, good for you. My hobbies include long-distance precision sharp-shooting,
aikido, kendo, horseback riding, non-fiction literature (primarily early
American studies -- at one point I was seriously considering doing my PhD
on it), and amateur astronomy (I own a Meade LX200 12" SCT with
the equitorial "superwedge" and use a Toshiba laptop with "The Sky" to
control it.) Amateur radio fits in there too. I don't like sailing, so I
don't own a sailboat, I instead own a Checkmate 18" powerboat with a
Mariner 150hp outboard engine -- although I've been so busy these past
three years, I haven't used it once, so I think I'll sell it and just buy
myself a center-console bass boat next year.

>Baloney ... there are about a half a dozen major problems that can easily
>be identified by anyone with any sense ... Solve them and 99% of ham radio's
>problems will be gone ... the remainder are trivial ...

That's just plain nonsense, Carl, and you know it. Just as there are
600,000 different reasons why people got their licenses, there are
600,000 different reasons why people are not as active today as they
once were.

>Actually, if you knew how to apply your coding skill to amateur radio
>applications, you might be quite useful ... if you're as good as you seem
>to think you are ... but you don't like what you do enough for that, right???

Even worse: I'm better than you think I might potentially be.

Apply my skills to amateur radio? No, I don't think so. I put in my 10
hours, and I'd prefer to spend an hour or two at night taking my 'scope
out and teaching my kids earth sciences and astronomy rather than sitting
in my 'shack writing DSP firmware.

>A certain amount of technology is necessary to build, field, and maintain
>the radio systems necessary to provide public service communications
>(just the technical and learning part is ALSO very valuable to society ...)

Of course, nobody denies this.

>However, you are right about needing to learn how to communicate ...
>but knowing Morse code does not contribute to that skill one iota ...

Funny, but I don't see the words "morse code" in my message at all.

>as someone said the other day, it is just as easy (probably easier)
>to instill the proper procedures and protocols into people for use on
>voice nets as it is for CW nets ... and voice nets can be much more
>effective in tactical situations ... for bulk traffic transport, Morse can't
>come close to a well-designed digital system in terms of accuracy,
>efficiency, and throughput rate ...

Naturally. One uses the tool appropriate for the job. You don't use a hammer
when you need a wrench. Most emergency traffic is local, and VHF/UHF
communication is best for local comms -- hence, 2 meter VHF FM.

>Besides ... use "propeller-heads" can communicate pretty well ...
>I've logged many hundreds, perhaps into the low thousands, of
>hours of emergency services air time ... much of it as NCS ...
>and my packet site in SoCal was used extensively during several
>earthquakes, lots of major brush fires, and the crash of an AeroMexico
>jet airliner into a residential neighborhood with the loss of all aboard
>and a few on the ground ...

I would say that you are an exception to the rule, then, Carl.

>We also won't get their help if they perceive us as a bunch of backward, stuck
>in the past, olde fartz who still think Morse code is "the bee's knees" ...

If Mike Tyson, a convicted rapist, can make a popular return to Boxing,
I would submit to you that even if what you claim above is a problem (which
I don't think it is), it wouldn't make a difference with proper P.R.

In reality, the average American doesn't even know what amateur radio is.
They think amateur radio is CB. I can't count the number of people who have
climbed into my truck, pointed at my radio, and said "oh, is that a CB?"

>applied,
>can be a force in teaching people technical skills and getting people
>interested
>in technical fields so that there are workers to build things here again
>instead
>of having all those jobs go overseas ...

(I could make a comment about how all these techno-geniuses might be able
to build all kinds of nifty stuff, but they lack the common sense to figure
out where the 80-column mark is on their terminal... but I won't....)

Many people today get involved in computers. This leads to a variety of
job paths -- programming, systems engineering, firmware engineering,
maintenance, tech, management -- the list is virtually endless. Heck, I
knew kids in college who were building their own circuit boards to do
things with the old IBM 8-bit ISA bus.

Amateur radio will never be able to compete with this type of environment.
Computers are too ingrained into the fabric of our society today. When
people decide to get involved in "high-tek", they're going to get involved
more with the computer sitting in the family's den. (1/3rd of all
American households have a personal computer.)

>The Japanese are not "working for peanuts" ... they're "working SMARTER" ...
>it's time we turned the tide and ham radio *could* be a very noticeable factor.

You're deluding yourself if you think amateur radio will ever amount to
anything more than a pasttime. At one point amateur radio was hot -- it was
a way into many of those "high tech" fields. Today, those roads are
available by alternate means, just as the "entry level" license in ham
radio has changed from the Novice to the Codeless Tech.

Hi gang:

I got this response from Congresswoman Diana DeGette, who's a member of the House Commerce Committee. A "NO" vote from her would speak VOLUMES for this hobby IMHO.... :-)

BTW, it has been brought to my attention that some people couldn't decode my earlier post as it was MIME coded and some suggested using ASCII. Well, my newsreader doesn't seem to support or use ASCII, so I'm going to try using uuencode instead. My humble apologies if this isn't decodable.

I am, BTW, using Gravity, which is a 32-bit newsreader...

73's for now my friends!!! :-)

> Simply what PEP means,is it the real outpout of the station?

That depends what you are measuring or calculating. In the USA, the term is defined and used in FCC Radio Amateur Licenses as the peak power out of the transmitter or rf amplifier into the antenna transmission line. It is measured at key-down or at the peak of any amplitude modulation such as SSB, and is averaged over the rf cycle.

(6) PEP (peak envelope power). The average power supplied to the antenna transmission line by a transmitter during one RF cycle at the crest of the modulation envelope taken under normal operating conditions.

On the other hand the current UK licence (different spelling) defines the maximum PEP that is fed into the antenna, and so allowances may be made for any tranmission line, ATU and other losses before the antenna. In earlier licences the UK amateur's PEP limit was defined as the Peak Envelope Power of the *DC input* to the final RF amplifier, so in those times any lack of amplifier efficiency also reduced the allowed radiated output power.

I don't know how the VE license is worded.

So the term PEP can be used in many different ways and is quite general. If you can explain in what context you wish to understand the use of the term, perhaps a more specific answer can be given

>VE2MOM
PEP= peak envelope power.

The RF power measured peak-to-peak instead of an RMS value.
With the average human voice, in SSB mode, the PEP power output is
generally considered to be 2 times the RMS output.

In modes such as CW, the PEP and the RMS values are the same.

Things get a bit more complicated when other modes such as Pactor,
AM, etc are discussed....it's a good area for study...

PEP, Peak Envelope Power, is measured at the highest level of power, on modulation peaks, during a voice transmission. These modulation peaks occur as often as ten times each second during a normal speech transmission.

On one of these maximum power occurrences, PEP is the average power over one complete cycle of the radio frequency sine wave.

The peak instantaneous power is 2.0 times greater than the peak envelope power. It is the highest instantaneous value of the RF power on a modulation peak.

4132. TS-830 Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-12 00:00:00 UTC
From: Jack <ka2ivs@idt.net>
Message-ID: <34193A04.1FB1@idt.net>
Source record: 190583

I'm having trouble with my old, but very low milage TS-830. Although it used to develop about 120 watts key down, I can only get about 40 out now. The plate HV reads about half of normal. The loading characteristics seem normal, it's just that everything is at reduced power.

Something with the power supply? Filter capacitors or rectifiers?

Any help would be appreciated.

The peak instantaneous voltage is 1.414 times the rms voltage and the peak instantaneous current is 1.414 times the rms current, therefore the peak instantaneous power is 2 times the average power.

Bob,

How can you make that statement. Everyone has read the press release issue by Lou and even quoted by the ARRL. Only the USA mrket has closed on Azden ham gear. You of course could make a simple call to Lou or Sid to verify things.

Azden's reason for leaving was that there are too many dualband radios available at low prices and they had no dualbander to offer. They placed RF expertise in clean single band units and weren't about to invest the R&D capital.

I work in industry so I get access to state of the art test
equipment, big budgets and all that sort of thing. The problem is that
I've got to develop things to become the next state of the art. Just
throwing money and all the latest gear at this problem is not enough.
Trying to find ways to create things that are better than the tools
available is great fun - sort of like creative cheating. You can't win
all the time, but the thrill from the successes makes it, overall,
satisfying. Having a quirky mind that looks at things from different
directions helps, having far too much curiosity for comfort helps too,
but in the end browsing around for inspiration and pure luck may be the
best tools.

At home, in the shack, I'm away from the phase-noise test rack etc.
yet I can still do plenty of interesting things, and it teaches me that
while the basic tools are essentials, the fancy stuff can be
circumvented if you have time and can handle a bit of inconvenience.

Here's what I've bought for the shack:

Russian Stereo microscope, new, superb 200 pounds

OKI surface mount soldering system including
"hot tweezers" second-hand 70 pounds

Marconi 2008 sig gen second-hand 80 pounds
(300 pounds normally, but I bought a faulty one and fixed
it. Only the tuning scale cord was jammed :-)

Wayne-Kerr precision LCR bridge 40 pounds

HP180 scope/plugins (well, I like them..) 70 pounds

To annoy Gary:

In a box of unsorted junk from a govt surplus dealer at a small
rally in the Scottish Borders, I found a pair of new HP
thermistor mounts, still in all their NATO
packaging. An absolute snip at
50 pence.

Now, non of the above were in any way connected with my job. Anyone else could have bought them. Anyone who was at least looking. Those thermistor mounts had to be the wildest luck, though.

There are bargains out there, and there's a lot that can be done with them.

Cheers
David GM4ZNX

Do you really need to worry about .1378 in. compared to
.125in.? These things don't look that critical to me. Besides, even
if they call it 1/8 in., i'll bet it's made as a 3.5mm overseas anyway.

4139. GE MVP UHF

Source record: 190590

Hello all...

I got my GE MVP UHF rig to work and now I just have to make the mods on the new SAS board. The power output when I first got it to work was about 40W with a 1.4:1 SWR..now it's around 22W with a 1.2:1 SWR but the power drops when you key it up for more than about 3 secs. It drops at a rate that you can easily see it on a SWR meter. Does anyone have any ideas why this power drop would be occurring? The 10V reg. is heat sinked on another board, and this 10V circuit is hard-wired into the SAS board.
The radio heat sink gets warm after several minutes...this , I assume, is normal.
But I need to try to figure out why the power is only 20W now and why it starts to drop within a few secs after being keyed up.

Any ideas?

[Replace the x with 8 for correct E-Mail Address]

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1997 at the Castle Armoury in Bury on Sunday, the 14th September, 1997.

The Castle Armoury, known locally as the Drill Hall, is a New Venue for this Annual Fair, being just round the corner from the Former Venue (the Castle Leisure Centre). It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am and Disabled Visitors will be admitted half an hour earlier. Admission Charges have been kept at One Pound for Adults and Accompanied Children under Fourteen Years Old will be admitted free of Charge.

There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

I am new to CW and trying to figure out what this zero beat tuning stuff is. I have a loaner ICOM-706. I have never zero beat tuned any other radio, so I am pretty clueless.

Could some one with ICOM-706 experience please help understand the series of steps I go through on this particular rig (and menu and command set) to zero beat tune a received CW tone? I have a CW keyer hooked to the 706.

General procedural suggestions would also be welcome.

to monitor Falcon Gold experiment;
New version of STSPLUS available;
Western States Weak Signal Society
Technical Conference set; Southeastern
VHF Society confab set; AMSAT on vacation

ALL VANITY APPLICATIONS TO REQUIRE FORM 159

The ARRL has learned that when the vanity application fee jumps to $50 on Monday, September 15, the FCC also will start requiring everyone filing a paper Form 610V Amateur Station Vanity Call Sign Request to include FCC Form 159, FCC Remittance Advice, with their application--no matter the method of payment. Applications received on or after September 15 and lacking a Form 159 will not be processed and will be returned to the applicant.

Previously, the FCC only required an Form 159 with a hard-copy Form 610V if the applicant was paying with a credit card or money order--or for a single remittance to cover multiple applications.

The change came on very short notice, and the FCC has yet to issue a formal public notice to address it. But the FCC appears ready to stand firm on the requirement starting September 15. A spokesperson at the FCC in Gettysburg said that on or after September 15, Mellon Bank--the FCC's fiscal

agent--will not cash or deposit any fees which are not accompanied by a Form 159. Applications received at Mellon Bank that lack a Form 159 will be forwarded to Gettysburg for handling (the fee will not be deposited), and Gettysburg will return the entire application and the fee to the applicant with a blank Form 159 and instructions to refile.

When completing Form 159, all applicants must include a taxpayer ID number (your Social Security number) in Item 1 (FCC Account Number). In Items 14A and 14 B, Payment Type Code, applicants should write "WAVR."

FCC Form 159 can be obtained by writing ARRL/VEC, 225 Main St, Newington, CT 06111. An SASE is appreciated. Form 159 also is available from the FCC via the Internet at http://www.fcc.gov/formpage.html or ftp://ftp.fcc.gov/pub/Forms/Form159/. You can also get the form by return fax by calling 202-418-0177 and requesting Form 000159. The FCC Forms Distribution Center also accepts orders at 800-418-3676.

If you need assistance completing Form 159 or need filing information contact the FCC National Call Center at 888-225-5322.

The FCC still has given no indication of when it will begin processing Gate 3 vanity call sign applications. It's estimated that more than 1000 applicants filed on the opening day, August 6. The FCC also has not said when it plans to open vanity Gate 4.--Bart Jahnke, W9JJ

SUNSPOT NUMBER TOPS 100 FOR FIRST TIME IN THREE YEARS!

Sun watcher Tad Cook, K7VVV, in Seattle, Washington, reports: The rise in solar activity continues, and on Monday, September 8, solar flux values peaked at 119.4. The last time the solar flux was above this value was January 27, 1994. On the same day the sunspot number was 101, which has been unequaled since September 3, 1994. We are definitely through the minimum and on the upswing of the next solar cycle!

The average solar flux for the previous 90 days rose another two points this past week (to 77), as it had the previous week. September 11 was the 38th consecutive day that the flux was above the 90-day average. This greatly increased activity has brought along some geomagnetic disturbances. The most disturbed period over this past week was around 0600 to 0900 UTC on September 9. Recent projections from the NOAA Space Environment Service Center show the solar flux dropping below 100 after September 17, then rising to above 100 around September 26, and above 115 after October 4. These estimates are based upon the previous solar rotation, so new active regions on the Sun could send these numbers higher.

This new activity means that DX now is possible on the higher HF bands. Prior to now, 20 meters was the primary band for worldwide propagation. Check 15 and even 10 meters, where openings are now possible, especially over north-south paths. Combined with the progression toward the Fall equinox, conditions now and over the next month should be the best seen in several years!

Sunspot numbers for September 4 through 10 were 56, 79, 85, 84, 97, 101 and 95, with a mean of 85.3. The 10.7-cm flux was 93, 96, 97.6, 102, 119.4, 116.1 and 114.9, with a mean of 105.6, and estimated planetary A indices were 19, 5, 7, 3, 9, 19, and 19, with a mean of 11.6.

PHASE 3D LOOKING FOR A NEW RIDE

Now that it's clear that the Phase 3D Amateur Radio satellite definitely will not be aboard the Ariane 502 rocket later this month, AMSAT has begun angling with the European Space Agency (ESA) for a new launch opportunity. It's also asking hams to hold their tongues.

This week, AMSAT made official what most observers had already figured out for themselves--that the Phase 3D payload would not be going up at month's end. In late July, AMSAT announced that it would have to structurally modify the Phase 3D spaceframe to bring it up to new mechanical standards made necessary by a late change in ESA launch environment specifications. But, making the changes put Phase 3D out of sync with the Ariane 502 launch schedule. As a result, ESA concluded that Phase 3D would not be able to fly on the Ariane 502 mission as initially hoped. The soon-to-be-completed structural changes also added $25,000 to Phase 3D's cost.

ESA's action did not go over well with some hams who posted what AMSAT called "several derogatory comments regarding ESA" on the AMSAT bulletin board. This week, AMSAT defended ESA against the critics and declared that ESA "has been very supportive of AMSAT for almost 20 years."

AMSAT pointed out that, while the first Phase 3 satellite "was a passenger on an Ariane vehicle which, unfortunately, ended in a launch failure in 1980," ESA has since "made amends" by using Ariane vehicles to launch AO-10, AO-13, the four Microsats and two UoSats, KO-23, KO-25, IO-26 and AO-27. AMSAT says it's in AMSAT's best interests that the Ariane 502 launch goes well "even without Phase 3D aboard."

Similar sentiments were expressed August 30 during a Phase 3D Program Board meeting at the Orlando Phase 3D Integration Lab. Participants in that meeting were Karl Meinzer, DJ4ZC, AMSAT-DL president and Phase 3D project leader; Werner Haas, DJ5KQ, AMSAT-DL vice president; Peter Guelzow, DB2OS, representing the Command Station Team; Ron Broadbent, G3AAJ, AMSAT-UK Secretary; Joel Harrison, W5ZN, ARRL vice president; Keith Baker, KB1SF, AMSAT-NA executive vice president; and Bill Tynan W3XO AMSAT-NA president.

The Program Board called on hams to "do everything we can to promote the successful launch of Phase 3D, particularly being especially careful of what we say on public forums such as AMSAT-BB or in letters to the editors of various magazines." Meinzer is continuing negotiations with ESA representatives regarding a launch vehicle for Phase 3D. The Board's statement stressed that "all of us should avoid doing anything that could possibly hinder" those talks.

MIR OVERCOMES MORE PROBLEMS

US astronaut Mike Foale, KB5UAD, hardly had a chance to decompress from his space walk last weekend when the primary onboard Mir computer crashed

Monday--the third such failure in as many months. As a result, the space station lost its orientation toward the sun and was unable to aim its solar arrays. However, this latest computer crash was not being considered as serious as the others. Past computer crashes had left Mir in uncontrolled orbit, requiring the crew to shut down all nonessential systems and plunging the space station into near darkness. But Foale told NASA's Matt Bordelon, KC5BTL, on Monday that the crew took this latest computer failure in stride. "Mike says this is the least serious problem that he's encountered while on Mir," Bordelon said. The computer module was replaced earlier this week, and things have returned to what passes for normal aboard Mir these days. By week's end, however, the Mir crew was powering up the Priroda science module, down since June 25, when the Spektr module was damaged after the space station collided with an unmanned cargo rocket.

Early last Saturday, Foale became only the second American to share spacewalking duties with a Russian crewmate aboard Mir. Foale and Anatoly Solovyov ventured outside the space station to examine the exterior of the damaged Spektr module. But the pair was unable to locate the leak in Spektr. The crew now believes the leak is at a point where a motor that drives a damaged solar array is attached to Mir's "pressure hull." In a packet message following the space walk to MIREX President Dave Larsen, N6CO, the British-born Foale noted that he and Solovyov did their space walk "while most of the world was occupied with the sad loss of Princess Diana and her funeral, about which we are also very sad." Foale said that he would remember forever " the views of the Earth and Milky Way, and station, in the light of a sickle moon."

Concluded Foale: "I hope more people in the future, and many more supporters of human space flight, will one day get the chance to have such experiences as I have been lucky to be granted."

Meanwhile, the experimental 70 cm ham radio frequency for Mir seems to be working out well, according to early reports. Tom Daniels, N3CXP, in Allentown, Pennsylvania, apparently was Foale's first voice contact on the new 437.650 MHz frequency. Daniels reports he had a very successful FM voice contact with Foale on September 7, and said he was able to easily program in the Doppler shift corrections necessary. Foale remarked during the QSO that on the 2-meter frequencies, "it was getting to the point that I didn't work voice at all because it was getting frustrating for me."

The temporary Mir frequency swap experiment is scheduled to end by September 29.

NEXT SAREX FLIGHT NOT UNTIL AUGUST 1998

The next Shuttle Amateur Radio EXperiment (SAREX) flight is nearly a year away. The SAREX payload will be aboard STS-93, scheduled to launch August 27, 1998. This five-day mission is the only SAREX mission scheduled during the next year, but another flight is under consideration, according to Frank Bauer, KA3HDO, AMSAT vice president for Manned Space Programs. While the shuttle will be involved in construction of the International Space Station (ISS), the SAREX Working Group decided last year to not fly SAREX aboard ISS

construction or shuttle/Mir docking flights. This is because of the heavy astronaut workload involved on these missions (and the need to swap antennas during Mir docking flights). The silver lining here is that the shuttle activity on behalf of the ISS lays the groundwork for a permanent Amateur Radio presence aboard the International Space Station when it is completed and occupied.

Regarding Mir International Amateur Radio EXperiment (MIREX) opportunities: the ARRL has obtained waivers from the FCC so that Mike Foale, KB5UAC; David Wolf, KC5VPF; and Wendy Lawrence, KC5KII, have permission to operate the Mir radio and engage in third-party communications with nonhams on Earth. This is the good news. But no official MIREX/SAREX school group contacts with these astronauts are planned at this time due to the tenuous situation on Mir, where power still is at a premium. The SAREX and MIREX teams do not plan to restart the school group contacts with the astronauts until the Mir problems are corrected and until the Phase 1 Office (NASA's Mir Office) clears the way for the team to officially perform contacts with the astronauts again. In the meantime, hams are encouraged to talk to KB5UAC when he is on the air.

Anyone wishing to apply for a school group contact for future shuttle missions or with Mir should request an application. Write to ARRL-EAD, 225 Main St, Newington, CT 06111. There is quite a long waiting list for schools to be selected for SAREX or MIREX contacts.

To request electronic versions of the ARRL SAREX Bulletin and the SAREX school application via e-mail, send an e-mail message to info@arrl.org. Leave the subject line of the message blank. In the body of the message, type:

SEND SAREXFAQ.TXT

SEND SAREX-AP.TXT

QUIT

Then, send the message. The ARRL's automated information server will automatically send two documents via return e-mail. For more SAREX and Mir information, see the ARRLWeb page, http://www.arrl.org/sarex and http://www.arrl.org/sarex/Mir.html.

IARU REGION 3 CONFERENCE CONCLUDES IN BEIJING

Representatives of Amateur Radio organizations in 20 Asia-Pacific countries have spent the past week reviewing proposals and papers submitted by member societies at the 10th Regional Conference of IARU Region 3 in Beijing, the People's Republic of China. The Chinese Radio Sports Association (CRSA) hosted the week-long conference, which just wrapped up. Representatives of the ARRL were on hand for the event, September 8-12.

Only a fortunate few in North America were able to hear--or even work--special event station BT1IARU, the on-air emblem of the Region 3 gathering. Although conditions were not favorable to this part of the world,

the station made many QSOs elsewhere. Things also went well at the conference itself.

The conference's three working groups developed recommendations for consideration by the full conference. Recommendations adopted by the conference dealt with subjects as diverse as preparations for future ITU World Radiocommunication Conferences, strategic planning for the regional organization, electromagnetic compatibility issues, the IARU monitoring system, beacons, Amateur Radio direction finding, and many others.

Among conference highlights was the participation of representatives of the Vietnam Amateur Radio Club, which hopes to join the IARU.

David Rankin, 9V1RH, retired as a director after 24 years of service as Regional Secretary and Director, half of that time as Chairman of Directors. The other incumbent directors, HL1IFM, JJ1OEY, ZL2AMJ, and 9M2SS were re-elected. Former Director David A. Wardlaw, VK3ADW, was returned to office. Keigo Komuro, JA1KAB, was re-elected as Regional Secretary. Fred Johnson, ZL2AMJ, continues as Chairman of Directors.

The more than 100 conference attendees complimented the CRSA for the arrangements, which included excellent logistical support of the conference plus a visit to the Great Wall and the Summer Palace in Beijing.

Representing the ARRL at the Beijing conference were ARRL President Rod Stafford, KB6ZV, assisted by First Vice President Steve Mendelsohn, W2ML, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Naoki Akiyama, NX1L. International Affairs Vice President Larry Price, W4RA, attended in his capacity as IARU Secretary.

The next IARU Region 3 conference will be held in Australia in 2000.--David Sumner, K1ZZ

AMATEUR RADIO AWARENESS DAY IS SEPTEMBER 20

September 20 marks Amateur Radio's annual Awareness Day event, a special opportunity for you to raise public awareness about Amateur Radio in your community.

Typical Awareness Day activities have included demonstrations, talks to school groups and working with local news representatives to publicize the day on TV, radio or in a local newspaper. Have an idea that's a bit out of the ordinary? Give it a shot! Anything you can do to positively promote our hobby and our service is what Awareness Day is all about.

Contact ARRL's Media Relations Manager Jennifer Gagne, N1TDY, for your publicity kit today! Call 860-594-0328 or e-mail jgagne@arrl.org. Check out http://www.arrl.org/pio for Awareness Day materials and other information that can help you promote Amateur Radio all year long.--Jennifer Gagne, N1TDY

N4XKG PLUGS HAM RADIO ON THE TODAY SHOW

Persistence paid off for Jackie Forbes, N4XKG, of Punta Gorda, Florida, who wanted to top off her visit to New York City by getting a chance to plug ham radio, the ARRL, and--not incidentally--her 70th birthday on NBC Television's The Today Show. She succeeded. Forbes wrote to the show's director and even pulled a trump card, sending along a photo of herself and Bill Miller, who worked on Today in the early days, when Dave Garroway was the host.

Still not knowing if she'd be granted a few fleeting seconds of fame on national TV, Forbes arrived outside NBC on the morning of her birthday, August 4. Only then did she learn that Today personality Al Roker would give her a live shot at 7:35 AM. During her interview, Forbes greeted ham radio operators. The Tech Plus licensee also told a Punta Gorda newspaper that she wanted to be on The Today Show to draw attention to the ARRL's efforts to protect ham radio frequencies from incursions by commercial interests.--thanks to Larry Brown, KD4KVE

IN BRIEF:

* This weekend on the radio: The ARRL September VHF QSO Party and the Second Annual American and Canadian Islands Contest are this weekend (see September QST, page 105). Also on tap is the Worked All Europe Contest, SSB event (see August QST, page 95).

* SAREX video wins award: A video that focused on a successful SAREX contact during the STS-94 mission earlier this summer has won an award. The video about Center Street School in El Segundo, California, won the "Community Spirit" award during the South Bay Producers Guild Media Arts Awards. The awards were presented August 27 to honor individuals who had produced programs for local cable systems.

* Ham-teacher authors journal article: "Is This Frequency in Use?" is the title of an article on technology and Amateur Radio in the classroom, authored by ARRL registered teacher Michelle "Missy" Hollenbeck, AA0OF, of Andover, Kansas. It has been accepted for the November issue of Educational Leadership magazine, published by the Association of Supervision and Curriculum Development. The article lists ARRL's Educational Activities Department as a source of information. Hollenbeck also has recently written items for QST, CQ and 73, and she told EAD's Glenn Swanson, KB1GW, recently that she's "real proud to be an Amateur Radio operator today."--Glenn Swanson, KB1GW

* Volunteers sought to monitor Falcon Gold experiment: Cadets and faculty of the United States Air Force Academy--in cooperation with University of Colorado-Colorado Springs--have designed a small space payload that will be launched on an Atlas rocket the last week in October. Named Falcon Gold, the mission will sample the Global Positioning System (GPS) signal from behind the GPS constellation and downlink spectrum samples to ground stations for post processing. Due to its short (three-week) lifespan and a limited number of ground stations, the researchers are looking for volunteers around the world to collect telemetry and mission data from the satellite and forward

electronic copies to the Air Force Academy. The satellite will transmit on 400.175 MHz, accessible from many scanners and Amateur Radio equipment. The data will be at 9600 using the AX.25 protocol used by hams. For more information, see http://www.pcisys.net/~mork/ or e-mail Brian Mork, morkbj.dfc@usafa.af.mil.--Brian Mork

* New version of STSPLUS available: Dave Ransom has updated the popular STSPLUS shareware program used to track the shuttle and the Mir space station. The latest version, a maintenance update "to correct a few bugs" is version 9736. Ransom says the file names on his BBS and home page are now sop9736a.zip and sop9736b.zip. Users can download the new files from http://www.dransom.com or from the BBS at 520-282-5559 (8, N, 1).

* Western States Weak Signal Society Technical Conference set: The 1997 Western States Weak Signal Society Technical Conference will be held October 3-5 at the Montecito-Sequoia Lodge, Sequoia National Forest, California (between Kings Canyon and Sequoia National Parks, 65 miles east of Fresno). Among other things, the conference will feature presentations on VHF amplifier design; 6-meter EME and large array engineering; VHF DXpeditions; VHF contesting; designing power dividers, and regulatory issues of interest to weak-signal enthusiasts. There also will be antenna gain measurements and noise figure testing, equipment testing and tuneup, and ARRL/VEC license exams. For rates and reservations, call Montecito-Sequoia at 800-227-9900. Conference registration is $15 ($20 at the door). For more information visit http://www.qsl.net/n7stu/ or contact Robert Brown, N7STU, e-mail wswss@contesting.com.

* Southeastern VHF Society confab set: The second annual Southeastern VHF Society Technical Conference will be held April 3 and 4, 1998, at the Atlanta Marriott Northwest Hotel near Marietta, Georgia (same location as the 1997 conference). The program includes technical presentations, antenna range measurements, preamplifier noise-figure testing, vendor displays and presentations, flea market, SVHFS auction and Saturday evening banquet. Information updates are available on the SVHFS web page, http://www.akorn.net/~ae6e/svhfs/. If you are interested in presenting a technical paper or other presentation at the 1998 Conference, contact James Worsham, WA4KXY, Conference Chairman, at wa4kxy@bellsouth.net.--Tad Danley, K3TD

* AMSAT on vacation: The AMSAT office in Silver Spring, Maryland, will be closed from September 15 until September 19.

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

If 75 and 20m were "channelized", with channels say, 3 kHz apart, how many "bad" channels would we have, Drew? How many amateurs are participating on those "bad" channels? 600? That would be about 0.1% of the U.S. amateur population. 60? That's now about 0.01%.

The canvas is just too great to be spoiled, no matter how broad a brush you use.

Photography is an art form. Part 97.1(b) mentions radio as an art. There is no difference. Things can be done with light and shadow in B&W photography that just don't have the same effect as when they're done in color.

Maybe the anti-code crowd can take a hint at this, but then again...

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello, I have an old Azden PCS-3000. The microphone on the unit has been destroyed (the mic coil-cord and end connector are good) and I would like to retrofit another mic to the unit. The original mic had the following features: PTT, M1 call, volume control, key lock, and freq. up/down buttons. I would like to install a generic mic with touch-tone pad. Does anyone have any recommendations?

Also, does anyone know where I might find a new mic connector for the rig so that I can simply attach it to the new mic without having to splice into the old cable?

Dear Mr. Cook:

Thank you for contacting me to express your opposition to H.R 2369, the
Wireless Privacy Enhancement Act. I appreciate learning your views on
this issue.

Like you, I would not want to see legislation implemented that unduly
burdens thousands of shortwave radio enthusiasts across America. While
this bill is well intended, it does raise some concerns as to who will
be affected by its scope. A HAM operator who accidentally comes across
a private conversation on his radio should not necessarily be subject to
criminal prosecution. I am also worried that the simple act of selling
HAM operator equipment could be construed as a criminal act.

As you may know, this bill has been referred to the House Commerce
Committee of which I am a member. I look forward to discussing this
bill with the rest of the Committee, and hopefully finding a way to
address the concerns you have raised. Please be assured that as I
consider this legislation, I will keep your interests in mind.

Thank you for taking the time to share your thoughts with me. Please feel free to contact me again about this or any other issue that concerns you. I also look forward to meeting with you at one of my "storefront speakouts" that you mentioned in your letter.

Sincerely,

Diana DeGette
Member of Congress

Hi Folks,

I need to obtain a transmitter/reciever or schematics for a transmitter/reciever. I only need to send a signal about 50 feet. I must be able to tune a transmission to a certain frequency and then bandpass that signal at my reciever. I need to send two or three different frequency signals at different times. Where could I buy such a transmitter/reciever unit or obtain schematics. Please Help.

Also, what would be the best frequency to transmit over this short range to avoid interference from outside signals?

Then explain why the UN (United Nations) has jurisdiction over
antarctica? That is an international preserve for the study of nature
and all laws and treaties stipulated to do apply.

I dare say, I think your foot just intercepted your mouth on this one.
Better get some gold bond for your gums.

Then not too many of the current generation of amateurs are have the
'unique experience' then, as keying a mike and talking is about all
the current generation of amateurs know about the hobby.

Dennis, you did not score a direct hit. You listed two Republicans of
which there are no assertions that they have ever taken a dollar with
the request that they support certain legislation. However, look at our
current DEMOCRATIC administration. Clinton and Gore are both being
investigated for illegal campaign contributions from the COMMUNIST
GOVERNMENT OF RED CHINA of all places!!!
Clinton and the Democratic National Committee accepted over 4,000,000
last year from the Red Chinese. Do you think that the commies in China
were giving CLinton this money because they love him? NO! They want
something in return for that money, but at this time, noone knows what
it is that they want the Demcrats to do for them.

I also got my catalog for free by just asking when I made a small
purchase (something like $5.00). Are they still charging for the
catalogs at others stores?
>>

Same here, I got it for free. Basicly, if you ask, you get it for free,
if you don't, you pay $2.99.

Source record: 190416

```
----------------------
Realistic HTX-212 Mod
----------------------

If you own the Realistic (Radio Shack) HTX-212 mobile radio, you probably
know that the radio can recieve 136-174 MHz. You also know that it cannot
transmit in that range. Well, the sneaky enginners at Tandy sneaked one
little unpublished feature in. Yep, all band transmit. To enable all band
transmit, hold down <F>unction and <T-SQL> while powering up the radio.
Now you have "wide band transmit". You can transmit 136-174 MHz. But
remember, even if you ARE licensed to use a business band frequency, this
radio is NOT FCC Approved for those freqs, so DO NOT TRANSMIT OUTSIDE THE
AMATEUR BAND!! DO NOT RISK LOOSING YOU LICENSE!!! A big thanks goes out to
Skygod11@aol.com for providing me this info. On another note, if anyone
knows of any such "keypad tricks" for the Realistic HTX-202 HT, please let
me know. Thanks, and good luck with the mod. Compiled 9\14\97.

The reason the UN has jurisdiction over Antartica is only because they
say they do and there are no citizens of Antartica to disagree with
them.
Go to Antartica, start your own country, and tell the UN to take a hike
through the glaciers, dont forget your own army though.

4169. QSK de future licensee: a question for VEs and VECs, others

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-13 00:00:00 UTC
From: NOkiminySPAM@couriernet.infi.net
Message-ID: <5vfckk$92f$1@nw001.infi.net>
Source record: 190420

After hearing the 2m RACES net during storms on my scanner, I decided to look into getting a license. So, I bought a study guide written by Gordon West (WB6NOA), not looking closely at the cover: the questions are good to June 30, 1997. I have heard on this NG that the questions are being changed so that the examinee needs to learn basic theory rather than just memorize the answers. I could pass the Element 2 test right now off the top of my head, but I want the Tech license.
QUESTION #1: Should I go to the library and check out a book on basic radio wave theory and basic electronics?

Question #2: How much will a basic UHF/VHF set-up cost me (transceiver, SWR, antenna, coax)? If I can find a ham meet near me, how much would used equipment cost?

Question #3: Where can I go to get a list of what UHF/VHF transceivers are out there, and which ones to avoid?

Question #4: I live on the top (i.e. third) floor of an apartment building with a small balcony. Is it realistic to try to wire up an antenna, on the balcony or should I get an HT for the time being, until I move into a house?

Question #5: I'm really interested in packet radio. What prices (new and used) can I expect?

QSL here or by e-mail.

Thanks,

Pete.

Orlando, the question you pose is virtually impossible to answer. It is a bit like "How high is up?" or "What color is blue?" What is the best radio is very much operator dependant. What are your needs? I have an ICOM IC-2710H which I find to meet or exceed my needs, but my needs are not necessarily the same as yours. I use mine on local 2m and 70cm repeaters, as well as to listen to local public services such as ambulance and fire departments. If I want to cross-band repeat, it will do the job. Do I want to transmit on frequencies outside the amateur bands? I have no need, and have not sought any modifications which might permit that to be done. Tell us a bit more about what you want a radio to do, and the group may be able to tell you which radio does what you want better than another may.

Hi to all, I'm in need of 3 Sigma relays.

the numbers on the relay are:
49RE1C1VW - 12DC-SCO
10A, 28VDC/12VAC
TV-3
360VA 240VAC MAX
Pilot Duty

Anyone know where I can buy them NEW.

I know I could match them with something else but I'd
like to use the originals.

Thanks, Mark N2FLF

4176. Radio Control Robot Communication Options?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-13 00:00:00 UTC
From: "Robert W. Brewer" <rbrewer+usenet@op.net>
Message-ID: <m3u3fpdesc.fsf@monet.op.net>
Source record: 190473

In the USA, what options are available to me for controlling
a small mobile robot in my residence?
I would like to set up a full duplex
radio link with the robot. The host computer would send commands
to the robot, and the robot would send back sensor data.
I have an Advanced license.

Here are some possibilities I've thought of so far:

1. Ham RC on 6 meters. This seems only good for 1 direction, however.

2. Commercial RC transmitter modified to interface with computer.
Would this break the type acceptance of the radio?
Again, only good for 1 direction.

2. Part 15. I don't know much about it, but would low enough
power transmitting be ok for this homebrew application? I
only plan to drive the robot around inside my house, so I don't
need much range.

3. Commercial wireless modems. May be pretty good.

4. Unspecified digital codes above 50.1 MHz. I'd rather
not interrupt the command and sensor data to send my callsign.
Actually, how would I send my callsign if I'm using
an unspecified digital code?

5. A hacked cordless phone with conventional modems at both the
handset and the base. I read about this on comp.robotics.misc.

Does anyone have any additions or deletions for this list?
What advantages and disadvantages are there with these techniques?
My main interest is learning something, so the commercial
wireless modems are low on my list.
Any recommendations?

You forget about those of us who actually enjoy debating with Burt <G>
Even though I consider him the ultimate cop-out (because he would
rather put down amateur radio than improve it), his posts still
generate some of the most interesting discussion here (I am NOT
talking about the "Burt sucks" kind of stuff. I definitely feel that
Burt is out in left field. I think he is a cop out, BUT I think its
more fun to simply call him on his statements. Oh well, that's just
my opinion, and we are know that opinions are like anus holes and mine
occasionally stinks :>

DIVISIONAL NEWS

NEW MEMBERS.

A warm welcome is extended to the following new members approved at
the Council Meeting on Friday night 12 Sept 1997.

Full Members:
VK2CSS Gordon SANGSTER of West Kempsey
VK2HT Neville BOWDEN of Mayfield
VK2ZI Trent SAMPSON of Moree
VK2CIM Peter PESUTTI of Nth Albury
VK2SJN Benjamin HARO of Croydon Park
VK2BAN Renato PISANI of Kurri-Kurri
ZL3KD Alfred George HARDING of Whitby, New Zealand

Associate Members:
William LECKEY of Essington
Edna Joy COLLEY of Essington
Thomas NOTT of Wahroonga
Victor BLAHA of Lightning Ridge

We hope that you will have a long and happy association with the VK2
Division. Applications for membership approved since the end of
January 1997 now stands at 100.

--Eric Fossey VK2EFY, Divisional Secretary

AFFILIATED CLUBS NEWS

The next VK2 division Affiliated clubs net is next Sunday 21 September
on 3.695 at 9 am local time.

VK2 DIVISIONAL AWARD

The theme for this quarters award is for Literary excellence. That is the writing of articles for Amateur Radio Magazine or your clubs magazine. The value of this quarters award is $40.00 awards are only for WIA members.

Nominations must be received at Amateur Radio House by Monday 6 October.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer

REGULATION EXAMINATIONS

The ACA have approved our new Regulation examination papers. All exams wil now be based on the new regulations which have been in force for some time now.

The material required for study purposes can be obtained from all ACA offices or at the ACA web site, http://www.aca.gov.au, and is titled AMATEUR RADIO SERVICE INFORMATION PAPERS.

Thank you for your co-operation in this matter.

--June Fox at the WIA Federal office

WICEN NEWS

The "Cycle Sydney 50km Bike Ride" will be held next Sunday, and the VRA has advised us that due to the various squads still recovering from the Thredbo disaster, they are desparately short of volunteers. It therefore behoves WICEN members and other interested personnel to fill the gap, so please contact Kevin VK2CKD, or your local Co-ordinator, or the Divisional Office, if you can help. Based upon last year's experience by your learned scribe, the most strenuous activity would appear to be the ability to walk in front of traffic and stop it (preferably without getting
run over), but seriously, you will be required to watch a busy intersection

without traffic lights, and to keep in mind the cyclists' safety at all times.

Is there anyone out there who cares about Cycle Safety, and would like to help? Do let us know.

Next month looks like being quite busy. The Oberon Car Rally, run by Neil VK2XNF, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October; and the annual Bungonia Cave Rescue, run by Mark VK2XGK, will be on the weekend following, over 25th-26th October.

The latter exercise, Bungonia, is planned to be a full-scale DVR (Disaster Victim Registration) exercise, with co-operation from the NSW Police and the other paid (and unpaid) services.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN

nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

REQUEST FOR HELP

The Division has had a request for help from Richard Olszowy of Western Australia. He needs 4 valves type KT 88 in good working order. He is prepared to pay an appropriate reasonable sum for them. If you can help, please ring 08 9399 2904 reverse charges (that is his home number) His work number is 08 9535 3822 (ask for Richard), or write to him at Lot 5 "Old" Admiral Road, Bedfordale WA 6112.

If you need clarification of these numbers or address, you can get them from Pixie at the Divisional Office.

--submitted by Eric Fossey VK2EFY - Divisional Secretary

AMATEUR RADIO AWARENESS DAY IS SEPTEMBER 20

September 20 marks Amateur Radio's annual Awareness Day event, a special opportunity for you to raise public awareness about Amateur Radio in your community.

Typical Awareness Day activities have included demonstrations, talks to school groups and working with local news representatives to publicize the day on TV, radio or in a local newspaper. Have an idea that's a bit out

of the ordinary? Give it a shot! Anything you can do to positively promote our hobby and our service is what Awareness Day is all about.

On Internet, check out http://www.arrl.org/pio for Awareness Day materials and other information that can help you promote Amateur Radio all year long.

--Jennifer Gagne, N1TDY, in the ARRL Letter, vol 16 no 36, dated 12 September

SPACE NEWS

MIR HAM OPERATIONS TO SHIFT TEMPORARILY TO 70 CM

Ham radio voice and packet operations aboard the Russian Mir spacecraft have shifted from 2 meters to 70 cm. An ''experimental'' worldwide FM simplex frequency of 437.650 MHz will temporarily replace the current 2-meter operating frequencies, until 29th September.

Operations will return to 2 meters after the experiment ends. In the meantime, the shift could make it a bit more difficult to work Mir. For starters, power requirements will be higher than on 2 meters--25 W ERP or greater--although contacts using an H-T are not out of the question.

Also, some transceivers do not cover the satellite subband (435 to 438 MHz).

The Mir International Amateur Radio EXperiment (MIREX) is conducting the 70 cm test based on suggestions from several Amateur Radio satellite groups who are interested in the feasibility of operating Mir and

the International Space Station on 70 cm. MIREX hopes the experiment will determine whether the 70-cm frequency receives interference from the existing commercial VHF equipment on Mir and whether 70-cm operation will interfere with onboard equipment.

More important for simple ground stations, however, is whether they'll be able to compensate for 70-cm Doppler shift on voice or packet. MIREX President Dave Larsen, N6CO, concedes that Doppler will be the biggest challenge for earthbound hams trying to work Mir on 70 cm. The Doppler on 70 cm is plus or minus 10 kHz. Most radios include 5-kHz tuning steps, and to work Mir on voice you will need to get within 3 kHz of the Mir receiver frequency. To work Mir on packet, the frequency error must be less than 2 kHz.

Miles Mann, WF1F, of MIREX, recommends compensated for Doppler by memory programming odd-split channels in advance. He reminds users that both the transmit and receive frequencies must change, if you program channels in advance.

Larsen said this week that if the experiment does not work out, ''it will be
cut short.'' He said he hopes a filter that could be sent to Mir as early as
October will minimize desensing of the 2-meter transceiver by Mir's commercial equipment on 143 MHz.

--ARRL Space Bulletin 029, dated 5 September, 1997

DX REPORT

MALDIVES - Listen for Roberto EA4DX signing 8Q7XX until September 21. Activity will be SSB only on 80 to 10 meters. Special attention will be
paid to 17 and 12 meters.

SAINT PAUL ISLAND - Several operators will be active as CY9DX from September 12 to 22, also in the SAC and WAE contests as well.

ANGOLA - Look for D2AI starting September 15. He will be active on 80 to 10 meters, including 24 and 18 meters, using SSB and RTTY. Some RS-12 satellite activity is expected. He will try to schedule some activity on 6
meters.

THAILAND - Fred K3ZO will be active using mostly CW as HS0ZAR from a club station from September 14 to October 6. Look for him on 40 to 10 meters. There will be no newer band activity.

ITALY - Special Event Station IY1EY will be active on all bands, using CW, SSB and RTTY from September 20 to 28 to celebrate the radioeletric experiments made between 1919 and 1936 by Guglielmo Marconi from his ship the ''Elettra'' in the Ligurian Sea.

TURKEY - The Telsiz Radyo Amaterleri Cemiyeti club will be on all bands until September 21 as YM4WAG for the World Air Games.

CAMBODIA - XU2C and XU2A will be active until September 15, using CW, SSB and RTTY.

WILLIS ISLAND - The ODXG DXpedition has begun and operators are signing VK9WM. Look for VK9WY as well. Operations are expected to continue until September 22.

--ARRL DX Bulletin 39, dated 11th September, 1997

CLUB NEWS

TAMWORTH RADIO CLUB INC

Tamworth Radio Club Inc will be organising a interactive display at the Moonbi House Annual Fete. This yearly project gives the public a good idea at the wide variety of communications media now availabe to the radio hobbyist.

On display will be JVFAX, HF & VHF Communication, Satelite Communication & Computer Educational Programs to help with Morse & Theory exams. A selection of equipment will also be on display dating back from 1915.

The fete will be held on the 14th September 1997 (TODAY) starting around 10am. All most welcome.

ST GEORGE AMATEUR RADIO SOCIETY

The St.George Radio Society will conduct it's Bill Shakespeare Auction on Saturday 20th September in the function rooms of Grandviews Bowling Club 821 Forest Rd.Peakhurst.

Sellers should have their items at the rooms at 10.00am with buyers being requested not to enter the premises till 11.00am to permit the organisers to prepare the venue.

The auction should commence soon thereafter approx 11.30-12.00.

--Forwarded by Noel VK2BSN

WAVERLEY AMATEUR RADIO SOCIETY

The society is planning to organise a trip to the biggest ham gathering in the USA in 1999. This is the Hamvention at Dayton held every May.

Although it is nearly 2 years ahead, we are interested in finding out how many might like to consider joining us, whether or not members of our club.

The advantages of a group going together include savings on accommodation and fares as well as the company of fellow VKs. Cost looks to be around the $2500 mark. If you think you might like to join us, please contact Raffy Shammay, VK2RF, for further details. Raffy can be contacted on 02-9389-9188 during business hours or after hours on 02-9130-5128. You can also call him on the Paddington repeater most evenings.

A reminder that our next meeting will be on Wednesday, 17th September at 7:30 pm, so come along and see what our latest audio-visual equipment will do.

Our clubhouse is next door to the Rose Bay RSL Club in Vickery Avenue, Rose Bay, off New South Head Road.

If you know someone in the Sydney Eastern Suburbs who would like to become a Ham, The Society will be starting a theory and regulations course for prospective amateurs. The course starts at 2pm on Saturday 20th September, 1997 at the Rose Bay clubrooms.

For further information phone Raffy VK2RF on 02 9389 9188 (work), that's 02-9389 9188, or Eric VK2KUR on 02 9735 5826 that's 02 9735 5826.

--Simon Buxton, VK2EII, President

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C, Inc WILL BE HELD ON
SEPTEMBER 14 - TODAY AT 1.00PM PROMPTLY
TOPICS WILL BE AS FOLLOWS

1. JOTA - IT IS ON!!! - ATV WILL BE AT TWIN SITES

2. MARK VK2XOF WILL DEMONSTRATE THE NEW ANTI-HOWL ROUND
BOX OF TRICKS FOR DUPLEX COMMUNICATIONS

3. DAVE VK2GIO WILL SHOW THE NEW REPEATER - NEARING
COMPLETION IN A FEW WEEKS - AND WILL EXPLAIN ALL ABOUT IT

4. BOB VJ2R WILL HAND OUT NEW YELLOW AND PINK CARDS
THIS IS GOING TO BE A VERY BUSY TECHNICAL MEETING BE EARLY
AT 1.00PM

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE
INTERESTED IN AMATEUR TELEVISION

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects. Visitors are always welcome.

September's lecture is an introduction to Fox Hunting. Adrian VK2BFN from the Blue Mountains ARC will be the quest speaker, he will demonstrate equipment and techniques. All those who are interested in this exciting facet of our bobby are more than welcome to attend on the night. Call in on 146.550 MHz simplex from 7:00pm for directions to the meeting.

Jamboree-of-the-Air is on the weekend of the 18th and 19th of October, Operators and helpers are required to make this weekend a success.

Could members who are able to help on these days contact John VK2TJE or Les VK2TJ.

Don't forget the October meeting is a "Home Brew" competffion. So bring along your favourite project and be in the running to win a prize.

Upcoming Events are:

September 16: Fox Hunt Information Night presented by Blue Mountains ARC

October 18/19: JOTA

October 21: Home Brew Competition

November 18: A report on the 1997 ARRL Convention

December: Christmas BBQ & Aucton

--Submitted by. Publicity Officer, Chris VK2ZCJ

CHIFLEY AMATEUR RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton.

Members, Guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater VK2RCZ, On Friday nights at 8.00pm. All checkins are welcome.

The Frequency is 147.075 with a positive offset.

The 2 Meter repeater has an input on 434.425 MHz in the 70 centimeter band on test. We will be pleased to receive reports on its coverage.

For more information ring (02) 9837 2226 or (02) 9834 1186.

--The Publicity officer Michael VK2E

CENTRAL COAST AMATEUR RADIO CLUB

The Central Coast Amateur Radio Club Wil be hosting a lecture next Friday 19 September 1997.

Paul Clutter VK2SPC will be describing the Hubble space telescope and the development which led up to the current state of technology.

Members and visitors are invited to. Coffee, tea and biscuits will be available.

The lecture will commence at 8.00 pm next Friday 19 September 1997 and will be held in the Central Coast Amateur Radio Club Clubrooms, Dandaloo St, Kariong.

Enquiries may be directed to 043 402500.

--Submitted by John Pogson VK2DBC, Publicity Officer

SUMMERLAND AMATEUR RADIO CLUB

(1) THE NEW WICEN COMMUNICATIONS CARAVAN HAS PASSED IT'S FIRST TEST WITH FLYING COLOURS. OUR WICEN GROUP WERE ASKED TO ASSIST WITH COMMUNICATIONS, AT SIEVERAL CHECK POINTS FOR A RECENT INTERSTATE BICYCLE CLASSIC RIDE. THE AREA COVERED THE SOUTH EAST CORNER OF VK4 AND THE NORTH EAST CORNER OF VK2.

MANY MESSAGES WERE SUCCESSFULLY PASSED TO AND THROUGH THE MOBILE COMMUNICATIONS VAN, WHICH HAD BEEN SET UP AT MURWILLIMBAH

EVERYONE WAS VERY PLEASED THAT THE HUNDREDS OF MAN-HOURS , BY A DEDICATED FEW, HAD FINALLY PAID OFF. THE FEW BUGS HAVE BEEN IRONED OUT AND IT WAS SHOWN THAT NO MORE THAN FOUR OPERATORS IN THE VAN AT ANY ONE TIME, WAS DESIRABLE.

ANOTHER JOINT EXERCISE IS PLANNED FOR NEXT WEEK-END, AROUND THE BORDER LOOP AREA BETWEEN VK4 AND VK2. OUR VAN WILL AGAIN BE USED AS A COMMUNICATIONS POST.

(2) A PLEASANT SOCIAL EVENING WAS ENJOYED BY MEMBERS AND FAMILIES, AT THE LISMORE WORKERS CLUB LAST WEEK. ANOTHER EVENING IS PLANNED FOR LATE NEXT MONTH... LISTEN TO THE FRIDAY NIGHT VHF BROADCAST FOR MORE DETAILS.

(3) MEMBERS HAVE RECOVERED FROM OUR ANNUAL HAMFEST, HELD EARLY AUGUST, AND ARE STARTING TO THINK ABOUT OUR NEXT SUMERLAND COMPUTER EXPO (NUMBER 8) , TO BE HELD IN THE LISMORE CITY HALL ON SATURDAY 22ND., NOVEMBER.

(4) MEMBERS AND ASPIRING AMATEURS, ARE REMINDED THAT APPLICATIONS . FOR THE NEXT AMATEUR RADIO EXAMINATION, CLOSE ON SUNDAY 27TH.. SEPTEMBER. DON'T FORGET THAT THERE HAVE BEEN SOME CHANGES TO THE SYLLABUS AND ALSO THAT THE FEES HAVE BEEN INCREASED. . CHECK LAST NEWSLETTER FOR DETAILS.

ORANA REGION AMATEUR RADIO CLUB

BI-MONTHLY CLUB MEETING SEPTEMBER 26

The Orana Region Amateur Radio Club Meeting will be held at 8pm in the Scout Hall Talbragar St Dubbo. Thursday 26 September.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Orana Region ARC Club Membe

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE HELD THIS COMING TUESDAY EVENING, 16 SEPTEMBER AT AMATEUR RADIO HOUSE, PARRAMATTA.

THE MEETING WILL BE A SPECIAL SESSION ON SOURCING COMPONENTS AND PARTS FOR CONSTRUCTION PROJECTS.

FIND OUT WHERE TO GET THAT HARD-TO-FIND PART YOU NEED! AN ADDITIONAL ATTRACTION WILL BE THE OPPORTUNITY TO SEE GORDON MCDONALDS LATEST CREATION, A 2.4GHZ TRANSVERTER.

GORDON HOPES THAT IT MIGHT INSPIRE SOMEONE ELSE TO BUILD ONE SO HE WILL HAVE SOMEONE TO TALK TO!

EVERY SUNDAY THE GROUP HOLDS AN INFORMAL NET ON TWO METRES FM AT 11 AM. THE PURPOSE OF THE NET IS TO ALLOW FM-ONLY OPERATORS THE OPPORTUNITY TO CONTACT PEOPLE NOT NORMALLY ACTIVE ON FM AND TO FIND OUT ABOUT ACTIVITIES ELSWHERE ON THE BAND.

TO MAKE THE EXERCISE EASIER FOR ALL CONCERNED, THE NET IS ON THE BLUE MOUNTAINS REPEATER ON 147.05 MHZ, STARTING AT 11 AM. ANYBODY IS WELCOME TO CALL IN AND JOIN THE DISCUSSION. FIND OUT WHAT GOES ON BELOW 144.600 MHZ.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

THE ORANGE AND DISTRICT AMATEUR RADIO CLUB IS APPEALING FOR OPERATORS TO TAKE PART IN A COMMUNICATIONS EXERCISE AT WOODSTOCK ON SUNDAY 5th OCTOBER NEXT, ONLY THREE WEEKS AWAY. (WOODSTOCK IS BETWEEN BLAYNEY AND COWRA).

PLEASE NOTE THAT THE DATE IS SUNDAY THE 5th AND NOT THE SATURDAY, AS ADVISED IN ERROR IN OUR NEWSLETTER.

THIS IS A 24 HOUR HORSE ENDURO EVENT AND WE NEED BETWEEN 12 AND 18 OPERATORS WITH TWO METRE FM MOBILES OR HAND-HELDS. THE MORE OPERATORS WHO ATTEND, THE SHORTER THE DUTY PERIODS CAN BE, WITH A TARGET OF SIX HOURS MAXIMUM PER SHIFT. UNFORTUNATELY, WE CANNOT SUPPLY ENOUGH OPERATORS OURSELVES FROM THE LOCAL AREA SO WE ARE ONCE AGAIN APPEALING FOR SOME FROM OTHER AREAS, INCLUDING PARKES AND FORBES, SYDNEY, LITHGOW AND THE BLUE MOUNTAINS, TO HELP US.

PLEASE NOTE THAT YOU WILL NOT HAVE TO ATTEND FOR THE FULL 24 HOURS AND THAT WE ARE GIVING GENEROUS EXPENSE REBATES.

FOR FULL DETAILS, WOULD YOU PLEASE CONTACT THE ORANGE CLUB'S EVENT CO-ORDINATOR PETER CARTER VK2ETK BY TELEPHONE ON 02 6361 3439 (FROM 9AM TO 9PM DAILY) OR BY PACKET BSS VK2ETK@VK2MJV OR INTO HIS PMS VK2ETK-1 VIA VK2RAO-2.

WE DO NEED YOUR HELP! THAT NUMBER AGAIN: 02 6361 3439.

--Peter VK2ETK for the Orange & District Amateur Radio Club

HORNSBY & DISTRICT ARC. INC.

The next meeting the formal monthly meeting, of the Hornsby & Districts Amateur Radio Club Inc. will take place on the 23 rd. of September, in the Mount Colah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the mhway station.) at 8,.00 pm. This is the meeting where all business for the past month is dealt with, and after the business

has been taken care of, the guest speaker, for this month is Mr. Colin Christenson from the ACA. The main topic of this talk, will be interference, but we can expect to leave the meeting knowing more about interference and where we stand, in relation to interference.

"REMEMBER ALL ARE WELCOME " so come along and find out what it's all about.

Training classes are closed for this year, but for information on classes in 1998 please phone Tony VK2BTL on 9487 3383 and again 9487 3383.

The Club conducts a net every Monday night using the Club repeater VK2RNS., the frequency is 147.250 with a positive offset all are welcome to join the net and listeners tune your receivers to 147.250. Yes! we would like you to join the net or come along to one of our meetings, you

will be most welcome.

If you would like more information about the Club, or its activities write to
HADARC., Post Office BOX 362., Homsby 2077., or phone John VK2WRT on 9807 2490 again 9807 2490.

--John. W. Turner VK2WRT Publicity Officer.

MANLY-WARRINGAH RADIO SOCIETY

This Wednesday is lecture night at the Manly-Warringah Radio Society. Guest speaker this month is Bruce Notting, who runs a video camera and recorder repair business at Newport.

Bruce will be telling us something of the hazards of this trade, and he will
be bringing some bits and pieces; He will also show us the technique he has developed for replacing blown electrolytic capacitors.

The Manly-Warringah Radio Society meets every Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills. As always, doors open at 7:30pm for an 8pm start, and visitors are most welcome.

The club will also be conducting a communications exercise next Sunday morning, in conjunction with the North Side Riding Club at St Ives. Any available operators for this event will be welcome!

-- Richard Murnane VK2SKY, Publicity Officer

GOLD COAST AMATEUR RADIO CLUB HAMFEST 1997
NOVEMBER 8TH 1997

It's that time of the year again when the organisation for the ANNUAL GOLD COAST HAMFEST commences.

The venue for the 20th HAMFEST is again at the ALBERT WATERWAYS COMMUNITY CENTRE on the corner of HOOKER BOULEVARD and SUNSHINE BOULEVARD.

Doors will be open to the public at 9am on Saturday 8th November 1997. Exhibits can be-set up from 7.30am.

The organisation committee wish to take this opportunity to invite you to participate in this annual event by displaying and offering for sale your goods and equipment or just promoting your club and hobby interest.

The charge for exhibitors is $15.00 per table to cover the cost of space and the tables and chairs required. Two free entry passes will be given to each exhibitor.

If you wish to reserve a table or two, please complete the attached Exhibitors Application Form and return it with your remittance to the above PO Box by the 8th October 1997. For any queries please contact:

Rosemarie or Jim on 07 552 -1886 after 7pm.

--Rosemarie Scholz, VICE PRESIDENT

4183. Re: Is radio dying? Only if

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-13 00:00:00 UTC
From: len.anderson@mogur.com
Message-ID: <970912231212784@mogur.com>
Source record: 190480

SR[>From: ham@w3eax.umd.edu (Scott Rosenfeld [NF3I])
SR[>Subject: Is radio dying? Only if YOU let it.

SR[>Ham radio provides a unique experience.

Does it? RADIO has been quite common in most nations since the end of World War II. That's 52 years. Police and fire departments in the USA have had "two-way" radios for 50 years, taxicabs for at least 40 years. There are more commercial handheld transceivers than ham HTs in the USA. Various forms of radios have been shown in motion pictures and television shows for at least 30 years...forms other than CB. The long-running TV cop show "One Adam Twelve" took its title from the drama's unit radio identifier and a radio was a standard tool of police work in that series.

One could try having a PERSONAL two-way radio as unique. However, citizens band radio service on 11 meters has been in existance since 1958. Pleasure watercraft radios might not be such "personal" uses but they have been around for at least three decades, on both VHF and HF. Civil aircraft above the ultralight classes require radio for tower-controlled airport operations and have for over two decades.

SR[>It's sometimes reliable, sometimes not.

That's only for HF where beyond-line-of-sight communications depends on the ionosphere.

SR[>Who will answer your CQ?

SR[>And from where?

A telephone receptionist at Hicksville, NY, (516) 681-2922.

SR[>Can you build a computer from scratch with just discrete
SR[>components, and have it run Windows NT?

I've built two using LSI TTL logic. In 1976. There was no GUI for computer hobbyists back then. But...outside of a large local memory, a CRT controller does not require special hardware to run any graphical user interface. Windows is a PROGRAM set, not hardware magic.

SR[>I can't, even with lots of practical experience with elec-
SR[>tronics and two EE degrees.

Please don't whine about inability to design or solder simple 50 thousandths spacing ICs. Digital circuitry is easier to design and test than analog circuitry.

SR[>They say computers and the Internet are killing radio.

Who are "they?"

SR[>Funny, we wouldn't be HAVING these discussions ABOUT
SR[>RADIO if it werent for computers and the Internet.

Bullshit. Radio-interested people were decrying the CW test back in
the 1960s BEFORE any personal computer existed.

SR[>Remember when you first saw the computer? It was like
SR[>nothing you'd ever seen before. Flashback...

That depends on the age of the observer and what constitutes a
"computer."

SR[>Take a 10 year old kid - who has NEVER listened to a
SR[>shortwave broadcast of the BBC World Service, and never
SR[>heard two people yakking away via HF radio, or satellite,
SR[>or whatever, from opposite ends of the globe.

That would have to be a ten year old from some low-income depressed
area of the country that has no school whatsoever. Radio is
commonplace NOW, found in all sorts of vehicles not involved with
CB...police cars, fire engines, taxicabs, tow trucks, many buses,
delivery trucks, even tractors...also the HTs used everywhere for
short-distance communications in construction, building maintenance,
farming, even movie set operations.

SR[>It's "NEW!" It's "COOL!"

It is? That ten year old from an urban or rural region is well aware
that RADIO EXISTS even if the information is solely from the media.

SR[>Assume that if YOU don't show them, nobody will.

SR[>Make it your duty to show others what you enjoy so much,
SR[>so that they'll have a chance to as well - and thus help
SR[>you preserve what you hold so dear.

What CAN be shown is a PERSONAL radio that can talk to other nations
or a space shuttle. Beyond that, the average U.S. citizen of ANY age
already KNOWS that radio exists, has existed for a long time, and is
used in many, Many, MANY occupations and services. Just don't
pretend this is 1947 with that pep talk. This is 1997.

So does my basement, but that doesn't mean I'd build one of those
antiques today. I can get much higher performance equipment by
using more modern designs. And lots quicker and cheaper too. You
are only fooling yourself if you think 1960 designs are no different
in performance from 1997 designs. Modern designs have a much
higher intercept, much better stability, and can offer razor sharp
brick wall filters with no ringing. You *can* hear the difference.

I have such a schematic around here somewhere....all you need is a
3 stage or more LP filter with a Cutoff of 56 Mhz and a HP filter
with a cutoff of 140 Mhz....one common connection and two I/O ports..
Comet sells one for about 50 US dollars....
(coil/cap values can be had from the ARRL Handbook or the RSGB I would
assume!)

> OBSOLETE.

You are full of it!!! The Jarrell tornado in Texas caused the county's
800Mhz system to go DOWN for 4 hours....the cell system became useless
when it overloaded soon after....the HAMS in the area were praised for
their help and service....I talked with the EOC Manager who confirmed
that without the hams, the county wouldve have had NO communications
worth a damn for almost a full day....

Now take that and shove it up your TDMA cell phone....towers DO fall,
T1 and other lines go dead to cell sites...and when the local
CO bldg gets demolished, you're SOL on ANY phone for local calls
unless the cell folks can do diverse routing LD out of the area and
back..
but that will tax the system in no time...

HI
thanks for the BA info...
here's what I have for Los Angeles

According to my Aeronautical Frequency Directory, and also from spending
lots of time at LAX with my scanner in hand, here are some frequequencies
to monitor
airway shuttle vans 936.1, 935.1
search/rescue 122.9, 123.10
lockheed corp: 3.444, 3.4430, 6.5514, 6.5500
8.8234, 8.8220, 11.3704, 11.3060, 13.3134, 13.3120, 17.9654, 17.9640,
21.9324, 21.9310, 125.25, 123.325, 123.425
LAX Approach 124.5, 381.6 (heading 225-044)
LAX Approach 124.9, 269.0 (090-224)
LAX Approach 128.5, 360.7 (045-089)
LAX ATIS arrivial 133.8
LAX ATIS departures 135.65
lax clearance 121.4, 327.0
Coast Guard 381.8, 383.9
LAX Departure 124.3, 363.2 (045-248)
LAX Departure 125.2, 385.4 (249-044)
LAX ground 121.65, 327.0 North Complex
LAX ground 121.75, 327.0 South Complex
(Between 11pm and 530am All Tower Services: Clearance, Ground, and tower
are usually on 120.95 and UHF 379.1
LAX operations 372.2
LAX tower 119.8, 120.35
LAX tower 120.95, 379.1 (South Complex and nights everything)
LAX tower 133.9 239.3 (North Complex)
LAX Unicom 122.95
LAX vfr corridor 122.75
Rochwell international 3.0054, 3.0040, 3.444, 3.4430, 5.5724, 5.5710,
10.0464, 10.0450, 17.9654, 17.9640,
LAX flight service (Hawthorne) 122.0, 122.1, 122.2, 122.5, 255.4

LAX airport operations
460.525, 460.10, 453.375 Police
Operations 460.55

The following frequencies are licensed or owned by Aeronautical Radio Inc
but are used by various airlines for ground operations and "company"
frequencies
460.65, 460.775, 460.800 460.85 (Continental ramp/maint), 460.875 (UNited
Maintenance, 460.775

Trunked system, shared by several airlines:
856.7875, 856.8875, 857.7875, 857.8875, 858.7875, 858.8875, 859.7875, 859.8875, 860.7875, 860.8875 (Delta, Mexicana, and a few others have been heard here)

460.70 (American), 465.775 (ARCO communications), 460.85 (Continental), 460.70 (Continental), 460.65, (Delta) 460.75 (Delta), 460.775 (Delta), 460.825 (Delta), 460.85 (Delta), 460.825 flying tiger/Federal Express), 460.70 (MGM Grand), 460.70 (Northwest), 4690.825 (Quantis), 460.85 (Quantis), 460.675 (TWA), 460.725 (United), 460.875 (United), 460.725 (Virgin Atlantic), 460.85 (World Airways).

Aeronautical Radio (ARINC) HF/Shortwve frequencies.
5.5754, 5.5740 (HF ramp check)
2.8704, 2.8690, 3.0144, 3.0130, 3.4144, 3.4130, 3.4954, 3.4940, 5.5304, 5.5290, 5.5484, 5.5470, 6.6024, 6.6040, 6.6384, 6.6370, 6.6414, 6.69400, 6.6744, 6.6730, 8.8444, 8.8430, 8.8504, 8.8490, 8.9344, 8.9330, 10.0344, 10.0330, 10.0584, 10.0570, 11.2834, 11.2820, 11.3434, 11.3480, 13.3494, 13.3480, 17.9054, 17.9040, 17.9264, 17.9400, 21.9264, 21.9250

Phoenix Tower 120.7, 118.7
Phoenix Tracon (arvl, deprt) 124.1, 119.2, 126.6, 126.8, 128.65, 120.7,
123.7, 269.5, 256.8, 393.1
Delta 130.10 129.55 460.75, 460.85
America West (Cactus) 131.775, 128.975, 460.525, 935.175, 935.1875
Southwest 856.8875-860.8875 (shared trunked system) 131.70

328.6-335.4 ar ILS Glidepath frequencies
960-1215 are allocated for Navaids..transponders, I think are 1050mhz.
Transponders can also be in the 1300-1350mhz range.
Airport Radars use 2700-2900mhz frequencies!

hope this helps!!
let me know if you find something I don't have listed.
I have also monitored many Cellulatr calls while near LAX and also the Air
fones in the 849-850 and 869mhz area. I believe these are digital signals.

Chris, you scored a direct hit... rarely have I witnessed such an on-target hit of the reasons every-day working Americans are losing their Constitutional guarantees. Most people are fooled into believing that ideology is behind the actions of politicians. As you pointed out, the root cause is money. When Republicans (the party of Richard M. Nixon and Ronald McDonald Reagan) are involved, pseudo capitalism and corporate welfare run rampant.73,
Dennis

There's no one using code on 75m, so your suggestion is useless.
Why not instead listen to the lower 250 kHz of 80m to hear the "filter"
in action?

(That the phone community contains a few nuts just shows that
even the riff-raff can learn the code.)

> designed for. That, to me, is one of the two reasons the no code license is
> good.

> Either it is a stepping stone to getting your full HF priviledges, or
> it is the only license you want and need.

The above sentence seems to subtly support the notion that "no-coders
are less than 'real' hams" (stepping stone to ... full HF privileges) ...

This attitude that "only coded, HF hams are 'real' hams" is pervasive
and destructive ... even when posted in calm tones by folks like RPD910
who don't apparently mean to be aggressively offensive ... it sends a bad
message to everyone from no-code-techs to wannabes to coded hams to
government regulators.

> (Plus you are able to volunteer
> time in an emergency for communications, if you desire.

Possible translation: "you can do public service work that we all will benefit
from, but you're still not 'good enough' to share the HF bands with us
superior,
coded hams ..." sorry, but that's also hypocritical, bigoted bullshit, but far
too
many coded hams still feel that way ...

Perhaps I am jumping on RPD910 for things he didn't intend to say, if so, I
hope
he/she will not take it personally ... but it seems easy to read between the
lines
and see some of the implied meanings that I have suggested ... if RPD910 did
not mean to imply those things, great ... but they ARE still implied (and very
frequently outright stated in so many words) by many "traditionalist" old-time
hams and pro-code zealots ... these are attitudes that are just as destructive
to
our subset of society as blatant racist falsehoods such as "blacks are
inherently

less intelligent than whites" are to our society at large ... they are both derogatory,
false stereotypes that are used to generate discrimination against a particular subset of the human species ... and they are both wrong to practice, repeat, or tolerate ...

It is long past the time for the ARS to recognize that Morse code is merely a recreational relic of the past and does not deserve a separate pass/fail test for
access to ANY amateur spectrum ... if people want to use it they will learn it and become proficient ... if they don't, so what? The world will continue, and more importantly, ham radio will survive ... but continuing the needless barrier of
Morse testing for the sake of limiting the numbers of licensees with HF access and keeping the technical rules so backward as to present significant barriers to
the development, introduction, and use of modern technology in our service will surely result in its extinction before we get too far into the coming century ..

Unfortunately, many older, coded, traditionalist hams seem to feel that the demise of ham radio will not occur in their lifetime and would prefer to keep it
"like it was in the olde days" even if that means it will cease to exist in the long run ... the "C word" (change) is something that they fear and cannot accept.

Peak the received signal, you will find you are then transmitting
exactly on the other stations transmit frequency. I have proved this
with a service monitor generating the other signal several times.

4202. Hallicrafters Skychallenger / National HRO Schematics needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-13 00:00:00 UTC
From: Phillip Franks <pfranks@iol.ie>
Message-ID: <01bcc05a$8c643ba0$bd297dc2@pfranks.iol.ie>
Source record: 190499

I am currently restoring two pre- WW2 communications receivers. I need the schematics or any useful information on the two following radios :

Radio 1:

Maker : National
Type : HRO (number 5)
Year of Make : 1938

Radio 2 :

Maker : Hallicrafters
Type : Skychallenger
Year of make : 1937

Any help on either of these would be greatly appreciated.

Regards,
-

4204. Interface rcvr w/sound card?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-13 00:00:00 UTC
From: kenk@primenet.com
Message-ID: <5vedfk$4d8@nntp02.primenet.com>
Source record: 190501

I just bought a Creative Awe64 sound card. I'm toying with the idea of using this card to get sound from my ham receiver - perhaps convert morse audio to text, maybe even provide some filtering. Later maybe automatic logging. Maybe convert from keyboard to morse for sending.

I realize I'll have to write the program myself. I suspect software may be available to do this but I'd rather do it myself and possibly learn something.

If this is possible, where can I find info on interconnections, the Awe64 API, etc.? I've never written a program to interface with an audio card so this should be an adventure.<g>

IMNSHO, The 'unique' experience has nothing to do with how many "two way" radio's there are or that fact that there are more commercial HT's than ham HT's. The unique experience comes with the UNDERSTANDING of what that VFO is doing and the understanding of how signals propagate, how different frequencys respond to the ionisphere. NOT with keying an HT and talking with someone.

4212. Antique radio tubes

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-14 00:00:00 UTC
From: voicebox@dnai.com
Message-ID: <voicebox-1409970842520001@dnai-204-188-12-144.dialup.dnai.com>
Source record: 190359
Cross-posted to: sci.electronics.repair,sci.electronics.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have an antique AM/SW radio (1941 Philco "model 41-280, code 121") and need to get the tubes tested. The problem is that they are so old that the tube numbers don't show up on any tube tester listing that I've found, except for one that was part of a fellow's antique radio-and-test equipment collection at a local store (now since gone).

Any suggestions? I guess if I could find tube equivalents, I could test them on modern testers (?) Every tube cross-over book I've looked in doesn't have these.

The tubes are:
7A4
41
7C6
7B7
84 (a.k.a. 6Z4)

Also, are there any good mail-order source for these tubes?

Any suggestions would be greatly appreciated. Direct e-mail replies, doubly so.

Thanks.

Enjoy,
Dave

I believe that ham radio gear can be used on the band as long as the
power output remains at the 4 or 5 watts AM (whichever it is nowadays)
and the 12 watts ssb. No other modes allowed.

I thought those books and tests were designed by the ARRL, a bunch of hams. I read them all, and do tend to agree that radio theory is somewhat lacking as a total requirement at a sophisticated fundamental level, but the concepts are there, which is enough to understand how the radios operate.
The information is there, such as what freqs and bands are allowed, and one cannot pass the test without knowing it. However, things such as this are easily forgotten, I know I cant remember all the numbers and have to look them up time to time, and when someone posts a message such as what the freqs are I would just suggest they go look them up again.

In my humble opinion the character of ham radio has changed because the original intent of amateur radio was experimentation with creating, propogating and recieving radio waves. This required building radios, understanding theory to do so, and testing them.
Since a lot of the leg work has been done designing radios that work efficiently, ie we now use integrated circuitry and the like, most ham radio operators are not building and testing, but communicating, and just buy a commercially available transciever, and go on the air. I bet most of the people involved in this thread did not build their radios

from scratch as a good ham should. Furthermore, with the technology today, computerized radios etc, it is next to impossible to do anything more to them than just turn them on anyway.

My point is that ham radio is evolving, and while there always should be a segment interested in down to earth developmental testing (hopefully a very large one), it is not 1900 anymore and things are changing.
Rather than bash the new blood to the hobby, lets share our interest with them so they become us, and do some more work here to further improve radio transmission and reception. We must remember what this was all about in the first place, starting with that first spark gap radio that transmitted across the atlantic, and before. It is all about communication, doing it and improving it, for the good of all and not just a bunch of stodgy hams who think they have exclusive rights to the universe.
So I challange the hams with a problem with the new tests to not just complain about it, but to show where there tests were different (I bet these guys passed the same exact tests), and then to provide improvements to the tests to further the hobby, which is the point anyway. Just complaining is only further evidence of the last one in please shut the door concept. Ham radio doesnt need that. It is not an exclusive club, but an amateur activity designed to improve radio communications through experimentation and testing.

Sorry Bill, that is not correct. Only radios that are type accepted
by the FCC for use there can be used. Mode does not matter, power
level does not matter.

Radios that have been modified in any way lose their type acceptance.
Amateur radio gear is only type accepted for amateur/mars/cap use.

4218. Need help testing antique tubes (SF Bay area)

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-14 00:00:00 UTC
From: voicebox@dnai.com
Message-ID: <voicebox-1409971108180001@dnai-207-33-180-28.dialup.dnai.com>
Source record: 190365
Cross-posted to: rec.antiques.radio+phono,sci.electronics.repair,rec.radio.amateur.misc

I have an antique AM/SW radio (1941 Philco "model 41-280, code 121") and need to get the tubes tested. The problem is that they are so old that the tube numbers don't show up on any tube tester listing that I've found, except for one that was part of a fellow's antique radio-and-test equipment collection at a local store (now since gone).

Anybody living in the SF bay area (I'm in the south penn. area) have a tester that will test these tubes? I'd gladly show up with tubes in hand at your convenience .

Any suggestions? I guess if I could find tube equivalents, I could test them on modern testers (couldn't I?) Every tube cross-over book I've looked in doesn't have these numbers.

The tubes are:
7A4
41
7C6
7B7
84 (a.k.a. 6Z4)

Also, are there any good mail-order source for these tubes? (Someone already told me about Antique Electronic Supply, in AZ).

Any suggestions would be greatly appreciated. Direct e-mail replies, doubly so.

Thanks.

Enjoy,
Dave

Tim,

I would tend to agree with you IF it were not for the sad fact that the
vast majority of today's hams are simply appliance operators who really
DON'T understand "what that VFO is doing" etc.

One of the major problems facing ham radio is that it has shifted from
a community of tinkerers, experimenters, builders, and innovators to a
community of idle-chit-chatters and competitive-games-players who only
use radio as a *medium* for those non-technical underlying activities.

These are the folks who bleat "it's ONLY a hobby!" ... most of them have
little idea how perilous our position will become in the coming few years
as the FCC and the world community try to deal with the huge explosion
in demand for spectrum for wireless services of all kinds ... most hams
think that only the VHF/UHF frequencies will ever face threats, but I am
quite confident that that will not prove to be the case in the coming century.

> http://www.planet.net/adell

Actually, Steve ... I think Len is quite wise and experienced in many areas
and that experience would be an asset to ham radio ... too bad that more
hams don't have his knowledge and skills ...

As far as the comments in the exchange above, I believe Len's point was
to deflate the "Walter Mitty" "I'm a ham and what I do is unique, invaluable,
and incredibility important" self-image that many hams have created to inflate
their self esteem and self-justify the kilobucks they spent on the latest rice
box so they could sit around and belch, break wind, and engage in other forms
of idle prattle (including those involving beeping) with their cronies on the
HF

bands ..

Len's point seemed to be simply that "talking on the radio" is no longer a
"unique experience" and we cannot realistically lean on that act as a
"claim to fame."

Uh oh! Now you've gone and done it! You're used the "H" word in reference to amateur radio. You know what you've done. You've BLASPHEMED the holy words of Carl who has decreed by way of superior flatulence that this is a *service* and *NOT* a "ho---." (I didn't spell it out all the way, since it upsets too many people. Especially Carl.)

After all, it says in verse 97.1 that it's a service. Black and white, etched in stone, and no further discussion. Yet, as Carl shuts the holy book of Part 97, he turns from his podium and hears a voice from far within the crowd, "But master Carl," says the voice, "Do most people become hams because they want to provide a service, or because it might be a fun hobby?"
Carl turns and looks sternly in the direction of the small voice. His only answer? "AMATUER RADIO IS A SERVICE, AND *NOT* A HOBBY!"

Hello,
I've heard mention of "micro-broadcasting" while listening to my shortwave radio. Apparently, it has something to do with ordinary people who legally use very low power to transmit some sort of voice (narrow FM?) signal in their local area.

Do any of you have a list of common frequencies for this? Is it indeed narrow FM - or is another modulation used?

Just curious. Thanks in advance.

It's legal to modify your ham gear and use it on ham bands;
it's not legal to then use it on a band that requires type
acceptance, including the CB band. As I read the rules, amateurs
may NOT use anything but a stock unmodified legal CB rig on
the CB bands. Though if you do, you'll be lonely, IMO. ;-)

Are you real sure that Amateur Radio equipment must be type accepted? If
so please give some reference so I can look it up.

Carl, I feel that your observations are right on the money. Realistically,
I feel this is a natural progression and unfortunately, due to the nature
of the progression, ultimately amateur radio will cease to exist. Times
they are a changin...

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2YQH & WB2RAJ The 59(9) DXReport, NG3K, W3UR & The Daily DX, N4GN, W5KFT, W6RRG, KH7U, N8AC, W9XY, 9K2HN, CT1EGH, G3SWH, G3SXW, G3USF, G4BUE & DX News Sheet, ON6TT, PA3DMH, PA3DZN, PY1KS, VE9DX, VK2ICV and ZL2AL for the following DX information.

5H, TANZANIA (and Zanzibar). Phil, G3SWH, sent OPDX the following update: "Hi there, and thanks for reading this. Just a reminder that I shall be active on CW only all bands from 80 to 10 metres, conditions permitting, between 16th and 22nd September from mainland Tanzania as 5H3/G3SWH and between 22nd and 29th September from Zanzibar Island (IOTA AF-032) as 5H1/G3SWH. I shall be using one of the IOTA Committee's Yaesu FT-900AT transceivers with 100 watts to wire antennas. This is a holiday operation, and activity will probably be restricted to 3 or 4 hours per day. Specially printed QSL's will be available either from my home address:
21 Dickensons Grove, Congresbury, Bristol, BS19 5HQ, United Kingdom,
with SAE and adequate return postage or via the RSGB bureau.
73 and I hope to work you during this trip. Phil G3SWH"

7th ANNUAL W5 DX BASH. The DX BASH will be held on October 3-4-5, 1997 at Lake Buchanan near Austin, Texas. This is a very informal, relaxed, get together for all DX'ers, contesters, antenna nuts, VHF contesters, big guns and little pistols. All are invited. Details can be found at the following website: http://www.dxer.org/w5bash.html. SPECIAL NOTE: OPDX InterNet Subscribers will receive the complete details and press release as an additional bulletin.

9A, CROATIA. The DXNS report Helmut, DF9NW, will be active until September 21st as 9A/DF9NW/P from Murter Island (non-IOTA) which is near Sibenik. It is believed to be on the air for the first time on HF. QSL to homecall.

AM9, MELLILA. "The 59(9) DXReport" states EA9 stations may use the AM9 prefix to celebrate the 500th Anniversary of their town. The length of activity and band operations were not provided.

CY9, SAINT PAUL ISLAND. The CY9DX DXpedition which was to be active from September 12-22nd, had to delay their operation. According to the CY9DX Web page (http://www.dipole.com/cy9dx.html):
CY9DX-NEWS: Bad news Good news: We had to delay our trip because 2m operation is not ready and a couple of important problems have to be solved. The new schedule date is 23 Oct.-02 Nov. '97. Because of this delay we are going to be able to prepare ourselves better. And don't forget CONDX is getting better and better.

D2, ANGOLA. Mr. Dias, CT4KO, will be active as D2AI from Luanda now until at least September, 1998. He will be using a Yaesu FT-920, a Log. beam for 3-30 MHz, dipoles for 40/80 meters and a yagi for 6 meters. Suggested frquencies/modes:

SSB - 3797, 7050, 14202, 18165, 21302, 24925 and 28402 kHz
RTTY - 14085, 18102, 21085, 24895 and 28185 kHz

Also look for activity on RS-12/13 satelite and possibly some scheduled 6 meters operations. QSL via CT1EGH.

HS, THAILAND. Fred, K3ZO, will be active until October 6th as HS0ZAR from a club station. His activity will be mostly CW (but some SSB will take place if conditions are good) on 40-10 meters. Check 40 meters between 1000 and 1300z and 15 meters after 1400z. There will be NO 160/80 meters or WARC bands activity. Special permission is only given for those bands for special occasions. QSL to the bureau or direct via K3ZO.

JY8, JORDON. Bob, W9XY, will once again be going to Jordan to visit with friends and plan to reactivate his call sign as JY8XY during the stay. His arrival date is October 6th, and he will be there until October 27th. There are two stations readily available to him. One is a TS-830 with a Clipperton amp using a TH6 at 60 feet, and wires for the low bands; the other is a TS-830 with TH3 at 60 feet. Please note that overnight arrangements must be made to be able to work the (local morning) openings on the low bands, so check primarily on Friday and Saturday nights for his sunrise openings. Also, there have been some TVI problems in the past, so he will probably not use the amp during evening 'prime-time' hours. Suggested frequencies are as follow:
CW: 1826, 3505, 7005, 14025, 21025, 28025
SSB: 14195, 14240, 21295, 28495

Additionally, please note that Bob will ask local operators to provide more WARC band and RTTY activity as requests for operation for these endorsements have been received. QSL w/SASE to home callsign or via bureau: Bob Johnson, W9XY (ex: WB9YXY), W5514 Grouse Drive, Endeavor, WI 53930.

NEW BOARD OF DIRECTORS. The Northern California DX Foundation is pleased to announce the addition of two new members to its Board of Directors.

They are Glenn Vinson, W6OTC; and Al Burnham, K6RIM. The complete list of Officers and Directors is as follows: K6ANP/President, W6RGG/Vice-President, NW6P/Secretary, W6OSP/Treasurer, K6TMB/Director, K6RIM/Director, W6OAT/Director, W6DU/Director, N6ST/Director, W6OTC/Director and W6ISQ/Director. The Board of Directors receives counsel on various issues from these appointed Advisors: W6WB, WZ6Z, K6KR, N6EK, W6RJ, W6NL, W6RQ, W6CF, K6DC N6OJ and K6KEO. Beacon Project Manager is W6ISQ. Webmaster is K6KR. A bi-annual newsletter, edited by Steve Thomas, N6ST, is mailed to all Foundation members.
The Foundation maintains a library of DXpedition and operating slide and video shows which may be borrowed by clubs for presentation at their meetings. For information on their availability, please contact Ron Steiner, K6KEO, at 3154 Dominic Drive, Castro Valley, CA 94546-1938. The inclusion of an SASE will hasten your receipt of his reply.

Mail may be sent to: NCDXF, P.O. Box 2368, Stanford, CA 94309-2368

OOOPPSS DEPARTMENT. In OPDX.321 there are a few corrections to report. Please note that the callsign for Michael Goode is N9NS not N9NW and the Japanese operator's name is Yuji Yoshitani not Yuhi. Also, we mentioned that the National Contest Journal website can be found at: http://www.waterw.com/~ncj/xpedit.htm
This is NOT the address of the NCJ as a whole. It is the address for Dennis's Contesting/DXpedition home page for the magazine. The magazine can be found at: http://www.waterw.com/~ncj/

OH0, ALAND ISLANDS. The following press release was received by Tim, N4GN, from Martti, OH2BH: "THE SCANDINAVIAN ACTIVITY CONTEST - The famous OH0W contest site was given a complete tuneup during the exceptionally nice summer and the station is now ready for another contest season. The equipment includes the recently introduced, highly advanced, computer-controlled Kachina 505DSP transceiver fed into a multi-directional yagi array. See the Kachina Web Site at: http://www.kachina-az.com for more information.
Finnish Antenna Ltd--the duo of OH1JT and OH2HE--has installed a lineup of monobanders and ferrite broad-band, high-power splitters.

The operating team of Martti, OH2BH, and Jukka, OH2MAM, is now ready to compete against their fellow contesters in the Nordic countries. They welcome all contacts and specifically those semi-rare ones that are always highly appreciated in any contest. Their station is fully equipped to quickly QSY for multi-band QSOs. The station callsign OH0BH will be used as follows:
SAC CW contest Sept 20, 1500 UTC to Sept 21, 1800 UTC
SAC SSB contest Sept 27, 1500 UTC to Sept 28, 1800 UTC

All QSOs will be confirmed with colorful QSLs through OH2BH.

QSL INFO AND NEWS.....
Michael Taylor, NF4W, is interested in being a QSL Manager for a DX station. He works a very limited schedule and has the time and ability

to provide this service. Michael can be reached via E-mail at:
nf4w@mindspring.com

The D25L logs for the IARU HF Championship contest are now available
on the log search WEB-site page at:
http://www.igr.nl/users/pa3dmh/logs/log_search.html
On an added note: Alex, PA3DZN, reports he will be leaving Angola on
September 15th, and heading back to PA-land for about 2 weeks before
taking up another assignment.

Andy, VE9DX, reports their contest station has a Web page up and
running with log search and QSL possibilities. The logs for last
years CQWW SSB and CW contest are there. This has been up and running
for about a year now. The address is: http://www.inetmarket.com/ve9dh/
He also mentions they will again be active and use the callsign CI9DH
for the CQWW SSB Contest, but is not sure yet what the CW call will be
(it will be something 9DH). The page contains photos of the SSB and
CW operation of last year's contest plus a few other goodies.

Roger, G3SXW, reports to OPDX that there has been a change for QSLs
for 1997 5V7A operation. QSLs will now go to GM4FDM and not to GM4AGL
as previously announced. Direct replies can be requested (with return
envelope and postage) via: Tom Wylie, GM4FDM, 3 Kings Crescent,
Elderslie, Renfrewshire, Scotland, United Kingdom or via RSGB bureau.
E-mail requests for bureau replies go to: wylie@colloquium.co.uk
E-mail requests should show: your call-sign, date, time, band. E-mail
acknowledgements are not promised. Any queries about the 5V7A operation
go to: g3sxw@compuserve.com

Hamad, 9K2HN, reports he has just finished with bureau cards (1220
cards for 9K2HN) and they will be in the bureau the Monday after the
WAE Contest. He has also sent out about 350 QSLs for 9K2F via the bureau
last week. If there is any problem, please contact 9K2HN direct via
his E-mail address at: 9k2hn@moc.kw

R1, ANTARCTICA. Valentin "Wally", R1ANZ, is active from Mirnyy Base in
the Antarctica around 14190 kHz after 0330z (short path to U.S.). Also,
check around the same frequency around 1130z (long path to the U.S.).
He has also shown up on 40 meters CW around 1000z. QSL via RU1ZC.

S9, SAO TOME. The DXNL reports that Hugo, S92AF, hits the airwaves on HF
and RS12 from September 17-30. He may also activate Principe (AF-044).
QSL via his homecall HB9AFH.

SO, WOLIN ISLAND (Update) As we mentioned last week in OPDX.321, a German
group will operate as SO5OE/1 from this Polish island starting around
2000z on October 3rd, and last until October 6th. OPDX has now received
the list of operators which include: DK20E/Mike, DL7IQ/Birgit, DL7IO/Holger,
DL7VRO/Fritz, DL7VYL/Gerda, DL7UBA/Roy and DL1YFF/Hans-Juergen. QSL via
DL7VRO.

"WHO'S WHO ON THE TOPBAND". Nicholas, VK2ICV, states check out the
following WEB site: http://www.watch4you.com/160

ZL7/ZM7, CHATHAM ISLAND. This island will be activated October 22-27th, on all bands by a team from New Zealand. There will be four stations active most hours of the days and on most bands. During the CQWW SSB contest, the callsigns to be used will be ZM7A and ZL7AA. These callsigns will be used for the few days before and after the contest. The team will consist of: ZL2AL, ZL2HU, ZL2TT, ZL2ST, ZL2RR, ZL2LF and ZL2GI (YL op). Some of the operators are part of the team that activated ZL8RI last year. CW will be not be used during contest time. Yagis will be used and WARC bands will be activated. There is no Commercial sponsorship of this DXpedition. Costs are borne by the members of the team. QSL ZL7AA and ZM7A via: Lee Jennings, ZL2AL, PO Box 54, HASTINGS 4201, NEW ZEALAND or via ZL2AL CBA or bureau.

ZV1/ZW1/ZX1, ILHA GRANDE ISLAND (Brazil). This Brazilian island (IOTA SA-029, DIB 11) will be on the air from October 3-5th. Three operators will be active on CW/SSB, 80-10 meters plus plus 6 meters and VHF. It is important to pay close attention to the callsigns being used. Look for ZW1A to be operated by PY1OB/Fabio (SSB). Also look for ZX1A to be operated by PY1SL/Soni (CW) and ZV1A to be operated by PY1JH/Campos (6 meters, VHF and UHF). QSL ZW1A, and QSOs made with ZV1A on SSB via PY1OB's CBA or via Labre-RJ, P.O. Box 58, 20001-970 - Rio de Janeiro - Brazil. QSL ZX1A, and QSOs made with ZV1A on CW via PY1SL's CBA or via Labre-RJ, P.O. Box 58; 20001-970 - Rio de Janeiro - Brazil.

ZW2, ILHA DAS COUVES (COUVES ISLAND, BRAZIL). Look for activity by ZW2E from this Brazilian island (IOTA SA-028, DIB 70) during October 8-12th. Operation will be on 80-10 meters CW and SSB. Check the usual IOTA frequencies. QSL via PY2YW.

4230. TV-2 TUBE TESTER WANTED--TIRED OF USING IT?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-14 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <5vhmer$88d$6@csu-b.csuohio.edu>
Source record: 190377

TV-2 Series military tube tester wanted. Maybe you're tired of all the settings to test a simple tube and I can provide a decent easy and quick to use replacement unit as part of the deal for your TV-2 if you wish.

I am not a dealer, but an old full-time student trying to get out of school before social security sets in :) I have become fascinated with tube testers and wish to collect them as strange as that sounds to use with my collection musical instrument amps of that I have gathered over 30 years. In reality all anybody really needs is one basic Gm unit-nothing more if you think about it. I realize this.

I am long on things to trade (some very nice valuable goodies in various categories) and short on cash--hopefully we can perhaps work out some combo of things to swap and/or straight cash. Actually, if you decide to swap in some form, you'll come out far, far ahead of the pittance that dealers will offer you for a unit when they buy a TV-2 considering the value of some of the goodies I have to swap if you can use same.

Please, no dealers--as a full time student doing this as a hobby with my wife rightfully watching my toy expenditures, I cannot afford any tube tester that has suddenly become solid gold after it has been purchased for a pittance. I am not being critical--I realize dealers are in business to make as much money as possible with caveat emptor.

Thank you.

Okay smart guy, speaking strictly of amateur radio--
Commercially manufactured amateur radio gear must be FCC type accepted
in order to be sold and used in the U.S., its territories and
possessions. Homebrewed equipment does not qualify as commercially
manufactured equipment and is exempt.

Part 97 only refers to type acceptance of external RF power amplifiers
capable of operation below 144 MHz, but Part 97 is only a piece of the
big picture.

Nope! thats not it! What they mean is transmitting on the AM/FM
broadcast band at low power levels. This is NOT legal. But its done
all the time by a good many people. Check out alt.radio.pirate for the
real information on the subject.

I just looked in the 1997 ARRL Handbook, page 29.2 where it gives the definition of Type Acceptance. It says that Amateur equipment does not require type acceptance although HF power amplifiers and amplifier kits do.

The last part of that definition is true. The first part is not true where commercially manufactured amateur equipment is concerned.

Either that or someone was lying to me when I worked full-time in the industry.

I agree, but that's not what I said. The original question was about using
CB gear on 10 meters, and my recollection is that if a ham makes the
modification it's OK (type acceptance notwithstanding) under the same rule
that allows home brew equipment. I said nothing about anything to do with
transmitting on 27 Mhz.

I don't have the rule book, but the bottom line is that a commercially
manufactured rig must go through FCC type-acceptance.

>Are you real sure that Amateur Radio equipment must be type accepted? If
>so please give some reference so I can look it up.

Please see FCC URL below...

Okay. okay....."Certified for use..." My most humble apologies where
they apply.

Section 302 of the Communications Act of 1934 had the wording changed
recently.....I hate when that happens.... ;)

Type acceptance is an equipment authorization issued by the Commission
for equipment to be used pursuant to a station authorization (i.e.,
in authorized radio services such as commercial and private land
mobile radio services). Type acceptance is based on submittal of a
written application that includes a complete technical description of
the product and a test report showing compliance with the technical
requirements. This procedure has been used for most equipment
operating in the "authorized" radio services (i.e., including those
licensed individually or covered by a blanket license or rule).

Certification is an equipment authorization issued by the Commission
for equipment designed to be operated without individual license under
Parts 15 and 18 of the rules. Certification is based on submittal of
a written application that includes a complete technical description
of the product and a test report showing compliance with the
technical requirements. In this regard, the process is very similar
to type acceptance, however, the nature of the technical requirements
for equipment operated under Parts 15 and 18 tends to differ
significantly from the requirements for equipment used in
authorized radio services.

...Equipment that has been certificated or formerly type accepted for
use in the Amateur Radio Service pursuant to the requirements of Part
97 of this chapter may be modified without regard to the conditions
specified in Paragraph (b) of this section, provided the following

conditions are met...

See:
http://www.fcc.gov/Bureaus/Engineering_Technology/Notices/1997/fcc97084..txt

This still in no way means amateur equipment can be used on 27 MHz
band frequencies.

Your tubes are not particularly unusual and almost any tester should be
able to handle them, so I am surprised you are having trouble. If all
else fails, Antique Electronic Supply will test them for a nominal fee,
but you have to pay shipping both ways. You may want to order a complete
set of replacement tubes since you will need them sooner or later
anyway. You can then substitute your tubes, one by one, with the known
good ones and by process of elimination find the bum tube.

Hope this helps!
Charlie

4241. FT-51R Help Needed, Plse.

Newsgroup: rec.radio.amateur.misc

After doing wide open mods and undoing them, my FT-51R is stuck in Euro mode. I know that I can get very wide band TX/RX if I unsodler (again) the pad and resetting. Problem is, my software won't load into the radio if I do that. Is there anyone out there that can tell me how to get my HT back to normal USA mode without sending it to Yaesu? VHF shows band 5, and I no longer have band choices. Can anyone help. Thanks, Scott (KB5YOK)

Carl R. Stevenson <wa6vse@fast.net> wrote:

>I would tend to agree with you IF it were not for the sad fact that the
>vast majority of today's hams are simply appliance operators who really
>DON'T understand "what that VFO is doing" etc.

Why is it necessary? Two of the most important activities of ham
radio are public safety and international goodwill. Basic technical
skills, akin to hooking up the VCR to your television, are needed
to fulfill these goals.

>One of the major problems facing ham radio is that it has shifted from
>a community of tinkerers, experimenters, builders, and innovators to a
>community of idle-chit-chatters and competitive-games-players who only
>*use* radio as a *medium* for those non-technical underlying activities.

This has been happening for years. I've been around ham radio for 15
years, and it was happening back then. You constantly accuse the pro-code
camp of being "afraid of change" in adopting digital modes. It would seem
that it is you, Carl, who is afraid of change in the face of amateur radio.

>These are the folks who bleat "it's ONLY a hobby!" ... most of them have
>little idea how perilous our position will become in the coming few years
>as the FCC and the world community try to deal with the huge explosion
>in demand for spectrum for wireless services of all kinds

Looking through my magazines, I don't see any articles from Carl Stevenson.
I guess Carl needs to revise that "idle-chit-chatters..." statement to
include "USENET bitchers" too.

There are other people that can test your tubes for you. I'm one (Oakland), John Wentzel of Aladdin Radio in San Francisco is another.

There are a number of places to get tubes. At the bigget CHRS swap meets there are always tube sellers. Also, there are a few people on the internet that have tubes for sale. You can find their URLs at http://www.antiqueradios.com/resources.shtml

Source record: 190393

I need to know how to modify my Standard C158A VHF Ham radio so it will have extended recieve, and extended transmit, and/or have MARS/CAP capabilities. I would also like to know as much extra inof as possible. I am a beginner, and I want to learn as much about this radio as possible, so if anybody out there has any misc. info on this model it would be greatly appriciated.

I am in the North Bay Area, so doubt I am much help for testing, but
another
source for tubes (much closer to you) is:

Alltronics
2300 Zanker Road
San Jose, CA 95131

(408) 943-9773

Ask for their catalog.

Sorry! You need a license from either your home country or the country
which is sponsering the area of Antartica you are operating from or the
host country(USA or Russia) for space operation. Unless you catch a lift
from France or Japan on one of their launch vehicles.

I bought a 79A and quickly returned it. There is no way that rig can handle
the "average" duty cycle of a "typical" ham rag-chewing with 5 watts out.
Heat dissipation seems inefficient enough unless you want to see $400 burn.

FTV (now in Version 1.0)can be used to receive images from Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software. The main features include:

WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

You may get more information or download a copy from my web site, on
http://www.geocities.com/SiliconValley/2504

There's an electronics store in Berkeley that sells tubes. I think it's Al
Lasher's, 1734 University, 510 843 5915. I also think they may have a tube
tester, but if they don't, they should be able to point you to one.

4255. FS: HF Amateur Equipment - Kenwood TS-850S AT

Kenwood TS-850S-AT HF amateur radio transceiver. Like new with manual and original accessories. Packed in original box for past 2 years (moved to an apartment). Photo and specs available upon request.

Kenwood SP-31 Matching external speaker

Kenwood YK-88SN-1 1.8 KHz SSB Filter for 8.83 MHz IF

G.A.P. Challenger DX-VI Antenna. Coverage: (80m, 40m, 20m, 15m, 12m, 10m, 6m, 2m) vertical.

HeathKit HD-1410 Electronic Keyer.

BK 6 Position Antenna Switch.

Bearcat 300 - 50 Channel Scanner. Programable.

Package Price: $2,000 Canadian. TS-850, SP-31 and YK-88SN-1 offered complete only. Will not split it up. Reasonable offers may be considered.

n.b. Scanner now working but has an intermittant problem. Occassionally (every several months) it will stop working. When unplugged for a period of time, it will resume functioning.

A pretty accurate list, I'd say ... many technical hams have such workbenches.
Many others can occasionally borrow a missing piece from the above list from
a friend or place of employment (with the employer's knowledge and permission,
of course) ...

Of course, those who have no interest in, or commitment to, the technical side
of ham radio will whine "It's too expensive!!!!"

The above response is typical pro-code ...
in essence: "You don't like the rules? Get stuffed.
The rules are unchangeable, must always remain
as they were in the past, and besides, we don't
want 'your kind' on 'our' bands because you want
change."

This sort of narrow-minded, stagnated, bigoted
attitude is exactly what I was railing on and exactly
why the rules DO need to be changed ... so we can
get more people who actually have a functioning brain
involved in ham radio and ensure its survival, rather
than saying "I got mine; you get stuffed" and trying
to pull the hole closed behind us so as to avoid any
change or progress ... in other words, it's a subset of
NIMBY, nothing more ...

Hi Joe
I must admit, I tend to agree with you. I have been an amateur since the mid 60's. I have found that most of my friends are either amateur or workmates. I have often found that my amateur friends don't ask me 'what is it in for me' when I ask them for something but my non amateur friends will. They may be joking but it is still in they voice.
Of course, I have done a lot of amateur volunteer work so most of my amateur friends tend to assume that my request may be volunteer related.

I am speaking to anyone who cares to listen as a soon to be new ham. (Technician Class) I am attracted to the hobby because I love electronics and radio. I am an Electrical Engineer by schooling (BSEE, Marquette U, 1994) and a computer network engineer by career training. I used radios extensively in my part time college jobs (Security and public safety) and obviously I spent a lot of time around electronics. I miss that stuff and I see amateur radio as a way of getting back to it. I am sure there are a lot of people like me who want to get started. However, a quick read of this and other newsgroups may turn off some of the potential newcomers. The code/no-code arguments, the cb vs. ham fights, and the severe cases of "my way or the highway" are enough to make an outsider think twice about joining your ranks.

I have met a few hams in person who have assuaged my fears, but I still have reservations. It seems to me that ham radio should be an environment where everyone contributes for the good of all and the hobby itself. I think you can be big enough people to realize that all things have there place. (CW, phone, packet, rtty, sat, whatever) If you want to learn it, fine. If not, fine. Berating those who choose to learn different areas from yours seems counter-productive. In short, live and let live - except when it comes to freebanding and malicious acts of interference and the like. If you are to attract more newcomers to the hobby, some attitudes need to change. I will enter the hobby as a technician no-code. It annoys me to know that I will meet those who feel that I will not be a real ham. I am a computer genius and expect to get into satellite and packet radio. I am also an electrical engineer, who plans on designing and building circuits and antennas. I will not jump all over those who choose not to do these things.

I hope that the bad things I have mentioned are the exception rather than the rule. I suspect that this is the case. If ham radio is to survive, it will need more operators and a large constituency to fight for its rights in the coming age of "wireless everything". The few apples must not be allowed to spoil the whole barrel.

I suspect I may get some replies to this post. Radio people are an intelligent bunch and I trust that most of you will know that I am not talking about you when I say "bad apples". Take care and may your present and my future hobby survive!

Looking forward to giving a call sign,

-Greg

Greg, don't take what you see in some of these newsgroups as in any way indicative of the general behavior of hams. This is Usenet, not ham radio, and the people who are making you cringe are to be found on most unmoderated newsgroups. The amount of invective here doesn't represent hams in general any more than the amount of invective on say, comp.infosystems.www.authoring.html represents HTML authors in general!

>QUESTION #1: Should I go to the library and check out a book on basic radio wave
>theory and basic electronics?

If you know and understand the electric/electronic theory then
you shouldn't have any problem. The question pools for Novice
and Technician were expanded as of 7/1/97. That has already
happened.

>Question #2: How much will a basic UHF/VHF set-up cost me (transceiver, SWR,
>antenna, coax)? If I can find a ham meet near me, how much would used equipment
>cost?

This really depend on what you want to do. You can get a simple
2m FM transciever for $200-$300 and be ready to go with just
a simple 2M antenna.

>Question #3: Where can I go to get a list of what UHF/VHF transceivers are out
>there, and which ones to avoid?

Start buying the amateur magazines like QST, CQ or the CQ VHF
magazine.

>Question #4: I live on the top (i.e. third) floor of an apartment building with
>a small balcony. Is it realistic to try to wire up an antenna, on the balcony or
>should I get an HT for the time being, until I move into a house?

There are many effective small antennas for VHF work that can
be set up in an apartment window/balcony.

>Question #5: I'm really interested in packet radio. What prices (new and used)
>can I expect?

Same as above, but you'll eed the interface equipment for
the setup to your computer.

I have been involved with Amateur Radio since 1959. It has been a passion all my life and lead to my degree from Purdue. Since the late 1970s with the avent of the Bash books, I have heard nothing but trash talk about new hams. The hobby has become more like a social frat than a service organization. Too hams here in Lafayette do not want anyone in the hobby that they did not personally bring into it. We have 500 hams in the community but no one ever just comes back to just say "Hi". People talk to only those in their cliche. I am tired of it.

I am a missionary for amateur radio. I have bought folks who have Ph.ds in Electrical Engineering (including a professor of EE). I have ran no code classes that were made up of students getting degrees in engineering, physics and the sciences. I am tired of people putting everyone down. When I first got interested, hams were excited. They wanted me, they helped me. Now they make fun of new people.

100% incorrect. I am sitting with the Azden corporate announcement in
front of me. It says that Azden is ONLY dropping ham radio sales in
North America. Sales of their ham gear WILL continue elsewhere.

I would have to say that it's totally subjective.

I am most interested in conversations in which I am a party.
I am often not interested in conversations in which I am
not a party.

Seems there's room for everyone, doesn't it?

>classes that were made up of students getting degrees in engineering, physics
>and the sciences. I am tired of people putting everyone down. When I first
>got interested, hams were excited. They wanted me, they helped me. Now they
>make fun of new people.

Hams are people. Not all people are hams. All people have opinions.
Not all hams share the same opinion...

I think if you named, in your head, the people that put down new hams
and then you counted their numbers and divided that into the total
active ham population...in the result you would find an overwhelming
vast majority of hams do not share or practice the negative opinions
or attitudes of that very small group.

I think we are dwelling too much on the negative aspects of amateur
radio. I can't say that ALL of my own amateur radio experiences have
been pleasant but I am still in the hobby/service because it is in me
and always has been. I think there are those who have amateur radio
in them and then there are those who are just in amateur radio...it's
fairly easy to tell one from the other.

Bottom line: Why are we being so thin skinned that someone else's
opinions or attitude affects our own to the point that we look at
amateur radio (as a whole) as being bad? Doesn't make sense.

I really don't want a bunch of negative thinking people in my hobby.
What kind of service can they provide when they're really needed?
Instead of helping during emergencies, will they be the ones who do
nothing except critique those who are working, saying what they would
have done it differently and their way is better?

Amateur Radio is hams helping hams to help others. This is not
reflected in any way, shape, or form in any internet newsgroup.

You can talk about fire. You can describe it. You can see it. You can see what it does. But unless you actually touch it, you'll never know how it feels.

Ham Radio....it's an adventure. >CLICK<

Kenwood Sale: All excellent condx, with manuals, original boxes.

Kenwood TS940SAT w/ IF10B, YK-88C 500Hz CW/FSK Filter, 100watts
output continuos duty. Variable digital display bandwidth,NB, AF filter VAR
IF
Built in Antenna tuner, Computer interface and internal PS 120/60
Asking $1275.00, will ship UPS in Original carton.

Kenwood TL922A 1KW amplifier with 10 Meter option installed.
2-350Z's 2KW PEP, IKW -CW
Asking $1000.00, can ship but prefer pickup.

Kenwood SM220 monitor scope with Pan Adapter - Asking $285.00

Tokyo Labs 1KW all band Antenna Tuner w/built in Watt/SWR meter
and 4:1 balum. Covers 160=10m. Asking $225.00

Can be reached at 407-260-8752 or at e-mail rwalters@mailhost.magicnet.net

Will respond to all inquires. 73's Ron - W4LDE

When did this change? It used to be that even a Novice could modify equipment
to operate on the Ham bands.

: > p.piercey@thezone.net
: > VO1HE@VO1AAA.#ENF.NF.CAN.NOAM
: > ========================
: I believe that ham radio gear can be used on the band as long as the
: power output remains at the 4 or 5 watts AM (whichever it is nowadays)
: and the 12 watts ssb. No other modes allowed.

Wrong. Ham gear is NOT type accepted for the CB band, so is illegal.

Yes, this is exceedingly common. Folks who want to become
"micro-broadcasters" buy baby monitors, cordless phones, and cellphones.
Each such broadcaster typically has a half-dozen or so listeners
who are kept entertained in their neighborhood.

Among the most popular broadcasts are local politicians, government
and school employees who regularly make their entire personal lives
available to whoever may want to listen. You may have read about
how Newt Gingrich recently opened his own station.

Sounds like some people need to read part 97 and part 95 of the FCC
rules and regulations.
Then they would understand the difference between the two radio services
and that Amateur radio operators are allowed to build and modify
equipment for the ham bands only and not to use on the Cb band.

Using Ramsey FM-10 under Part 15 is LEGAL to transmit on the FM band.
Those using MODIFIED FM-10's, amplifiers etc. then would exceed the
power levels allowed under Part 15 and would then be ILLEGAL to use
MODFIED/AMPLIFIED/EXTERNAL ANTENNAS etc. to transmit on FM with out am
FM broadcast license under Part 73.

Don't classify all FM-10 & similar devices as illegal. Many such
devices are on the market to relay portable CD audio your car stereo
etc.. These devices when used PROPERLY are LEGAL.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sept. 21st, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

4297. Yaesu FT5200 problems

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-15 00:00:00 UTC
From: "Gary R. Hoffman" <gary@carcs3.wustl.edu>
Message-ID: <341D2B72.41C67EA6@carcs3.wustl.edu>
Source record: 190316

I have a Yaesu FT-5200 dual band (2m - 70cm) radio mounted in my car. There are two external speakers attached, one for each band. I've noticed that when I transmit on one band, I hear noise (sometimes a LOT of noise) on the speaker for the other band. Most often, I hear the noise on the 70cm side when I transmit on 2m.

There is a similar radio in my wife's car, and she reports the same symptoms. We had been using cellular look-alike on-glass Midland antennas, but recently swicthed to MFJ magnetic mount cellular look-alike antennas. We really noticed the problem after the switch to the MFJ antennas, but after some experimenting, I found that the problem was also present when I used the on-glass antenna... it was just less pronounced.

I tried moving the mag mount all over the car and even removed the glass mount (well, I unscrewed it), but nothing helped.

I doubt that I'm picking up RF on the speaker wire, since I still hear the noise if I just use the FT-5200's internal speaker.

Is it possible there is a flaw in the FT-5200 design?

Is it possible I installed the radios improperly?

Someone suggested making sure that the radios are well grounded, but there doesn't appear to be any good place on the radios to attach a ground wire (not that I can see, anyway).

Any suggestions, comments, or flashes of insight would be appreciated.

Thanks.

Gary KB0QGE gary@carcs3.wustl.edu

Not if you exceed the "field strength" requirments. And with a tunned dipole you will. You can run 1Kw on the FM broadcast band as long as its into a good dummy load. Hook an FM 10 to a beam with a nice 8 Dbd gain. You'll hear it for a mile. The FCC wouldnt like that....73

If your call is N5FX, BOY are you lucky!

I saw this bit on DC's WTTG NewsChopper 5, which
they've just purchased (like the big boys in LA).

They did a 10-minute piece on it on Sunday morning;
emblazoned CLEARLY on its side is its FAA ID:

N5FX

Pretty cool, huh? If your call happens to be
N5FX, you've got the makings of a pretty cool
QSL card.

Check with ALLTRONICS in San Jose. They sell old tubes and may be
able to check with the testing. Otherwise buy a set and swap one
at a time till you find the bad one. Or put all new in and then
swap one at a time and find all the bad ones.

Hello all,

Having recently started vhf dx I'm after a source for beep tone kits, you know, you de-key the mike and a beep is transmitted. Pretty good for marginal conditions which is most of the time with 2.5 watts! I'm after the straight beep, nothing fancy like a K tone, and preferably one that goes inside the mike.

CHECK THE GROUND ON THE RADIO. I suggest a separate ground (short
leads) from the radio. In addition check the ground on the antenna
connector (pl-239). Make sure it is soldered. I think your problem
is here.

Actually, I haven't had an interesting contact in about 7 or 8 years. But I will gladly tell you of the last one I had.

The name and callsign of the gentleman are buried deep in the pages of a logbook, but I can tell you that he was (is) French Canadian from Montreal. He and his family came to Canada shortly after WWII from Belgium. After the usual idle chit-chat about rigs, antennas, and weather, the conversation turned to his talking about how he came to Canada. He told me how his family helped some jewish families escape the holocaust while he was in Belgium. The Nazis suspected them, but nothing was ever proven. Because of this, his entire village was subject to random searches and harassment by Nazi soldiers. The pressure became too great, and so when he and his family got the chance, they left to Canada.
Around the late seventies, he decided to return to the village of his homeland. He had hoped to meet old friends and family that he hadn't seen in years. However, when villagers who knew him found out who he was, instead of welcoming him back with open arms, he was greeted with, "Why didn't you cooperate with the soldiers? They would have then left the rest of us alone!" He vowed then to return to Canada and never return to his homeland.

This conversation took place on a frequency that is notorious for jamming and obnoxious behavior. However, not one jammer or "QRMer" took the airwaves while this man was talking to me.

...and that is the only interesting contact I've ever had as a licensed ham operator.

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated August 10, 1997

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

SEPTEMBER 1997

Sep 7 (Sun), Joliet, IL - Bolingbrook ARS. Inwood Recreation Center, 3000 W. Jefferson St (Rt. 52), Joliet, IL Admission $5. Outdoor flea market on paved parking lot. Indoor reserved tables. VE testing 9 AM - noon, bring original license and photocopy. Talk in on 147.33 (+600 kHz), 224.54, and 146.82 (-600 kHz). Table Info: Ed Weinstein, WD9AYR, (630)759-7005.

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen County AR Technical Society. Admission $5. Parking $2. www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

>There is NO type acceptance with amateur equipment.

The receiver of a commercially-built amateur transceiver has
to be type-accepted to insure it meets Part 15 emission standards.
Look on the back of any transciever - you'll see the Part 15 TA
sticker.

Give us a break, Mike! it is necessary because ham radio is
chartered primarily as a technical service, despite your protestations
to the contrary and the ARRL's perversion of it into a medium for
competitive games ...

> >One of the major problems facing ham radio is that it has shifted from
> >a community of tinkerers, experimenters, builders, and innovators to a

> >*use* radio as a *medium* for those non-technical underlying activities.
>
> This has been happening for years. I've been around ham radio for 15
> years, and it was happening back then.

I've been a ham for nearly 25 years and it was happening then, too ...
it's getting worse and worse as the decades go by with the ARRL
promoting gamesmanship over technical competence and striving at
every turn to thwart progress and modernization in the technical areas.

> You constantly accuse the pro-code
> camp of being "afraid of change" in adopting digital modes. It would seem
> that it is you, Carl, who is afraid of change in the face of amateur radio.

No, Mike ... you clearly don't understand ... I am afraid of the *lack* of
change in our technology and the perverse change in what ham radio is
perceived to exist for ...

> >These are the folks who bleat "it's ONLY a hobby!" ... most of them have

> I guess Carl needs to revise that "idle-chit-chatters..." statement to
> include "USENET bitchers" too.

I've written quite a few technical articles ... none for QST, since QST is a
distinctly non-technical publication ...

Try 6955 khz plus or minus about 20 khz most evenings.
Seems weekends are best for catching pirates.
As for local FM look all over the dial during the evening or night.
Most FM pirates are low power and aren't heard as far as legal
broadcasters.

>Nope! thats not it! What they mean is transmitting on the AM/FM
>broadcast band at low power levels. This is NOT legal. But its done

I think the Lincoln is the the non-U.S. version of the HR-2510. Try
searching for info on the HR-2510 and the info you find will most
probably be the same or similar for the Lincoln.

This is a best guess... I haven't owned a Lincoln, I have just seen a
picture of one (an HR-2510 with some colored buttons).

One minor correction....make that "refuse to give an incorrect address".

Like anyone would give RS their correct address !

The following is a QST

ORACLE begins lobbying telecommunications lawmakers worldwide to abolish Morse code testing and MARCO says it is willing to validate U.S. handicapped Morse code waivers. These stories and more on Newsline report number 1047 coming your way right now.

(*****

ORACLE: NO MORE MORSE CODE WORLDWIDE

Calling Morse code testing of candidates for ham radio licenses a restrictive practice, a small but vocal New Zealand based anti CW group has begun a new worldwide political lobbying campaign to end code proficiency testing. ORACLE, an acronym for the Organization Requesting Alternatives by Code Less Examinations has now sent formal letters to the telecommunications regulatory agencies in sixty-four key countries. Letters asking these agencies to support ending the manual telegraphy requirement in Amateur radio licensing.

For those of you who are not aware of ORACLE, this is the group that literally out-foxed New Zealands' long established national ham radio society on the Morse testing issue. The New Zealand Amateur Radio Transmitting society has long been a proponent of retaining code testing. But ORACLE was successful in getting that nations Ministry of Communications to take a position in favor of eliminating the ITU rule that makes CW testing mandatory for access to bands below 30 MHZ. New Zealand now favors a rule that would permit each nation to decide if Morse testing was needed for any ham license.

Now ORACLE has taken its campaign to abolish Morse testing international. In its August 13th letter, ORACLE says that it is seeking the support of telecommunications administrations worldwide that are involved in updating international radio regulations for the Amateur Radio service. Its multi page letter -- which appears to be more of a formal presentation -- states in part that proficiency in sending and receiving texts in Morse code has not been a genuine international licensing requirement for many year. Rather, ORACLE calls it a restrictive practice aimed at limiting participation on frequencies below 30 MHZ.

The letter goes on to say that ORACLE believes requiring candidates to demonstrate proficiency in a subject that is not a genuine requirement constitutes a form of discrimination. It says that the folly of current

Morse testing regulations is illustrated by the policy in some nations to grant waivers to persons with disabilities. ORACLE says that this is in effect a form of reverse discrimination. The group says that granting such waivers shows that Morse testing can be considered expendable in some cases and therefore cannot a valid international requirement. Oracle also points to a United Nations document titled an International Covenant of Civil and Political Rights to back its position.

A detailed account of what ORACLE is doing to eliminate Morse testing on a world-wide basis appears in the September 1st issue of the W5YI Report beginning on page 1. You can also find it on our website at:

www.arnewsline.org

(Via ORACLE, W5YI Report)

(*****

MARCO - SECOND OPINION ON MEDICAL CW WAIVERS

MARCO, the Medical Amateur Radio Council says that it can put an end to most abuses of the Morse code medical exemptions plaguing the United Stares ham radio licensing system. Ira Wexler, W3HEF, the president of MARCO is reported to have offered the groups assistance to help validate these medical exemptions by providing volunteer physicians to scrutinize these requests.

According to Wexler, at a recent MARCO meeting in San Francisco, there was considerable discussion of possible abuses of the medical exemption process. As a result, MARCO has offered to become a consultant to any VE team who would like to get a second opinion on a medical exemption request.

Wexler says that MARCO has the necessary volunteer physicians to investigate and evaluate all medical Morse exemption requests. It will be up to the FCC to decide if it wants such a service if or when MARCO files a formal rule making request.

(Via W5YI Report)

ITS A TECHNICIANS WORLD

Meantime, Technician class hams appear to be on their way to taking over the world of Amateur Radio. At least they are here in the United States.

This not so surprising revelation comes to us by way of a survey of ARRL Volunteer Instructors. It shows that most teach between one and two classes a year and the vast majority of students obtain only their Technician class tickets.

The ARRL survey revealed that classes average eight students. Graduates are 5% Novice, 88% Technician, 5% General, 1% Advanced, and 1% Extra.

No distinction was made in this ARRL survey between the codefree Technician and the Tech Plus license holders, but published statistics show that some 88% all new hams enter as no-code Techs. The numbers also say that very few ever bother to upgrade.

In another League conducted survey, ARRL registered professional school teachers reported that their students' favorite ham radio activities are High Frequency DXing, taking part in licensing classes, radio club activities and VHF and UHF operating. The 108 teachers who returned their surveys say they introduced nearly 8800 students to ham radio.

And there is quite a difference in the way ham radio is introduced in the schools verses the way it's taught in the private sector. The teachers said that about 60% of their licensing classes prepared youngsters for the Technician license and 40% for the Novice ticket.

Volunteer Instructors and ARRL registered school teachers were polled last spring for these surveys.

(Adapted from ARRL Letter and FCC and W5YI Licensing Data)

(*****

LETS MAKE A DEAL

The FCC has taken action in terminating an unlicensed radio station operation in Fort Walton Beach, Florida. The way it was done sounds like an episode of the TV show "Lets Make a Deal!"

The day after the music died on 89.9 MHZ, the request line was still ringing off the hook. But there was no way to play those requests because the Ft. Walton Beach pirate stations' owners has already surrendered their stereo transmitter to an FCC Engineer an a local sheriff's deputy.

The owner, identified only as Alan in newspaper accounts, had an antenna up a Pine tree behind an apartment building and claimed to be running 40 watts.

According to Okalusa County Sheriffs' spokesman Ray Chord, negotiations began after a surprise visit in late August. At that time an FCC engineer told the pirate that he would probably only receive a letter of warning and: ...that probably would be the end of it."

The man calling himself Alan told the local newspaper that the station had been on the air for about two months and its operation had been covered by local television stations. "Then complaints began coming in from other radio stations," he said.

"We are on a non-commercial radio band using free airspace," he said. "You don't really need a license to operate on that airspace."

While he pirate did not interfere with commercial radio stations, news accounts say that at least one North-West Florida religious station, WTJT FM, had experienced interference. E.Y. Mock, the licensed stations Chief Engineer said there had been complaints from listeners. Mock said he had

tried to talk the pirate in reducing power without success. That's when he called the FCC.

FCC Public Affairs Specialist Kim Silva says that "pirate stations are common."

Silva says that the FCC investigates all complaints about pirate station most of which are filed by licensed broadcasters and their listeners. Sometimes says Silva, the pirate stations will voluntarily surrender their equipment when the know that hey are in violation of Federal law.

By the way, operating on 89.9 MHZ does require an FCC issued broadcast license.

The FCC hopes that this pirate is off the air for good.

(Via Newsline, FCC)

(*****

REPEATER V.S. REPEATER V.S. THE FCC

A repeater group that says another repeater is interfering with its system has filed a petition to the FCC for the issuance of a "Show Cause Order" aimed at getting that system taken off the air. The Monmouth County Repeater Association of Asbury Park, New Jersey says that the issue is that of codifying Amateur Radio repeater coordination and the right to operate a coordinated repeater free of interference from an uncoordinated repeater.

The Monmouth County group operates a 2 meter system under the call sign WB2ABT on 146.645 MHZ out. Another repeater group called SPARK operates the WA3MDP repeater on the same frequency pair about 100 miles away in Bangor Pennsylvania. Each area is serviced by a different repeater coordination body. The Monmouth County Repeater Association contends that SPARK is an uncoordinated machine. SPARK says that it is fully coordinated.

Back in December of 1996, the FCC's Compliance and Information bureau ordered the WA3MDP system to immediately cease operation.

SPARK's response was to request an investigation of a possible conspiracy between the Mounmouth County Repeater Association and its coordinator in misrepresenting the facts in the case to the FCC.

Now the Monmouth County group has raised the stakes. It has hired Washington DC Communications Attorney John McVeigh, KD4VS, to represent it. Mc Veigh's' first action is the filing of the Show Cause petition along with a demand that the Commission address certain key issues. These include a direct and unambiguous ruling as to whether or not volunteer frequency coordination of repeaters in the Amateur Radio service holds and legal standing. Also, if called upon to do so, will the FCC enforce section 97.205(c) of its rules. That section says that a non-coordinated repeater holds the primary responsibility to resolve the interference that it causes to a coordinated repeater.

In essence the Monmouth County Repeater Association is taking the position that most expected the newly formed National Frequency Coordinators Council or the American Radio Relay League would assume. That of getting the FCC to state unambiguously the need or the lack of need for repeater frequency coordination in the Amateur Radio Service and gives the Commission absolutely no room for an indecisive response.

No matter the FCC decision, this small club in New Jersey has put itself into the position of a defacto single point of contact on repeater matters, to the FCC. That too sets a precedent. One that will affect the day to day operation of every repeater operating in the United States.

(Via W5YI Report, others)

(*****

PA ARES SEARCH

Meanwhile, the Butler County Pennsylvania Amateur Radio Emergency Service provided communications support during the week of August 3rd. This, as authorities conducted a search and rescue operation for a missing 40-year old man.

Hams came into the picture after a request was made to the Butler County ARES unit for communication help. Assistant Emergency Coordinator Ray Albert, N3XCD, activated the county's ARES unit.

He also called for assistance from other nearby ARES teams.

Unfortunately, the story does not have a happy ending. Reports say that the missing person was eventually found deceased.

(Via ARRL)

(*****

PA TAX COLLECTOR

Dick Tyler, WA2EHL, reports to Newsline that tax collectors from Philadelphia are showing up at ham radio events in the Delaware Valley. The story he hears is that under cover agents went through some hamfests early to see who was selling. After the shows opened, the inspectors began demanding that the proper sales tax be collected on all items.

Some vendors claim that the tax agents used what they call -- and we quote -- "Gestapo tactics to insure collection." But the agency has a different story. Tax people say that the law is the law and like it or not, all taxes must be paid.

(Via WA2EHL, Franchaise Tax Board)

NW CONFERENCE DATE CHANGE

There is a date and location change for the Northwest VHF/UHF Conference. K7ND says that the date new date is November 1st and the location is the city of Fife, just outside of Tacoma, Washington.

(Via K7ND)

(*****

KPH - RIP

The oldest West Coast maritime station, KPH in California's Marin County has gone silent. According to Daniel Mackintosh, W6SPC, KPH used high-speed Morse and SITOR to communicate with ships at sea. The station had operated from the Bay Area for more than 80 years but is now a victim of a shrinking market for its services and competition from more efficient maritime satellite systems.

MINI-SPUTNIK TO BE TOSSED FROM MIR

Remember the beep-beep-beep sound of Russias' first earth satellite back in 1957? To mark the 40th anniversary of the launch of Sputnik One, l'Aeroclub of France and the Russian Astronautical Federation have embarked on a joint venture to launch a miniature, working version of the original Sputnik.

According to AMSAT North America, students from the FR5KJ radio club at Jules Reydellet College on Reunion Island and at the Polytechnic Laboratory in Russia are cooperating on the mini-Sputnik I. The Russians will build the satellite body. A transmitter made by the French students will be placed inside. It will transmit a continuous series of beeps on 2 meters starting October 4th. This, after it is literally hand-tossed into space by a cosmonaut from the Russian Mir space station.

The idea of this commemorative mini-Sputnik is to interest youth in space projects and inspire them to consider careers in space-related fields.

HAM RADIO AT 100

Finally, want to know what life was like before ham radio? Then ask Bill Petrie, K1ETR, of Waltham, Massachusetts, who turned 100 earlier this month. According to Bills niece, Marcy Just, Petrie was born in England and came to the United States as a child. He is a World War I veteran and is retired from the Waltham Watch Company.

Bill Petrie has been ham for more than forty years and is still on the air. Ken Hopper, K2VAM, in Phoenix, Arizona, says that Bill recently told him he was planning to make a trip up his tower to, in his words "tighten some bolts."

In a letter to Petrie congratulating him on his milestone, ARRL Executive Vice President David Sumner, K1ZZ, extended hearty congratulations to Petrie on behalf of the officers, directors, members and staff of the

League. We at Newsline want to add our congratulations as well.

Closed Circuit Advisory

Newsline report number 1048 for release on Friday, September 12th, 1997 to follow.

(*****

The following is a QST

A probable law suit over lost time on a repeater and a follow up on the Indiana beach ball jamming story highlight this weeks Newsline report number 1048 coming your way right now:

(*****

ELKHART JAMMER UPDATE

An update on the Elkhart Indiana beach ball jammer story of two weeks ago. Word that the two people responsible for building the six devices found in the past year have been identified and have admitted to the police that they did it. But Elkhart authorities say that there is nothing they can do to punish the pair because federal preemption gives the city no authority in the case. And because of this, the Sheriffs department is refusing to make public the names of the people involved.

But hams in the Elkhart area who were involved in the search tell Newsline that neither are licensed and that one of them is a woman. According to

Mike McCauley, KB9GNU, the Public Information Officer for Elkhart County Department of Emergency Management, not all the devices were hidden in beach balls. McCauley says that a number of the jamming units were literally sold into the homes of the general public. One was even equipped with a ground seismic detector that would turn the unit off when a direction finding team came within about 30 feet of it. Another one was put inside of a brand new television that was returned through the distribution system at Wal MART and sold to a couple in Elkhart.

And why did the two go to all of this trouble to jam a repeater? Word is that they simply do not like ham radio and appear to have a personal vendetta against hams.

Meantime, the Sheriffs' Department and several Elkhart radio groups have written letters to the FCC asking the agency to investigate the pair. McCauley says that he has also written to the Federal Emergency Management Agency asking it to intercede with the FCC to get an investigation started. So far, neither agency has seen fit to responded.

(Via KB9GNU, N9PGE)

(*****

FCC LEVIES FINES FOR UNLICENSED OPERATIONS

And an update on our story of two monetary forfeitures imposed by the FCC. The agency has fined Robert J. Powers, KB7TQA, of Puyallup, Washington, $1600. This, for operating on an unlicensed frequency.

The fine against Powers stems from a violation that occurred a few months before Powers got his Technician ticket in April of 1993. According to the order, FCC agents from the Seattle Field Office discovered Powers on January 26, 1993, operating a radio station on 27.455 MHZ "without authorization from the Commission." He was cited for violating Section 301 of the Communications Act. Powers initially was fined $2000. The FCC subsequently reduced the forfeiture to $1600. Powers was ordered to pay the fine by September 22nd.

The FCC also cited Victor Pessaro of Melbourne, Florida, for CB radio service violations that occurred in early 1994. Following up on interference complaints, FCC agents tracked down Pessaro as he was operating on frequencies other than those authorized by FCC rules.

Pessaro refused the FCC agents request to inspect his station. As a result, the Vero Beach Field Office issued a Notice of Apparent Liability to Pessaro for $5750 for operating over the regulated power limits in the CB radio service and for failing to allow an inspection. The forfeiture was later reduced to $750, and the FCC upheld the fine in an order released August 22. Pessaro also has until September 22nd to pay.

(Via FCC release)

(*****

OSHKOSH HAM RADIO CLAIM

An Oshkosh Wisconsin amateur radio operator is seeking $550,000 from Winnebago County as the result of his being denied access to a county owned repeater used for RACES communications. According to the Oshkosh Northwestern newspaper, attorney James Manske, has filed the claim on behalf of Richard Lemme. The paper says that Lemme is reportedly asking $50,000 in compensatory damages, emotional distress and loss of radio use and loss of enjoyment. Lemme is also demanding $500,000 in punitive damages.

All of those involved are said to be hams although no call signs were given. At issue is a fifteen minute time slot on Sunday evenings when members of the Radio Amateur Civil Emergency Service train and test their equipment. The claim, typically a precursor to a lawsuit alleges that Winebago County conspired with RACES members Michael O'Conner and Duane Ritschke, to keep Lemme from access to the county owned radio repeater during the Sunday evening net. Lemme also claims that O'Conner and Ritschke interfered with his access at other times when the repeater would be available to any licensed radio amateur.

The newspaper says that the dispute between Lemme and the RACES group began last November. It quotes O'Conner as saying that Lemme was booted off the repeater after several warnings to adhere to guidelines for communications content deemed by the RACES group to be appropriate on the air.

Last May, Lemme unsuccessfully sought a restraining order be issued against O'Conner whom he alleges cut his coax transmission line.

As the dispute escalated, Winebago County Executive Jane Van De Hey ordered that the repeater be shut down. The repeater went silent in Match but was reactivated early last May for use during the summer tornado season.

No matter what the outcome of Lemme's litigation, it appears as if all the hams in Oshkosh will be losers. This is because the repeater itself may soon be gone. Van De Hey says that she wants to get rid of the equipment and the in-fighting that has grown up around it.

(Adapted from The Northwestern furnished by W6CCK)

(*****

MORE VANITY PAPERWORK

More paperwork for hams making paper filings to obtain a vanity callsign. As of September 15th, applicants for vanity calls using form 610V will be required to submit a Form 159 as well. Form 159 is the FCC Remittance Form and the agency says that applications received on or after September 15 and lacking a Form 159 will not be processed. They will be returned to the applicant instead.

Previously, the FCC required an Form 159 with a hardcopy Form 610V only if the applicant was paying with a credit card or money order or for a single payment to cover multiple applications.

The change comes with very short notice. The FCC has yet to issue a formal public notice to address it. None-the-less, the Commission says that the September 15th start-up date is firm.

(Via FCC, Sunnyvale VEC, Newsline)

(*****

TSARC RESURRECTION

Can repeater frequency coordination be saved in the New York, New Jersey and Connecticut metro area? This question will be answered on September 20th by the hams who show up at a meeting Roseland New Jersey. Its a meeting being held in the hope of resurrecting the faltering Tri State Amateur Repeater Council.

The story of the failure of TSARC is simple. All the frequencies that could be coordinated got coordinated. Those that have them feel that their repeater channels are cast in concrete. So why continue to support a coordination council? Apathy took the place of logic and common sense and TSARC began to crumble.

Earlier this year one attempt was made to restore the organization. It failed, but it did lead to the second meeting for later this month. The good news is that about two dozen of the areas repeater owner-operators or their appointed representatives said that they will be on hand to discuss, and possibly approve a new constitution and by-laws. The bad news is that there are close to three hundred repeater owners operating machines in that area. So far, most appear to have decided to boycott this, or any other attempt to resurrect TSARC and to restore repeater frequency coordination in the tri-state area.

SBE HONORS W3KD, K7CR, KB7UXU:

The Board of Directors of the Society of Broadcast Engineers has elected Christopher D. Imlay, W3KD, as a Fellow of the Society. This, in recognition of his service and contributions to the advancement of broadcast engineering. Imlay, the ARRL General Counsel, has served the SBE in the same capacity since 1992 and previously, as SBE's legal counsel since 1984. The society says that Imlay has provided a professional and respected voice on legislative and regulatory issues.

The SBE has also named Clay Freinwald, K7CR, of Auburn, Washington, as Broadcast Engineer of the Year. Freinwald is the Chief Engineer at KBSG AM and FM in Seattle. He is also on of the developers of the Pacific Northwest 20 KHz spacing bandplan used for two meter repeater coordination.

Finally, the SBE named Michael Scott, KB7UXU, of Pulyallup, Washington, as Educator of the Year for the second year in a row.

Scott is an instructor at Bates Technical College in Tacoma.

(*****

NTBP SUCCESS

The North Texas Balloon Project has successfully launched its second high altitude balloon mission of 1997. The flight took place on September 6th with liftoff from Clifton Municipal Airport.

There were a number of interesting experiments carried on board. These included a crossband repeater, digipeater, and parrot repeater. All worked flawlessly throughout the flight.

The estimated burst altitude was 92,000 ft and the flight duration was just over two hours.

(Via KG5OA)

UK HAMS NOW HAVE US TECH RECIP

On the international scene, word that United Kingdom Class B license holders can now get reciprocal licenses to operate in the United States. On August 12th, the United Kingdoms Radiocommunications Agency announced that it had signed an agreement with the United States to permit U.K. Full Class B hams visiting the USA to apply for Technician class reciprocal licenses. The agency says that this marks an important first. It is the first time that U.K. Class B amateur operators are able to operate in the United States. No word on what privileges U.S. Technicians can expect when visiting the U.K.

(Via GB2RS)

(*****

CANADA VHF/UHF

Radio Amateurs Canadas' VHF and UHF Spectrum management committee has released an interim version of bandplans covering the microwave spectrum from 3 GHz to 250 GHz. There are eight amateur bands in this part of the spectrum, five of which contain allocations in which amateur radio has primary status. But there is strong competition from powerful industrial interests for most of the spectrum below 75 GHz, so Radio Amateurs Canada feels ham radio will not retain primary status long unless it makes good use of all assigned spectrum. The RAC bandplans suggest how the frequencies can be used by Canadian amateurs.

(Via RAC)

REVIEW OF VK RADIO COMMUNICATIONS ACT UNDER WAY

Australia's ham radio community has been given a chance to have the amateur licensing system reviewed. This, in hope of separating it out from the commercial framework of Australian Apparatus licensing.

The opportunity for change comes as the result of an open public review of the Australian Radiocommunications Act 1992 and recent amendments. This review was announced by the Department of Communications and the Arts at the end of July and is where the Wireless Institute of Australia's submission titled "Towards a New Licensing System", is to be considered.

The paper, presented to the Minister for Communications last February, has already been passed to the licensing authority for this review.

HOUSE HONORS RADIO CLUB

The Pasadena Radio Club, W6KA, took advantage of this year's Field Day to commemorate its 40th year of affiliation with the ARRL. Proclamations from both the US House of Representatives and the California Legislature honored the group's 40 years of public service.

The club was founded in 1957 and has been called upon numerous times over the years to help out in emergencies. Club members relayed health and welfare traffic during the days following the 1994 Northridge earthquake. The club also has supported numerous public service activities and events.

Mir Status

The Mir Space Station continues to be a problem child as the Russians fight to keep it going. After a space walk that reset its solar panels and fully charges the ships batteries, the on board main computer failed again for the third time, forcing the crew to shut down all but life support activities.

Working once again in darkness, they coaxed the recalcitrant computer back to life but the failure raises the question once again of how much longer can that aging spacecraft be kept in orbit? A serious consideration for both U.S. and Russian Space authorities. The United States plans to send the Atlantis up to dock with Mir late this month and is taking a close look at Mir's immediate future before that flight gets off the launch pad.

The Russians hope to keep Mir going until the International Space Station can be inhabited early in 1999. At that time the Deputy Director of the Russian Space Agency says they plan to wind down Mir activities and send the huge station to its demise in the Pacific Ocean. Most of it should burn up on the trip through Earths atmosphere. The remainder will be pointed toward an area in the ocean, far removed from civilization.

Of particular interest to the Amateur Radio fraternity, Mike Foale, KB5UAC, is one of the current crew aboard Mir. He has been doing a super job of staying in touch with ham radio operators here on Earth. After taking part in a space walk last weekend, he told Dave Larsen, N6CO:

"Anatoli and I had the pleasure of doing the eva on Saturday. After moving to the area of the broken solar array, we found that it was significantly out of alignment, suggesting there could be substantial damage under the motor and therefore to the pressure hull. More eva will be required. Anatoli was successful in aligning the working arrays to the sun so the Mir

can now fly in a power efficient attitude."

Foale, KB5UAC, also had a Sunday morning chat with Tom Daniels, N3CPX, telling him:

"We're finally getting the place in shape again. We've been in a state of complete turmoil here for the last month or so and just want to clean up the house so we have some cool air flying and the fans and filters are clean."

They were talking on 70 centimeter frequencies and Foale told Daniels that he had not been able to use 2 meters effectively while flying over the United States because the QRM was too intense.

(Via Newsline)

MIR TESTS FOR INT SPACE STATION

Ham radio voice and packet operations aboard the Russian Mir spacecraft has shifted from 2 meters to 70 cm. An experimental worldwide FM simplex frequency of 437.650 MHZ has temporarily replaced the current 2 meter operating frequencies.

The tests are being conducted by the Mir International Amateur Radio EXperiment group. They are based on suggestions from several Amateur Radio satellite groups who are interested in the feasibility of operating Mir and the International Space Station simultaneously on the 70 centimeter band.

MIREX hopes the experiment will determine whether the 70 cm frequency receives interference from the existing commercial VHF equipment on Mir and whether 70 cm operation will interfere with onboard equipment. More important for simple ground stations is whether they'll be able to compensate for 70 cm Doppler shift on voice or packet.

Operations will return to 2 meters after the experiment ends later this month.

(Via MIREX)

(*****

DX

In DX, a new super low frequency record has been set in New Zealand. ZL2CA reports that the 122 meter mast at Kumara, near Greymouth, worked very well for ZL3FJ when used down on 176 kHz with 100 watts. The mast has recently finished service for a AM broadcast station. Signal reports from listeners in New Zealand were typically 20 to 50 dB over strength 9 for the ZL3FJ 176 kHz CW transmissions.

(Via ZL2CA)

And those of you listening across the Atlantic pond please take note that the GB3ANG 2 meter beacon near Dundee has been returned o the air. It came back on August 12th on its new frequency of 44.453 MHZ. The beacon also now transmits its IARU locator instead of the old five character QRA locator. GB3ANG had been taken out of service in order to modify it to conform to the new IARU Region 1 2 meter bandplans.

(Via RSGB)

Also, to commemorate the 50th anniversary of the United States Central Intelligence Agency, special event station NN50CIA will be active through September from CIA premises in Northern Virginia. Suggested frequencies are 3550, 7050, 14050, and 21050 kHz on CW. Also 3850, 7250, 14250 and 21350 kHz on SSB. QSL via KB4EFP and include an SASE.

(Via KB4EFP)

EVEN THE PATHFINDER CARRIES A PAGER

Were you aware that when scientists at the Jet Propulsion Laboratory want to contact the Mars Pathfinder or Rover, they page them? Well kind of.

Mary Shea, who writes for the CGC Communicator newsletter found out that the Rover and Lander communicate with each other on 459.7 MHZ using radios purchased from Motorola's Paging Products Division. Mary says that with a trusty pager, the rover is usually quick to respond.

(Via CGC Communicator)

CQ CELL-FONE

Finally, it may be a an inside joke on the part of cellular telephone manufacturer Nokia of Finland, but some of their telephones can actually call CQ all by themselves.

No, its no joke. Sam Haviland of Farmington, Connecticut, recently discovered that one of the ring options on Nokia's Model 638 makes the phone send CQ in Morse code. Haviland, a Navy veteran, is not a ham but he still remembers the code and how to read it. Ironically, Haviland's father in law was F. Cheyney Beekley, W1GS, an early QST Magazine Advertising Manager for the American Radio Relay League.

Since I did not get the original post, I'm responding thusly.
> Gregory T. Helding wrote:
> >
> > I am speaking to anyone who cares to listen as a soon to be new ham> > (Technician Class) I am attracted to the hobby because I love electronics

I will enter the hobby as a technician no-code. It annoys
> > me to know that I will meet those who feel that I will not be a real ham.

Be assured that I for one will never look down on you for your no-code technician status, in fact I have, as a volunteer examiner, helped license many of the same, some whom are my friends. The no-code class was initiated as an entry class, and for those whose interest did not extend to HF, and I accepted that and those who chose it without reservation, and have helped some upgrade when they decided to. I have privately e-mailed several individuals like you who have expressed similar feelings on this NG.

Looks like it's time for a public proclamation on the subject.

I did have a few trepidations for the future when the no-code tech was implemented since it was almost inevitable that those strident anti-code activist proponents-there has always been a few around-would use the no-code tech as a step toward acheiving their Agenda, that of eliminating code from ham radio. Nothing I have seen here has changed my mind on that,some of their protestations to the contrary, although I am as certain that some engineers and other highly trained technical persons posting here have no such animosity torward code, but the fact remains that they still are on the ban-the-code side of the fence, and see code as obsolete if for none but technical reasons. Simpler things sometimes seem to elude brilliant minds.

Whether IRT (International Radio Telegraph)code-commonly called Morse on this NG- qualification should remain for HF priveliges is a question to be decided by governments and they, for sure, will be amply advised on the issue.

I personally believe that code communications is valuable enough an asset to ham radio to maintain the qualification, at least well into the next century when technology not yet known may make all we know today as obsolete as OOK code communications is now said to be. We all know that technologies exist today which overwhelmingly overshadow it, at least under most conditions.

The fact that other services have largely abandoned code in favor of more efficient and more cost effective modes says nothing about its usefulness in ham radio. In fact, since ham radio may before long be the ONLY service still using it, that may be a point in favor of keeping it, although the military services are said to be retaining code for special operations. We could have the "only game in town", so to speak. If the need should arise for code operators, where would they be found if not ham radio? How can anyone say this will never happen?

You will note that I am not advocating ignoring other, better modes. I will be interested and will operate those as they arrive in ham radio and become widespread and affordable. Some of that is happening today and I feel stirrings of interest which may help overcome the feelings of deep disappointment that was associated with Amateur Packet readio.

The allegation that making one learn code for a ham license is "hazing" is, of course, absurd obfuscation. It is a qualification, nothing more, nothing less. Many persons with no interest in code who learn it only as a qualification for a ham license find that it is a interesting and enjoyable mode with a lot going for it, and a satisfying skill as well. Sort of like learning another language, in fact that's what it really is. As in learning another language, it is easier for some people than others.

Best of luck to you and congratulations on your upcoming ticket. Join us and enjoy whatever part of the hobby/service you find that you like.
73, Dick W0EX

4331. Need Micor help!!

I've been converting a Micor VHF radio to 2 Mtr.repeater operation and the whole thing has gone well excepe the exciter. No matter what I do, I can't get more that about 100 Mw out of it instead of the 400 required to operate the PA to the full rated output. I've added the small capacitors to bring the values in line with the 130 to 150 Mhz range as well as alligned all the various stages. The voltages to the exciter are fine and I've used two different comm. monitors to verify the power output. Anybody have any ideas I sure would like to hear from anybody who "can tell me where to go" hi hi Thanks de KO6RO Tom

Someone was lying to you, or you misunderstood what they said to you.
Some amateur equipment needs Type Certification to be marketed, but
Type Certification is *very* different from Type Acceptance. Computer
equipment needs Type Certification to be marketed too. It has nothing
to do with *intentional* radiation, it has to do with levels of spurious
emission.

I use the one called Host Master 2 Plus, which works fine in Windows 3.x or Windows 95, even though it is a DOS program (I use it in Win95). It works with my Kantronics KAM Plus on all of these modes: RTTY, Pactor (either FSK or AFSK), CW, and Packet. I haven't tried other modes. My biggest complaint is that it doesn't do WEFAX, so I built a small, simple circuit per the JVFAX instructions, and that works OK.

I can't really recommend Host Master 2 Plus because the interface is not friendly and is confusing. Nonetheless, the only other ways of using it is with Pacterm or with any of the conventional communications programs, such as Procomm. Actually, Procomm works about as well as any of the programs that are specific to the KAM Plus. I also would like to find a program designed specifically for Windows 95. Remember, however, that all you really need, along with a list of the TNC's commands, is the most elementary communications program unless you are trying to operate in two modes at once with the VHF and HF ports. Even the Windows 3.1 "Terminal" program should work.

I assume you are refering to military naval ships. Not sure what dome you are refering to, ships have lots of enclosed antennas. If the antenna is the highest antenna on the ship, it is (absolutely!) the TACAN antenna, about 1GHz, used for tactical air navigation (and TACAN is not just on carriers, most bombat ships have it.) You might also be seeing some JTIDS (Joint Tactical Information Distribution System), also about 1 GHz. Other domed antennas include Electronic Warfare (EW), various SATCOM, and some radars.Most radars are not dome covered, but a few models are. You can look at a Janes Fighting Ships encyclopedia at your local library & it might provide more information of interest on any one class of ship. I'm pretty sure you were thinking of TACAN.

4340. mc68ch11 based morse code/pc interfacing

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-15 00:00:00 UTC
From: lonnig@vnet.net
Message-ID: <5vi78v$9v5$1@ralph.vnet.net>
Source record: 190406
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi,

I would like to build a mc68hc11 based morse code generator and decoder. My plans are to start with a dumb terminal or pc (in terminal mode) as the input to the microcontroller.

As the user types, morse code is sent to a speaker and or to a suitable output to be interfaced with a radio. Also, I would like to be able to use the hc11 to decode incoming morse code and display it on a pc or built in lcd display.

I know this probably been done to death, but I am having a tough time locating c, c++ or assembly code and algorithms. I would also like to see any hardware info if it is available.

I have been out of ham radio for some time, so I thought this would be a good project to start with.

I can use the information even if it is not directly for the hc11, any related information will be helpful. I am using linux and win95 and am not particularly interested in doing this via sound card, though the software may be of some help.

Thanks,

KD9GN@vnet.net

Hello:

This is to announce the availablity of QwikKep 01.00, a program to
encourage the rapid distribution of satellite Keplerian Element Sets.

QwikKep is available at the following URLs:

http://www.trucom.com/ppages/marty
ftp://ftp.kc6ufm.dyn.ml.org/pub/QwikKep

Thanks for your attention.

Take Care & 73

Writing code to send Morse is not difficult I'll be glad to send you some.
It is the decoding it that presents the problem. This is referred to as a
difficult problem. As far as I know there are no algorithms that approach
what a person can do on non synchronized CW.

The only way I can think of to do it is to save the high and low states
until
you decide you have a letter and then process the states into dots and
dashes
and look up the letter in a look up table. The trick is when do you have a
complete
letter. Not real difficult if a computer is sending code but near
impossible when
a human is running his letters together a little bit.

Good Luck
Gordon

: sticker.

Hm. My Yaesu FT-757GX has no such sticker. Nor is there room there to
put one.

Even if it did, it is still a certification that it meets Part 15
standards. It is NOT type acceptance.

4346. Chesapeake Bay Chapter, 10-X Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-16 00:00:00 UTC
From: "E. Allen Brown" <Al_Brown@ix.netcom.com>
Message-ID: <5vkk3f$8lg@sjx-ixn10.ix.netcom.com>
Source record: 190262

To: All Ten Meter Users
From: CBC Chapter Head, Phil Harich - N3UNF
Subject: CBC at the CARA Hamfest - Oct. 5

The Chesapeake Bay Chapter (CBC) of Ten-Ten International, Inc. has reserved a table at the Columbia Amateur Radio Association (CARA) hamfest to be held on Sunday, October 5 from 8:00 am until 3:00 pm at the Howard County Fairgrounds near West Friendship, Maryland.

We will be distributing information about CBC *and* plan to have a ten meter station set up and operating on the CBC net frequency, 28.435 MHz.

Anyone who contacts the CBC station during the hamfest will be instantly qualified to become a member of CBC. In addition, since October 5 will be Chesapeake Bay Appreciation Day, a contact with any CBC member will be worth a one time credit of 100 points for that day.

See rules posted at URL:

http://members.aol.com/Cchapter/bonuspro.htm

for details.

The Howard County Fairgrounds is located just off of Maryland I-70 at exit 80. Take exit 80 to MD Rte 32 South for 1/2 mile to the first traffic signal. Then, turn right on to MD Rte 144 West. Follow MD Rte 144 for one mile to the fairgrounds on the right. There will be ample signs directing you to the fairgrounds.

Talk-in will be on 146.52 simplex, 147.135/735 repeater, 222.32/92 repeater and, naturally, on 28.435 MHz USB.

Join us in person, if you can, or work us on ten meters.

73,
Phil N3UNF
CBC Chapter Head #FM-01

to do something, or at the least, say something, to express our cares
and concerns that Amateur Radio, in whatever form, will continue into
the 21st Century and beyond.

>
>I really don't want a bunch of negative thinking people in my hobby.
>What kind of service can they provide when they're really needed?

*** Transmit without license !! It's possible !!***

Not a problem at 1750 KHz. People do it all the time. In the States,
you can do 10W (if i recall correctly) but your transmitting antenna
is limited in size. But your *receive* antenna can be as big as you
have real estate for. Check a recent ARRL Handbook if you want to
build a 'Lowfer' rig.

Again as I stated UNMODIFIED, UNAMPLIFIED, STOCK FM-10 is 47 CFR 15
LEGAL. A MODIFIED/AMPLIFIED/EXTERNAL ANTENNA is **NOT LEGAL**.

I would consider "micro broadcasting" to be the use of a LEGAL FM-10
or similar product. As the power is definately in the micro power
level.

4352. Is there a directory of linked repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-16 00:00:00 UTC
From: jegastineau@mindspring.com
Message-ID: <341e7c5e.3794579@news.mindspring.com>
Source record: 190268

There are a number of repeater directories available, such as the ARRL book and the artsci web-based directory. They show that certain repeaters are linked, but not to which repeaters.

For example, here in WV there is the HAMTALK system of nine or more repeaters. In Ohio/PA and in MD there are similar systems. When I travel to a new area, how can I learn of such systems? The simple repeater directories don't help.

Hence the subject line: Is there a directory of linked repeater systems?

Some hams have been fortunate enough to request the same tail number as their ham call sign.

Only problem with such a tail number: Air Traffic Control sometimes gets confused by the short, single number call sign.

A friend and I used to fly an airplane with the tail number of N29RM. There were more than a few cases of ATC asking for the rest of the call.

Other tail numbers of interest: Rumor has it that Nike purchased the tail number N1KE off of one guy's airplane so that they could put it on the corporate jet.

From ARRL Letter:

Cadets and faculty of the United States Air Force Academy--in cooperation with University of Colorado-Colorado Springs--have designed a small space payload that will be launched on an Atlas rocket the last week in October. Named Falcon Gold, the mission will sample the Global Positioning System (GPS) signal from behind the GPS constellation and downlink spectrum samples to ground stations for post processing. Due to its short (three-week) lifespan and a limited number of ground stations, the researchers are looking for volunteers around the world to collect telemetry and mission data from the satellite and forward electronic copies to the Air Force Academy. The satellite will transmit on 400.175 MHz, accessible from many scanners and Amateur Radio equipment. The data will be at 9600 baud using the AX.25 protocol used by hams. For more information, see:

http://www.pcisys.net/~mork/

Jake Brodsky <frussle@erols.com> wrote:
>Some hams have been fortunate enough to request the same tail number
>as their ham call sign.

I got my call because it also fit the aircraft N-number format. The
N-number has been reserved and its waiting for inspection to certify
that the N-number has been physically repainted on the aircraft. So
I hope to be able to QSL from "N9YS on N9YS aeronautical mobile"
soon :-).

>Only problem with such a tail number: Air Traffic Control sometimes
>gets confused by the short, single number call sign.
>
>A friend and I used to fly an airplane with the tail number of N29RM.
>There were more than a few cases of ATC asking for the rest of the
>call.

I once heard a call that was as short as "1-Alpha" for an aircraft
with a call like N1A on a flight. Sure enough ATC queried them
for the rest of the number. The pilot sounded really tired of the
question - he didn't own the plane, just flew it for the corporation
that thought it was a neat N-number. I suspect that if you gave
the N-number as "November-1-Alpha" on first call up that it might
help to reduce the queries, so long as ATC had some confidence
that you hadn't been chopped off at the end. For instance "XYZ
Center, November-1-Alpha level 10,000" brackets the call nicely.

>U.S. amateur population. 60? That's now about 0.01%.

You keep pulling these absurd numbers out of your butt, but anyone with a receiver can easily determine for themselves that there are many many more than 600 bad apples on the air on any given evening. There are at least 90 bad "channels" on 75m, and most of them have more than a few of the element Drew decries parked on them. CB is often less offensive. And there are members of the bad element on other bands as well.

And many of these bad apples have been there a very long time. Back when the FCC was doing enforcement, they issued more than 600 citations annually (disproportionately to Extra class licensees). So unless you are suggesting that the FCC targeted the good eggs and ignored the bad ones, you have to admit things were worse back then than you say they are now. Things are certainly much worse now that the FCC has effectively abandoned its job.

When I have non-ham passengers in the car, I leave the HF rig OFF. If they ask about amateur radio, I demonstrate the VHF or UHF rig to them. Otherwise they are likely to get the, more than a little bit correct, impression that amateur radio is just a larger version of CB. Of course if the passengers are techies, I show off the HF digital setup, and leave the speaker turned down so that they won't notice the swishing carriers and strings of dits sent by your sainted CW ops trying (futilely) to jam activities in the digital subbands of HF. (But if they are really sharp techies, I'll let them hear the garbage which is unable to stop the digital contact.) Note I'm not talking about the usual tuning up and calling over digital signals which is extremely common on HF. I'm talking about what can only be efforts to disrupt and jam.

4367. Out in the open, not in brown wrappers

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-16 00:00:00 UTC
From: K0HB@USA.NET
Message-ID: <874439250.11611@dejanews.com>
Source record: 190283
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Before I begin:

-- This is not a specific commentary on the recent announcement by one manufacturer regarding their expanded sales channels.

-- The FCC (not the amateur community) is responsible for what happens OUTSIDE the amateur bands. (I don't agree with the behavior of the freebanders, etc., but it ain't my job to fix it either.)

With that disclaimer out of the way. . .

. . .I find myself in disagreement with many well-meaning folks who advocate placing restrictions on the wide availability of amateur radio equipment and supplies. These are the folks who suggest it be a crime to own amateur equipment without a license, and who are not thrilled about the fact that one national retail chain sells a line of UHF/VHF amateur equipment.

. . .While it is easy, on the surface, to agree with their goal (keeping amateur equipment out of the hands of bootleggers), I feel the attitude that amateur equipment should be treated as some sort of controlled substance is short-sighted and in fact damaging to our service.

. . .I live in a large metropolitan area. We have one full line amateur store in town. There are no other similar stores in the whole state. In the four states which border us, there are 2 more amateur radio stores. THAT'S IT! In 5 states, there are only 3 stores! In the whole country, my guess is that there are less than four dozen stores selling amateur radio equipment, antennas, and supplies! It is as though we were some secret society, bent on concealing our presence from the world.

. . .Not all that many years ago, there were at least 6 electronic stores here in town which sold amateur equipment (not exclusively, but they all had a good selection). Add to that two Heathkit stores, and even the Sears stores sold amateur transceivers for awhile. (Yes, Virginia, right there along with the Craftsman sockets and Silvertone TV sets.) In the same era, Radio Row in NYC was blocks of wall-to-wall storefronts catering to electronics experimenters. Popular Science magazine had a regular column about amateur radio, and occasional construction articles. Every second little town had an amateur radio club. Amateur Radio was a populist, Joe SixPack kind of hobby.

. . .During those years it was easy for a person to get interested in being an amateur, to shop around for the best deal on equipment, and to meet an Elmer. We were visible to the public, and well regarded.

. . .Then somewhere along the line came the magic of 1-800 shopping, amateur radio marketing became streamlined, and radio stores disappeared from Hometown America. With the demise of the local radio store, all the Elmers disappeared into their shacks and newcomers flounder around in fancy four-color ads in back of CQ and QST magazine, trying to decide how to be a ham.

. . .Rather than continuing to restrict the availability of amateur equipment, as though we were selling assault weapons or recreational pharmaceuticals, I vote for opening up the market. Let's have radios for sale in the strip malls alongside the video games, Lionel trains, and mountain bikes. And it won't hurt if a few of us put on our Elmer-suits and lurk around to spot the likely recruits.

73, de Hans, K0HB/4ID

~~~
This is a test of the emergency signature system. Were this an actual signature, you would see amusing mottos, disclaimers, a zillion net addresses, or edifying philisophical statements. This is only a test.

I inquired about this a year ago, after I sold a business and was deciding what to do with my life. Let me share with you why it won't work. THE MAJOR MANUFACTURERS WON'T LET IT.

With out naming names, I will share with you what I had to do to get a "franchise" to sell a specific national brand.

I had to inventory at least 5 pieces of EVERYTHING in their line, including top dollar HF transceivers and HF amplifiers. This included every tiny piece of crap din plug, accessory pack, etc, etic yada yada yada. Total costs for 1 line, approx $75,000, all by the way at the manufacturers suggested cost..no special pricing like HRO or AES, all cash on the barrelhead.

Another name brand, demanded the same PLUS I had to have onsite repair facilities and they dictated the equipment. Total investment, approx $110,000.

Multiple this by all the brands needed to be 1 stop shopping, the antenna, the books, the cables, the whole magilla, plus storefront, $just over $500,000.

Working on 10-15% margin, paying overhead, including employees..NO WAY JOSE.

I could and did for a bit work out a deal with HRO, and got better pricing as a re-distributer, but that limits the $$$ I could make.

Couple this with a fairly limited market area, you're looking at bankruptcy in months. If I put a shop in downtown Manhattan, what do you think the actual foot traffic would be?? Ever been to Barry Electronics (are they still around)?? The place was geared for mail order, not people wandering in off the street.

Face facts, the day of the tiny store catering to individual markets is passe. Even the large chains aren't interested..too limited in its

potential $$$. The Wiz and Circuit City and PC Richards work on volume and plenty of people in and out of their stores. The market for amateur radio is tiny compared to people buy 25" TV's. The investment is enormous compared to the return.

Those that are in it now have a tremendous advantage of anyone trying to get into the market.

As far as Elmering, why not volunteer for the radio classes that seem to proliferate in every town. What a great way to show what Amaterur Radio is, from building equipment to proper operating techniques. Maybe show the connection between computers and radio. I wouldn't mention these newsgroups however.

Just a thought from one who tried and didn't bother to go any further

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and

Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great.

Not so for ham equipment....it only is required to meet the technical
standards of part 97, just like any home brew piece of gear must do
(which of course doesn't have to be type accepted either).

4382. Chesapeake Bay Chapter, 10-X, Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-16 00:00:00 UTC
From: "E. Allen Brown" <Al_Brown@ix.netcom.com>
Message-ID: <5vkl48$buc@dfw-ixnews3.ix.netcom.com>
Source record: 190356

To: All Ten Meter Users
From: CBC Chapter Head, Phil Harich - N3UNF (N3UNF@AOL.com)
Subject: CBC at the CARA Hamfest - Oct. 5

The Chesapeake Bay Chapter (CBC) of Ten-Ten International, Inc. has reserved a table at the Columbia Amateur Radio Association (CARA) hamfest to be held on Sunday, October 5 from 8:00 am until 3:00 pm at the Howard County Fairgrounds near West Friendship, Maryland.

We will be distributing information about CBC *and* plan to have a ten meter station set up and operating on the CBC net frequency, 28.435 MHz.

Anyone who contacts the CBC station during the hamfest will be instantly qualified to become a member of CBC. In addition, since October 5 will be Chesapeake Bay Appreciation Day, a contact with any CBC member will be worth a one time credit of 100 points for that day.

See rules posted at URL:

http://members.aol.com/Cchapter/bonuspro.htm

for details.

The Howard County Fairgrounds is located just off of Maryland I-70 at exit 80. Take exit 80 to MD Rte 32 South for 1/2 mile to the first traffic signal. Then, turn right on to MD Rte 144 West. Follow MD Rte 144 for one mile to the fairgrounds on the right. There will be ample signs directing you to the fairgrounds.

Talk-in will be on 146.52 simplex, 147.135/735 repeater, 222.32/92 repeater and, naturally, on 28.435 MHz USB.

Join us in person, if you can, or work us on ten meters.

73,
Phil N3UNF
CBC Chapter Head #FM-01

Don:

In regards to your posting, it seems painfully obvious that some people have gotten their kicks out of making an issue of the code requirements. Some have even gone to the extent of belittling others because they do not share the same beliefs.

To end all the nonsense would be best. I am a Technician-class Op with the General upgrade goodies in hand. Some will not upgrade, but then they don't deserve the privilege, do they? As in all things, some progress along life's highway at faster and slower rates than others. And while I believe you were trying to illustrate the absurd by being absurd, isn't it a shame so many have had to waste valuable time on this?

Not really. HTML posts can be read with Web browsers, not newsreaders.
A *real* newsreader lets you do far, far more than the cruddy browsers
that have an NNTP client kludged on to them. For example, my newsreader
allows me to define a rule to filter out all HTML postings, which I
happily do. :-) There are far, far better tools out there to read news
that Netscape.

Somewhere in the middle of all this is the answer. Ham radio isn't about commercial gear. It's about radio. Was your first rig brand new? Mine wasn't.

A consignment shop with a test bench in the back is a good place to start. My first rig was a used HW-101 which had been checked out by the shop in back. Although I didn't have a lot of money for a radio like that, I was more than willing to spend the few extra dollars for a radio which had been checked out. I didn't know enough back then figure out what was repairable and what wasn't. I figured a shop with a test bench and a 90 day warranty might be worth the extra insurance.

You want another radio sideline? How about offering kits of parts for various magazine articles? Last time I checked, major electronics

parts distributors didn't mind a small order here and there. Add that to a class in a community college, or even the shop itself, and then you are developing a community of techies.

Here's another idea: packaging a radio project has always been a big headache. Most new hams don't have the kind of shop tools they need for building a decent case. Adding hardware for building a case for a project could be a good sideline.

Here's yet another idea: stock the parts needed to build antennas. Aluminum tubing, coax, grounding kits, guy cables, insulators, and the like are rarely all found in one place. If you offer some standard Yagi, Quad or Ground-Plane Vertical plans reproduced at cost, you might make some more business.

As for storefront operations, I hate to say this, but the real store-front operations are very expensive. Most operations hide in one of those industrial centers, where you find the automotive detailing shops, the professional camera stores, the skateboard shops, the dive shops, etc...

People have to know that this hobby exists before they'll find the store. I suspect that very few hams have ever been recruited just because they happened to pass a store front. In over 20 years of ham radio, I never met anyone who got started that way.

It's not the "plain brown wrapper shop" that's hurting this hobby. It's the near total lack of recruiting at the local level. Forget the ARRL for a moment. Even though I think their efforts are lacking in this regard, the most they could ever do is mount a rather nebulous national campaign. We need to build the interest before the shops will become profitable.

The bottom line: "Build it and they will come" was a dream. Real life ain't like that.

73,

Jake Brodsky, AB3A mailto:frussle@erols.com

don't assume that we are all using Gate's Hell's software - quite a few
of the Unix newsreaders don't do HTML - rn, xrn to mention a couple. Save
the HTML for the Web, not UseNet News.

M.Roberts

Content-Disposition: inline; filename="acars.html"
Content-Base: "http://www.mike.mcmail.com/acars.html"

WACARS Version 0.2

WACARS - ACARS Reception and Decoding Software For Windows

WACARS Version 0.2 is the latest version of the highly popular
ACARS decoder for Windows PCs.

So Far other people have been to
investigate WACARS too.

Changes From Previous Version

1. Just About Everything!!
Better Fully Synchronous Decoder.
Built in Signal Strength and CPU Load Meter.
Multi-Document Interface.
Automatic Logging to Disk.
Automatic Sorted Lists of Flights and Aircraft Contacted.
Custom Logs for Specific Aircraft.
And Much More........

System Requirements

1. A PC with Windows 3.1 or later,

The program needs quite a bit CPU of horsepower. It has only
run on my P150 so far, so I don't know the minimum CPU spec.
I have had a report of the previous version working on a DX2-66.

2. Soundcard capable of recording at 19.2 KB/sec.

This is a non-standard rate. It might not be possible on some
older soundcards. Nobody reported any trouble with the
previous version though.

3. Radio receiver capable of recieving ACARS data and an audio cable
for connection to soundcard.

LICENSE

WACARS v0.2 is FREEWARE. This software may be freely copied and
distributed providing that the program and accompanying files
are not modified in any way without prior written permission of the author.
Any charges made for distributing this software may not exceed that
of the cost of the distribution media. You are granted a license to use
this software providing you accept the disclaimer below.

DISCLAIMER

Although this product has been tested by the author, he accepts
no responsibility for any damages caused by the use or misuse of
this software. This software is distributed 'as is' with no warranty
expressed or implied. The author will not be responsible for any
losses incurred, either directly or indirectly, by the use of this software.
Use this software entirely at your own risk. If you do not agree
to these terms then you must not use this software.

INSTRUCTIONS

Unzip package into a new dirrectroy.

WACARS.INI needs to be then copied into your Windows directory.

Connect the output of your radio to the line-in/aux-in of your
sound card.

Adjust the recording level using your mixer utility to achieve
a signal level of about 50%-70% when an ACARS signal is present.
You also need to make sure that there is no 'pick-up' in the
background. I find that I get loads pick-up from my monitor.
I managed to get rid of it by adding some inductance to the audio
lead and moving the radio to the other side of the house.

All the last 10KB of decoded data is displayed in the raw data
log. Any packets which are of the correct format are then displayed
in the message log. The aircraft registration and flight number
are also loged in the appropriate lists. The message log shows

the last 10KB of message data but automatically logs all the data
to a date stamped file. The flight and aircraft logs can be saved
too.

A log for a specific aircraft can also be created. This log will
filter off all the messages for a specifed aircraft.

Sample Screen Shot

WACARS FAQ

Q.1. My Sound Card Setup only mentions 11Khz 22Khz and 44Khz..
WINDOWS 95 only mentions CD quality, radio quality....

A. Don't worry, the software attempts to setup the non-standard rate
when the program starts. If your soundcard can't do 19K2 it'll
tell you.

Q.2. What frequency should I use?

A. Europe 131.725
US. 131.550,130.025,129.125
Asia 131.450
Air Canada 131.475

Q.3. Where can I find more information about ACARS?

A. Click Here

Q.4. How do I make "Unknown Airlines" who's callsign is "UN" to the
system?

A. Add the line "UN=Unknown Airlines" to the [Airline] section of the
wacars.ini file. Only the first two characters are used though. ABC=ABC
Airlines will have to be shortened to AB=ABC Airlines.

Q.5. I want to make mode label "AC" expand to "My new message". How do I do
that?

A. Add the line "AC=My new message" to the [Modes] section of the wacars.ini
file.

More FAQ's as they come in........

I have been following this thread in Rec.Guns (I do have more than one hobby which is why I am broke). It is not Radio Shack, it is the concept of mass marketing. The same BS that we sometimes face about radios is also given in other areas. Just go to Lowes or Home Depot and listen to the kids give advice on plumbing, electrical or so forth (always look for the "old guy", he usually knows what he is talking about).

Read this and enjoy:

I am confused- what do scanners have to do with classical amateur radio-
which got along just fine before this relatively recently introduced
device came on the market.
I am not sure what is meant by wide-banded ham gear, but if this is
just the stuff well suited to transmission OUTSIDE the legally assigned
ham-bands, I can't see why a real ham cares. This is stuff for the CB
"free-banders", pirates operating in the short-wave bands and the like.
It is also the stuff which makes enemies for the ham community.
I would object if reception is limited to only ham frequencies.

Bob

PS I have trouble with terms like "serious Damage" and "vicious pack of
poison" if the above interpretations are correct.

Hi Bob, maybe a specific question will shed some light. Will this bill
make my general coverage IC-706 illegal? Out of the box, it will
legally receive portable phones around 47MHz if I remember correctly.

We received an outstanding response to our first "call
for articles," and now it is time to do it again.

QST magazine is looking for good material to publish,
from hams and nonhams alike. We'll consider almost anything,
from simple "evening" projects to complex discussions of
radio science.

We pay, too! Not enough to finance your car or house, but certainly
enough to help pay for some, if not all, of the parts that go into your
project. (Why snitch from the household kitty?)

To submit an article for consideration, send it to:

ARRL
Attn: Paul Pagel, N1FB
225 Main St
Newington, CT 06111

or e-mail a copy of article *idea* to:

ppagel@arrl.org

If you need an Authors' Guide, you'll find one at:

http://www.arrl.org/qst/aguide/#QST

Photographers: We're always looking for QST
cover material. Before sending your photos, check
out our requirements on the Web:

http://www/arrl.org/qst/cover_photo.html

The way to do it is to find some hams in the military. Belgium has NATO and SHAPE, Germany has all sorts of troops. I mean, these guys could have it shipped via US mail and give it to you. Now, you must remember that this is considered to be black market trading by both your government and the US military. They just do not like anyone beating that 17% VAT (national sales tax).

LD Systems is heading the Technical cordination of the event. See if
you can find there freq. A California company is heading the laser
production, with a Dallas and Conroe company providing some of the ariel
lights. LD Systems uses an 800MHz system, I believe. When I was there,
I had a Motorola Visar radio, and I think that they had approx. 10
channels. The clearcom intercom system is digital though.

Your were trying to cut the wrong deal. The major manufacturers
would LOVE to participate in a mass-market channel. You were
not offering such a channel.

> With out naming names, I will share with you what I had to do to get a
> "franchise" to sell a specific national brand.

You miss the point Steve. Having a scattered group of individuals
trying to set up franchise ham stores is exactly the WRONG way to
pull this off. You've proved to yourself why so many independent
amateur radio stores have gone "boobs up" in the past decade or so.

I don't know the business models of our two major domestic
manufacturers of amateur equipment, but I personally think
that a tri-lateral deal between Ten-Tec, MFJ, and Tandy
(Radio Shack) could be a viable channel (plug in TimeWave,
HyGain, and ETO while we're dreaming) which would grow the
business of all the players, while putting amateur radio "in the
view" of the US public.

Selling via "1-800" numbers from ads in the back of "insider"
magazines like CQ and QST will NEVER expand their markets,
and one more low-budget storefront in lovely downtown Landing,
NJ is of no use to anyone except your bankruptcy attorney. The
"big guys" would be silly to deal with you at that level.

The VHF/UHF gear that has wide band RECEIVE capability may be
outlawed under this proposed legislation. Most current amateur gear for
2M and 440 have the ability to receive outside the ham bands, which is
frequently a big plus, especially for any ham involved with Civil
Defense/Emergency Management.
I recently used my ability to receive out of band to track a signal
which was interfering with my fire departments emergency communications.
I don't want this legislation to pass.
I would also like to mention that many police officers and
firefighters, myself included, rely on scanners in emergencies because
our departments cannot afford radios for everyone. You might consider
working against this legislation as a means of supporting your local
police and fire departments, unless your municipality is extremely
wealthy and can afford radios for every emergency worker.

Erv,
one of the best things to do is this:
Fax a copy of the bill to every news agency in your city. Fax to every TV station, Radio Station and newspaper. this bill in its current form would also limit said news agencies from gathering information "LIVE" or using said information gathered as part of a breaking news story. This goes a lot further than just amateur radio.

I also suggest that any of the rest of you that have fax machines (or faxmodems and software) do the same. the more people KNOW about this, the less likely that the bill will pass.

Bill and the rest of the gang ...

Gate 3 callsigns are being issued ... as of today, 9/17/97. I don't know how many have been issued, but I know of one ... mine.

I suspect there will be a big batch of them available on the various callsign servers tomorrow.

Tomorrow, you can check http://www.arrl.org/fcc/fccld.html

or you can call 1-888-225-5322 and follow the voice prompts.

I applied electronically on 8/6/97, and I was issued my first choice, W0ABC.

Sorry Hans, I dealt with the major chains currently (channels as you refer to them as) They are not interested AT ALL!! NO VOLUME...NO QUICK TURNOVER. Couple that with t he fact that the training they provide is practically nil. Couple that with the fact that the manufacturers would have to accept 100% unconditional returns...nope, never , ever happen

I've proven nothing. I found out way before that. What I did find is that the existing outlets have a virtual lock on the industry and there isn't anyway a newcomer is ever going to get a foothold.

Independent stores have gone out for one reason, they can't compete in today's economy. It's easier to pick up a phone get a price place an order pay with a credit card and wait for FED Ex to make a delivery. It had nothing to do with being independent, just as downtown shopping areas are virtually none existent due to malls, malls are finding it hard to compete with mail order...LOWER OVERHEAD equal LOW PRICING

You obviously have never been in the consumer market or had a marketing background. It will never work. Again, the major outlets would need to see quick turnover of inventory, quick return on their investment and a

hell of a gross profit margin. Do you honestly think this is a new idea. I can tell you definitively that a major chain HAS looked into this less than a year ago and realized that there was NO money to be made against the HRO's and AES's..the 1-800 sellers you refer to

The manufacturers would have to handle all returns. That means Hans, if you buy that TenTec amp and decide you don't like it and return it, the manufacturer HAS to take it back. They have to pay freight to get their own product back, they have to refurb it and then they have to sell it as USED or refurbed. This is not a volume business that they want to get into.

Hans stupes to insults here (class act for a vice director of the ARRL, especially from the backwaters of Miinesota)

> Selling via "1-800" numbers from ads in the back of "insider"
> magazines like CQ and QST will NEVER expand their markets,
> and one more low-budget storefront in lovely downtown Landing,
> NJ is of no use to anyone except your bankruptcy attorney. The
> "big guys" would be silly to deal with you at that level.

Number one, I'm surte you've never been to Landing, as there is no downtown. It's a lakeshore community and a very nice one at that. In fact this entire section of Morris County is still pretty rural, unlike most of the state. As far as bankruptcy attorney's, I'm sure based on your sterling posts of the past, you've first hand experience, if not I am sure that Roger would be more than happy to handle your case. Quite frankly, the big guys were more than willing to deal with me. MONEY TALKS Hans, and at the time, I had extremely liquid assets to play around with. And low budget??? seeing as we've never met (I'd remember meeting an opinionated person like you), my business plan at the time was ANYTHING but low budget.

Maybe you should get a clue and realize your pipe dream has sprung a leak. I would suggest before you stick you foot in your mouth (as usual), you might want to clear it with the ARRL. I don't think they'd approve of their vice directors playing the perpetual boob (and yes, that's an insult leveled squarely at you Hans)

Learn of what you speak, before spouting off. It makes you look ridiculous trying to BS you're way through stuff you've no clue about

I am looking for information about AEA's Pacratt for Windows. How does it run under Windows 95? Also, since they have gone out of business, would you recomend buying it or some other product that runs on Windows 95. I understand that someone has bought the program from AEA and is going to sell and enhance it. Does anyone know who and a phone number for them.

Thanks

And the big time radio manufacturers and the ARRL wonder why sales of
equipment is declining. It is just like anything else, you want to kick
the tires and test drive it. You can not do that via mail order. I agree
completely with your analysis Steve. I had a friend in the Philadelphia
area in the early 70s who had a ham store. He was handeling the Signal One
line and was quite successful with it until they told him that his minimum
inventory purchase would increase by 500%.
Sometimes i really believe that the big players in the equipment field do
not understand basic marketing principles. They tend to sing to the choir
and in publications which already reaches an established clientel, but not
outside of it. I remember the magic of the ham stores in the Philadelphia
area in the 60s. It is almost gone today.

4418. Need advice on repairing old FT-101

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-17 00:00:00 UTC
From: Ashok Srinivasan <ashoks@engr.sgi.com>
Message-ID: <3420A7A2.2781@engr.sgi.com>
Source record: 190242
Cross-posted to: rec.radio.amateur.misc,rec.ham-radio

Hi,

I bought an old FT-101 from a guy a few years ago for $250
(who told me it was in good condition) and found that it is in
bad shape recently based on the estimate from the Yaesu service
center ($150parts and $250 labor).

I asked them to send it back to me with the list of
fixes needed so I can do it sometime on my own. I'm not a ham yet
although I'm familiar with superhet. ckts to some extent. Is there a
forum for ft-101 owners on the net? Luckily I do have the user manual
and the service manual so I can start from there. However it would be
good to have more info.

Any advice on fixing the radio would be apreciated. I plan to
buy another ft-101 type rig soon to take to India and I'd also like to
know what the various versions have/ dont have and how easy they
are to maintain (B, E, EE, EX, ZD). The reason I want to go for an
old radio is that servicing a digital radio in India would be
impossible if something went wrong.

Thanks
Ashok

P.S. I'm saddened by being taken advantage like this. Although it
definitely was stupid of me to buy something I couldnt fully
evaluate, I was under the impression that ham swaps were
generally more ethical. Isnt that more or less true?

The comment I would like to make will be brief..
the call is KE4UTQ a new GENERAL I did the code because
it was REQUIRED and for all the EXTRAS out there that
CUT DOWN NO-CODE TECHS just take a listen to your ADVANCED
and EXTRA portions on 80 meters.. If the no-codes used that
kind of talk no one would talk to them.. So cuss fight and
be better than a NO-CODE but we are not useing 1500 watts
on a band that will talk around the world to use PROFANE
SPEACH and act like a bunch of BUTTHOLES.. For all us good
GENERAL CLASS and above this does not apply...

Not really brief I got carried away...73 to all

You need to find a tester with multipin (4,6,7 pin) sockets, and
a loctal socket, too. Strange, a lot of testers, even through the
1960's usually had those.

>Any suggestions? I guess if I could find tube equivalents, I could test

There are older substituition guides that have rewiring instructions
(or you could figure them out from a tube manual), so that you could
build adapters for octal sockets. The classic RCA Receiving Tube
Manual give equivalents

Harry Hurst <hhurst@delaware.infi.net> wrote:

"Even if you could operate on CB with your ham equipment, who the hell would want to?"

I agree, *if* you're referring to legal power levels. The reason some folks like to use amateur HF rigs on CB is simply to be able to do certain *illegal* things -- such as using excessive power, or "sliding" around within the band -- which aren't practical on normal CB radios.

Of course this refers to transmitters. It's certainly not illegal to use a more advanced *receiver* on CB, since that doesn't have an adverse impact on other spectrum users. Oddly enough, last time I looked the antenna restrictions on CB radios also applied to any receiver that covered the band and was used in the same room as a CB transmitter; apparently the reason is to prevent someone from having two antennas, one legal and one not, and claiming that the latter was only a receiving antenna.

4427. Instructions For Kenwood TR-2600A

Newsgroup: rec.radio.amateur.misc

Hello:

I just received a Kenwood TR-2600A 2m HT to use while my illness makes me unable to leave the house, but while the rig is in very good shape and works perfectly and has just about all the goodies that one can get, it is missing the manual.

I am hoping that someone could send me some basic instructions on how to work the thing! Things like how to access the memories, how to set the PL, how to change frequency, how to set the offset, stuff like that... Just day to day operations.

What-ever folks think that might be of use. I found ArtSci's site with the replacement manuals, but who has the $20 + shipping that they want! Not me.

An E-Mail reply would probably be best since there isn't much use in taking up more group bandwidth and my ISP's news server is notorious for never getting articles. :)

Many thanks!

Take Care & 73

Steve:

Well put! We need more Elmers in this hobby like a couple I have been working with. My endeavor to upgrade to General Class is going well and I anticipate making the jump this month at the testing session in Corunna, MI.

Our hobby, unfortunately, is over-run with a generous supply of crusty, ill-tempered ol' farts who are hell-bent on keeping the hobby closed or greatly limited. In our club, you can go to the meetings and other club functions and see this all the time. We do, however, have a handfull of them who want to see the hobby flourish and offer help whenever it's needed....often taking their relaxation time to teach the code, build antennas, etc.

Let's hope our hobby does not die on the vine....and that more Elmers will come forward so we can enjoy many years on the Bands.

Hi Gang!

Well, our elected officials are trying again! And this time, they are
out to do some serious Damage to the Amateur Radio Hobby!!!

Bill HR2369 is a vicious pack of poison, which, if passed, will end
Amateur Radio as we know it....making the buying and selling of scanners
and wide-banded ham gear ILLEGAL!

For more information, visit the information page, which is located at:
http://www.kb8uyz.com/kb8tnq/scan.htm Tell your friends about this and
let them know we have included a link to find your
representatives.....and email them. Let's stop this thing before it
gets any farther!!!

7-3,
Erv KB8TNQ

I was somewhat stunned when I read Rafuse's 1960s paper on Mosfet mixers (Which sired a lot of the latest technology) where he quoted the measured intermodulation performance of the R390. I measured the Racal RA17 and RA117 and found them to be even worse. Some of the valved antiques were quite good in this respect, simply because they ran their various stages at high-ish power levels forced by available devices, but these radios belonged to an early era where selectivity was very difficult and drift was rife.

I think that the homebrewer can still produce a better radio than he can buy, but that the design would have to be quite different to things published N years ago. The latest commercial jobs are not without flaws. It would be a massive job to try to equal their versatility, but a mode-specific radio of appreciably higher performance is a reachable goal. Look at some of the front-end stuff published by Makhinson and improved by Horrabin. DSP can be designed on a PC, and run on a development kit board, but the Achilles heel of the DSP radio is that ADCs are not yet available that will enable them to equal all of the capabilities of the best analogue radios. This will change, no doubt, but the first breakthroughs will probably involve a bit more hand-tweaking than could be justified in a commercial rig.

The information is out there. Snippets have appeared in Radcom/QST/QEX/Communications Quarterly/RF Design and there is a lot in Analogue Devices apps notes and data sheets. As Gary says, it's not as easy as digging out 30 year old magazines but it's certainly fun.

Cheers
David GM4ZNX

4433. ANARTS RTTY News Bulletin 976 14th September 1997

This is the Australian National Amateur radio Teleprinter Society

with our weekly Rtty Broadcast. We transmit on the following

frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)

7.045 MHz -3 0030 UTC VK2CTD (COL)

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)

14.091 MHz 0030 UTC VK2DPM (ALAN)

144.850 MHz (ax25 bbs) VK2CTD AT VK2WI

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily

those of the Broadcast Officer, the Relay Officers, or of the

Society.

COLS COLUMN

OUR BROADCAST OFFICER IS NOT FEELING VERY WELL THIS WEEK, SHE

WENT UP TO QUEENSLAND FOR A FEW DAYS AND HAS COME BACK WITH

WHAT WE USE TO CALL IN LONDON, THE DREADED LURGY, BUT MORE

COMMONLY CALLED THE FLU. SO I AM ONCE AGAIN YOUR BROADCAST

OFFICER THIS WEEK. HOWEVER DUE TO ONLY BEING TOLD APPROX 8 PM

ON FRIDAY, IT WAS IMPOSSIBLE TO GET THE IPS REPORT.

I HAVE RECEIVED THE PRELIMINARY RESULTS OF THE ANARTS WW RTTY

CONTEST FROM OUR CONTEST MANAGER. PLEASE BEAR IN MIND THAT

THESE ARE PRELIMINARY RESULTS AND ARE SUBJECT TO ONFIRMATION

WHEN THE CONTEST MANAGERS REPORT IS PUBLISHED.

HERE ARE THE FIRST FIVE PLACES IN THE WORLD IN EACH CLASS.

PLAQUES WILL BE SENT TO THE FIRST IN EACH CLASS, OTHER

STATION'S WILL RECEIVE A CERTIFICATE.

PLEASE NOTE THERE WERE ONLY 3 ENTREIS IN CLASS C.

CLASS A, SINGLE OPERATOR

PLACE CALLSIGN POINTS SCORED

1ST UN5PR 5,191,870

2ND OH2LU 4,247,844

3RD HA2SX 4.216.196

4TH K5DJ 4,037,680

5TH DJ3IW 3,750,956

CLASS B, MULTI OPERATOR

1ST OH3NE 5,138,640

2ND VK6GOM 3,649,550

3RD VE3FJB 1,677,040

4TH VE7OR 1,206,068

5TH VE6RAJ 865,186

CLASS C, SHORT WAVE LISTENER

1ST ONL383 750,100

2ND ONL3997 152,350

3RD DE0GAH 40,432

CONTEST MANAGER JIM VK2BQS INFORMS ME THAT HE HAS ALMOST

COMPLETED THE RESULTS, JUST A FEW MINOR PLACES NEED CHECKING.

I WOULD LIKE TO RE-STATE SOME OF THE CONVENTIONS USED IN OUR

VERSION OF THE DX NOTES APPEARING IN THESE BROADCASTS.

ONLY CERTAIN CHARACTERS, OTHER THAN THE ALPHABET AND FIGURES

1 TO 0, CAN BE USED IN RTTY, AND AMTOR. THEREFORE WE HAVE TO

GET AROUND THE PROBLEM, ESPECIALLY THAT CAUSED BY EMAIL AND

INTERNET ADDRESSES. HERE ARE SOME EXAMPLES

1. INVERTED COMMA'S ARE SENT AS A SINGLE INVERTED COMMA,

EXAMPLE : THE 'DX NEWS' REPORTS ETC ETC.

2. THE FUNNY LITTLE 'AT' SIGN (UPPERCASE FIGURE 2 ON A KEYBOARD). EXAMPLE : CDAVIES AT DSE.COM.AU

3. THE OTHER FUNNY LITTLE SIGN USED SOMETIMES IN INTERNET WEB PAGE ADDRESSES. IT LOOKS LIKE A SINE WAVE AND CAN BE FOUND ON YOUR KEYBOARD ON THE SAME LINE AS THE FIGURES, PLACED JUST IN FRONT OF FIGURE 1. THIS CHARACTER APPEARS IN OUR BROADCASTS AS : BRACKETS, TILDE BRACKETS.

EXAMPLE : HTTP://WWW.CLINET/FI.(TILDE)JUKKA/RTTY.HTML

WHEN REPLYING TO AN EMAIL REPLACE THE WORD 'AT' WITH THE 'AT' SIGN.

WHEN CONNECTING TO A WEB SITE WITH A TILDE SIGN INSERTED, REPLACE THE (TILDE) WITH THE APPROPRIATE CHARACTER.

FINALLY A WORD ABOUT THE VK2SG DX NOTES. THE VAST MAJORITY OF THE REPORTS ARE RTTY. OTHER RELATED MODES SUCH AS AMTOR, PACTOR AND CLOVER, HAVE THE MODE INSERTED AFTER THE CALLSIGN. (LOOK AT THE ENTRY FOR VQ9SS AT 1329 ON TUES, THIS BULLETIN).

SSTV REPORTS ARE NOW BEING INCLUDED, BUT IF YOU LOOK AT THE FREQUENCY OF THESE ENTRIES YOU WILL NOTE IT IS OUTSIDE THE NARROW BAND ALLOCATION.

ENTRIES REFERRING TO HF PACKET STATIONS ARE NOT INCLUDED.

73S FOR THIS WEEK DE COL VK2CTD.

++++++++++++++++++++++++++

VK2SG RTTY DX NOTES FOR WEEK ENDING SEPTEMBER 5, 1997.

Our information this week came from DJ3IW and the Central Europe DX Cluster DB0SPC, I5FLN and the IK5PWJ Packetcluster, OH2BUA WebCluster, W5KSI, WB2CJL, WX5L, W6OTC, K8SM, 9Q5PA, QRX DX, DXNS, OPDX/BARF80, and the NJ0M node of the Twin Cities DX Packetcluster Network.

Notes of Interest:

CAMEROON, TJ - Mark, TJ1US (ex-J5UAI) will try to keep the following Friday schedules: 1800-2100 14085 RTTY, 2100-2130 10104 CW, 2130-2200 14050 CW 0200-0400 7020 CW, and 0400-0500 3510 CW. QSL to NW8F.

MIDWAY Is., KH4 - The group operating from Kure (see below) may again activate Midway for a few days, following the KH7 operation.

MOLDOVA, ER - Chris, K4PC will be in Moldava 27 Sep. He hopes to obtain a license for operating CW/SSB/RTTY.

NEPAL, 9N - Rich 9N1RHM has promised to try to be QRV on RTTY for EU and NA when propagation permits. QSL via KV5V.

SAINT MARTIN, FS - If you still need this country, look for Eddie FS/EA3NY during the CQ WW RTTY Contest 27-28 Sep.

The VK2SG RTTY DX NOTES are also available on the Internet at reflector digital-d at st.rim.or.jp and the OH2BUA WebCluster at URL http://www.clinet.fi/(tilde)jukka/rtty.html

For next week's bulletin, send your bandpass and notes of interest to Randy, WX5L at W5KSI.(hash)NOLA.LA.USA.NA or by e-mail to wx5l at I-10.net .

73, good hunting de Jules W2JGR at W5KSI.(hash)NOLA.LA.USA.NA

EXCEPTS FROM THE ARRL DX NEWS NR 038

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Nikolai, UA9KM, QRZ DX, The 599Rpt, The Daily DX, The DXNS and Contest Corral from QST. Thanks to all.

WALLIS ISLAND, FW. Marcel, ON4QM, will be QRV from Sep 8 til Mid Nov. Callsign is unknown at this time. He will be active on 40 to 10 meters using SSB. He hopes to be active from Futuna Island for one week as well. QSL to home call.

ANTARCTICA. Roman, EM1KA, will be QRV from the Ukrainian research base at Vernadsky for another year. There is the possibility of some 6 meter operation from here. He is regularly QRV on 1827 khz at 0400z. QSL via JA2JPA.

SVALBARD, JW. Carlos, LA9PJA, will be QRV in Sep as JW9PJA. He will operate using CW, SSB, RTTY and PACTOR. There is also the possibility of some SSTV and satellite operation. QSL to home call.

++++++++++++++++++++++++++

EXCERPTS FROM THE OHIO/PENN BULLETIN NR 321.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA1S, N2AU, WB2YQH and WB2RAJ The 59(9) DXReport W3UR and The Daily DX, K4MZU, K4PC, W4WX, K7ON, K7BV, K8XP, AH0W/OH2LVG, DL7IO, EA3ELM, EA4DX, G3USF, G4BUE and DX News Sheet, OZ1LQH, T93Y

and VK3EW for the following DX information.

3D2, FIJI. Ron ZL1AMO is once again active from here as 3D2RW His length of stay is unknown and he can usually be found on CW (but he does work some SSB). Look for activity on all bands, especially the WARC bands. QSL via CBA.

8R, GUYANA. The 'DX News Sheet' reports that Tere (YL op and ex-XE1ASF and YJ8AS) will be active for the next two years as 8R1ASF. Her activity will be on 40-10 meters, including the WARC bands. QSL via XE1MD.

C6, BAHAMAS. Jon, EA2KL, and Lluis, EA3ELM, members of LYNX DX Group, will be active from Abaco (IOTA NA-080), from Nov 1-8th as EA2KL/C6A and EA3ELM/C6A. Their operation will be on CW/SSB on all bands (including 12 and 17 meters). QSL via their home callsigns.

HF BEACON NETWORK UPDATE. Martin Harrison, G3USF, the IARU HF Beacon Coordinator, states the ZL6B beacon is now operational in the NCDXF/IBP worldwide network on 14100, 18110, 21150, 24930 and 28200 kHz. The beacon is located near Masterton, New Zealand and runs 100 watts stepping down to 100mw. Meanwhile, the 5Z4B beacon is once more operational on the same frequencies but the 4X6TU beacon still remain off the air with transmitter problems. Currently 16 of the planned 18 beacons in the worldwide network are now in place.

KH7K KURE ISLAND (Update). With only a few weeks away for this DXpedition to take place, Frank Smith, AH0W/OH2LVG, from the Midway-Kure DX Foundation (MKDXF), provided OPDX with the following update. The following operators will be active from Kure Island Sep 26th through Oct 4th:

UA3AB - Andy Chesnokov SM0AGD - Erik Sjolund

KH7U - Kimo Chun W0MY (ex W0RLX) - Burt Myers

JA3IG - Yuhi Yoshitani N9NW - Michael Goode

K0EU - Randy Martin AH0W/OH2LVG - Frank Smith

WEBSITE FOR DXERS/CONTESTERS. Dennis, K7BV, Editor of the

National Contest Journal, reports the magazine now has a WEB

Site. Dennis states the site keeps current with information

regarding DXpeditions for contests coming up in the near and

far future. The NCJ website can be found at:

http://www.waterw.com/(tilde)ncj/xpedit.htm

++++++++++++++++++++++++++

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065

Australia, for such matters as membership and general

enquiries. Enquiries can also be made by packet to the

President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA

at VK2WI.

Email address for the Broadcast Officer is :

patl(at)conmusic.usyd.edu.au or patl(at)mail.users.usyd.edu.au

73s de Col VK2CTD Acting Broadcast Officer.

Well, hams generally are more ethical than used car salesmen
or TV evangelists, but they aren't saints. And you have to learn
the lingo. "Good" condition means most of the parts are still
there, and that most of the smoke and water damage from the
fire has been cleaned up. If you want equipment that still works,
it has to be labeled as in "excellent" condition or better. But
be wary, most amateurs are chronic cardboard box collectors.
If they offer the radio with the original box, the thing that may
be in "excellent" condition is the shipping box, not the radio.

Ok, I'm having a little fun. Sorry you were burned. My personal
rule is to never expect the radio to work unless I've seen it operate
under power. And I never expect a used radio to be flawless sight
unseen. If the price is right, I'll buy anyway, figuring I can fix it
up. That's half the fun of amateur radio anyway.

There's nothing much you *can't* fix in an old FT101. Mechanical
condition is the most important thing. The condition of the electronics
isn't much of a consideration. Most parts are still commonly available,
and troubleshooting and replacement is straightforward. Yaesu's shop
charges seem to indicate that the radio needs no more than 2.5 hours
of bench time to fix, and it probably needs less than $50 in repair
parts (buying parts from the radio manufacturer should always be
a last resort, the markup is killer). So figuring your hobby time as free,
you still got a good deal, but at $300 net instead of $250.

> for all the EXTRAS out there that
> CUT DOWN NO-CODE TECHS just take a listen to your ADVANCED
> and EXTRA portions on 80 meters..

Here are a few points to be considered:

1) There are NO generalizations that can be made about one
class of licensees being "better" operators than any other.
2) There are examples of bad, careless, and rude operating on
every single band from 160 to 2 meters. Others? I don't use 'em.
3) SSB pileups can be rife with stupid, ignorant operating.
4) So can CW pileups. Heard Island, anyone?
5) Some of the biggest racist, dumb-f*$k, loud-mouth morons
can indeed be found on 75m sideband and (even) AM. 20m
will occasionally sport similar behavior.
6) I have heard harassment and interference on 2m FM, as
well as prattlers who chatter endlessly on repeaters
during rush hour. More rudeness.

SO!!!?? Why bother with ham radio!? Get with it, people. This
absolutely endless discussion/argument is so incredibly boring!
Why is it so noteworthy that there are assholes in ham radio?
There are assholes in every single walk of life! Selfishness,
arrogance, and carelessness are extremely prominent traits in
public life today. Did you drive to work today? How many "idiots"
did you take note of on the road?!

As an Extra, I can honestly say that I have never seen PROOF of
the alleged bad operations of these "ubiquitous no-coders." I
have, however, heard countless higher-class (as in license) hams
being assholes on the air. There is no monopoly on stupidity.
STOP ACCUSING EACH OTHER! Most of it is done out of ignorance,
man. Each group resents the other so much, and so much without
substantive grounds, that it's truly sad.

Stop mentioning "...listen to the behavior on 80m SSB." Umm, NO,
I would rather exist in a perpetual QSY from that particular
band segment. Why devote energy to hateful stuff? I'd rather be
down on 30m or 17 or 15 or... you get the idea. A little positive
attitude is what is sorely lacking in this and the .policy groups.
When I spend time on the air doing what *I* like to do, I rarely
encounter cause for such profound bile spewage. Only when reading
these threads does this happen.

Any constructive comments?

NEWS RELEASE
International Amateur Radio Union

15 September 1997

For immediate release

The Administrative Council of the International Amateur Radio Union met in Beijing, China, September 13-15, 1997. The meeting took place after the IARU Region 3 Conference. The following actions were taken:

1. The ITU meetings at which IARU representation will be required during the coming year were identified and the appointment of representatives was announced by the President after consultation with the International Secretariat. The Council reaffirmed that in the selection of representatives to such meetings, appropriate consultation with the regional organizations shall take place.

2. The participation of the Regions in the activities of regional and sub-regional telecommunications organizations was reviewed. These organizations are assuming increasing importance.

3. The Council agreed on instructions to be given to the IARU delegation to the 1997 World Radiocommunication Conference (WRC-97). The International Secretariat will update this material as new information becomes available. The core delegation will consist of Larry Price, W4RA, Michael Owen, VK3KI, and Wojciech Nietyksza, SP5FM.

4. The status of the action plan developed by the 7 MHz Strategy Committee and previously adopted by the Council was reviewed. Following WRC-97, information will be sent to member-societies updating the plan in the light of decisions taken at that conference.

5. The second report published by the Future of the Amateur Service Committee (FASC) was considered. The Region 3 Conference has shared the results of a comprehensive review of the FASC report to the conference. These comments will be incorporated in a further report to be circulated as the next step in the

process of developing an IARU position regarding the possible revision of Article S25 of the international radio regulations. The position will be developed by the Council following the receipt of the final report of FASC in September 1998.

6. A budget for 1998-2000 was adopted as submitted by the International Secretariat. The budget includes provision for financial contributions from the three regional organizations to defray a portion of the expenses that are assumed by the International Secretariat beyond its constitutional obligation.

7. Planning for IARU participation in the next World TELECOM (Geneva, 1999) was reviewed. A report was received from Region 1 on their preparation for Amateur Radio participation in Africa TELECOM 98 in South Africa which is being organized by the Region in accordance with IARU policy.

8. The IARU Strategic Plan for the Development of Support for Amateur Radio was updated. The associated action plan for 1998-99 was approved and has the goal of employing resources to enhance the support for Amateur Radio in Africa. The implementation of the plan will be coordinated between the International Secretariat and IARU Region 1.

9. The present and anticipated future requirements for radio spectrum allocations to the Amateur and Amateur-Satellite Services were reviewed, updated, and approved.

10. An Ad Hoc Monitoring Service Review Committee was appointed to review the terms of reference of the IARU Monitoring System and make such recommendations as it may deem appropriate. Pedro Seidemann, YV5BPG, was appointed chairman.

11. An Amateur Radio Outlook Committee was established, in the light of changing technology and the Internet, to make general recommendations as to the future growth and development of Amateur Radio. Tom Atkins, VE3CDM, was appointed chairman.

12. A resolution was adopted encouraging the promotion and development of Amateur Radio digital technology.

13. The Council recognized the need to review the structure of the IARU to ensure its long-term viability, and as a first step, decided that an ad hoc committee be designated by the president to provide a preliminary report for the next meeting of the Council.

14. Reports were received from the international coordinators and advisers who report to the Council on specialized areas of interest, and they were reappointed to new terms. They are Robert E. Knowles, ZL1BAD, IARU Monitoring System; John G. Troster, W6ISQ, IARU Beacon Project; Hans van de Groenendaal, ZS5AKV, IARU Satellite Adviser; and Christian M. Verholt, OZ8CY, IARU EMC Adviser.

15. Finding that the work of the Ad Hoc Beacon Committee could be considered complete, the members were thanked for their valuable contribution and the committee was discharged.

16. The theme for World Amateur Radio Day, 20 September 1998, was selected as "Amateur Radio -- Communicating Worldwide for Three Quarters of a Century." The theme was chosen in recognition of the 75th anniversary of the first transoceanic two-way amateur communication, between France and the United States, in November 1923. The theme of World Amateur Radio Day for 1997 is "35 Years of Amateur Radio in Space." Beginning in the year 2000, World Amateur Radio Day will occur in April, on the anniversary of the founding of the IARU in Paris in 1925.

17. The next regular meeting of the Council will be held in Caracas, Venezuela, beginning on October 3, 1998, following the IARU Region 2 Conference.

The members of the Administrative Council are IARU President W1RU, Vice President VK3KI, Secretary W4RA, and regional representatives PA0LOU, SP5FM, VE3CDM, YV5BPG, HL1IFM, and JJ1OEY. Additional regional observers invited to be present were DF5UG, LU2AH, and VK3ADW.

4439. ARLB055 FCC issues Gate 3 call signs!

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-18 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb055.1997@arrl.org>
Source record: 190164
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB055
ARLB055 FCC issues Gate 3 call signs!

ZCZC AG55
QST de W1AW
ARRL Bulletin 55 ARLB055
From ARRL Headquarters
Newington CT September 18, 1997
To all radio amateurs

SB QST ARL ARLB055
ARLB055 FCC issues Gate 3 call signs.

Get ready to remember another batch of new call signs. Six weeks to the day after the opening of Gate 3, the FCC began processing vanity call sign applications. FCC personnel in Gettysburg, Pennsylvania, had spent much of the intervening time clearing out a backlog of vanity applications filed prior to the Gate 3 opening and matching up payments with electronic applications. On Wednesday, September 17, the FCC issued some 600 vanity call signs to those who had filed applications on August 6, the opening day.

Applicants can check for new call signs at http://www.arrl.org/fcc/fccld.html or by using one of the other popular call sign databases.

Judging from the call signs turning up on the FCC database, some Advanced class hams took advantage of Gate 3 to obtain Group C (1x3) call signs where the suffix comprised either a first name (we spotted a Joe, a Don, a Ken, a Bob and a Gay, for example) or a set of initials. Perhaps apropos of his QTH, Gene Uliasz of Gun Barrel City, Texas, used Gate 3 to turn KC4WA into K5TNT. Formerly KF6CG, Georgia A. Lawrence of Manhattan Beach, California, obtained K6GAL.

Other applicants obtained new Group B call signs, sometimes trading one 2x2 in for another. For example, Karl Mortensen of Wakefield, Rhode Island, swapped KE1FK for KA1RL. Still others went for the snappy suffix. Charles Pharis of Kagel Cyn, California, turned in KK6NE for KA6USA. Michael Amaral of Walpole, Massachusetts, gave up W1IDP to obtain WA1AW. Along the same lines, Michael Esposito of Germantown, Tennessee, swapped WA2VXV for WA2AW. Yvonne Lane of Kingwood, Texas, gave up KF5MY for W5XYL.

A few, like ARRL West Gulf Director Jim Haynie, just shortened the prefix. Haynie went from WB5JBP to W5JBP. Others went for one

appropriate for their QTH. Teriann Miner of Palmer, Alaska, turned in her lower-48 call sign, KG0OY, for KL7AT.

The Iowa DX and Contest Club got WI0WA.

In all, it appears that the FCC received more than 1000 vanity call sign applications on August 6. Because earlier gates remain open, it's impossible to get an accurate count of applications filed solely under Gate 3, however. The FCC still has not indicated when it plans to open Gate 4, which will make the vanity call sign program available to General, Tech Plus, Technician and Novice licensees.

UU-encoded is not what many condsider 'binary'(In actuality all digital data is binary :-)). Many consider the term binary to refer to data that uses all 8 data bits of a byte, like an executable file. Back in the 'old' days when the net was in it's infancy, only about 10 years ago, a lot of 'binary' files were sent as E-mail. A lot of data ports on Unix and DEC os systems that were hooked to modems were intended to be used by ASCII terminals. Hence, they used only supports 7 bit with either even or odd parity. These ports were also used for the dial out to another system to get mail. So, in order to send a 'binary' file it had to be converted to only use 7 bits. That is what uu-encoding does, takes 8-bit data and 'makes' it 7-bit. UU-decode was then used to convert it back to the original 8-bit data.

Until about 7 years ago I did not have ftp from my place of work. In order to get files from Simtel I E-mailed a request to an ftp server at Univ North Dakota(I think). It would ftp the file from Simtel, uu-encode it, bust into chunks < 64K (some mailers couldn't handle files any larger) and mail the pieces to me. I would then recombine the pieces and run it thru uu-decode and (hopefully) I had the original .zip file.

End of Net History 101.

4443. Linux/unix Kenwood computer control program

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-18 00:00:00 UTC
From: Jeff Pierce <piercej@preferred.com>
Message-ID: <342159F8.7210@preferred.com>
Source record: 190168

Kenwood TS-140/440/940 amateur radio transciever control program for Linux (Unix) systems is available from:

http://www.preferred.com/~piercej

This program utilizes the xforms library that is available for many different Unicies including Linux, FreeBSD386, Solaris, etc. Xforms is available from:

http://bragg.phys.uwm.edu/xforms

I am distrbuting linux binary form and SOURCE code so it can recompiled for your flavor of Unix. It only requires the above xforms library.

My program presents the user with a reaonable likeness of a Kenwood radio faceplate complete with frequency display, vfo selection, mode selection, split operation and RIT control. Limited radio memory usage is in this version.

Checkout my above homepage for a complete fucntionality listing and a graphic of the front panel controls.

It has only been tested on a TS-140 as that is what I have. However, it should work with the 140 & 940 as their copmputer commands are a superset of the 140.

Check it out.

Jeff Pierce, wd4nmq

Hi Zack
On a personal note, I would stay away from roof mounts of anything.
You have to get on your roof anytime you want to repair or change
anything. Consider putting your antenna on a tv tower, granted you
have to climb the tower but at least you don't chace slipping off the
roof.
Just my thoughts.

Tom,

Try this one. http://www2.cajun.net/~bfolse/ It takes awhile to load but it's
a great ham radio site complete with cajun music.

4453. Radio Shack axial electrolytic caps polarity markings?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-18 00:00:00 UTC
From: Ron Hardin <rhh@research.att.com>
Message-ID: <5vsi6o$r18@bgtnsc03.worldnet.att.net>
Source record: 190178

What's the polarity convention for axial electrolytic
capacitors. The Radio Shack 220 mfd 35v axial electrolytic has

one end:
1. bottle-neck constriction
2. black end covering
3. arrow (sort of) pointing away from that end

other end:
1. silver end covering
2. arrow (sort of) pointing toward that end

Which end is + and which - ?

Hi Ashok
You may disagree with this but if you are not technically inclinde and
good at radio repair, you might reconsider and allow yeasu to repair
the radio. Granted the cost is something more than you planned but

you could also ask them to give the radio a strong going over, cleaning etc, Repairing a radio by remote control is very difficult.
It has been a while since I have seen that model of radio but I think it has one or two tubes in the final and possibly a tube driver, I believe all else is solid state. Once you get that radio is good condition you should then be able to take it to India.
Also, what is the electrical power distribution in India.

Hey,
I've got a Sony CD player AM/FM radio and I get rotten FM reception.
There are no external FM (or AM) screws for me to hook in an external
antenna. I was going to put the cable from the cable TV into the antenna
jacks...but there aren't any means of connecting it to the radio.
Can I solder leads onto the telescoping antenna then attach the Cable TV
/FM reception cable to those wires?
Is the telescoping antenna for FM . . .or AM??

Thanks

As a "No-Code Tech" I am sometimes chided a bit by fellow amateurs who hold a higher class of license. Rather than walk away mad, I ignore it or even come back with a humorus retort at which point the discussion goes back to 'normal chit-chat'. Most (haven't counted but I'd guess the 99% range) hams I associate with in the club I am in, in the RACES group and on the local repeaters I use judge folks by their personality, operating habits and overall knowledge. When working 6M SSB I have NEVER been snubbed by a ham due to license class (which in the '6' region is not always too apparent from your call sign), likewise when working 2 meter or 70cm simplex. Now I won't say it never happens, just han't been my experience.

If you are a 'no-coder' and the hams you deal with are putting you down for your license class get off your duff and find a new group to hang with. If you want to gain a higher class license, do so at a pace you are comfortable with. For those of you holding General and above, if you don't want to deal with me due to my being a 'no-coder' - we probably don't have much to say to each other anyway so it's probably no loss to either of us!

Just had to get my opinion in after reading these debates for so long.

Howard, KE6MAK

Fine. He can list those, then, if that's his assertion.

>full of bullshit. It is my guess that you need to read more carefully
>before you try to put somebody down.

I did read it carefully. I just read it, carefully, again. I see
nothing which indicates your interpretation is more valid than mine.
The writer has an obligation to make his writing clear to his
audience.

In any case, the statement was ludicrous, unverified, unverifiable,
and illogical, no matter how you choose to interpret it. It was just
another lame putdown of CB radio. It implies that because CBers are
allegedly inferior to hams in their operation that this somehow makes
anything done on ham radio OK.

As presently phrased, yes, along with most other 6 meter gear,
scanners, converters, even some TV tuners with wide range might
fall prey. It's lousy law to protect something that the users should
know isn't private. I wasn't particularly upset that HBO was able
to scramble and then seek legal action against people who illegally
decode their signals, but requiring everyone to give up listening
to protect people who should realize that what they say can be
heard.

Herr Mueller:

The US Congress has two bills in front that would ban the manufacturing and use and scanning receivers to include amateur equipment. Law enforcement, news media, everyone, no one would be exempt. Because of the pressure from large businesses such as Motorola, this hints of fascism. Things are not going well here. I wish that I was back in Kaiserslautern.

I think that you are on to something. Look at gun stores. By law there is no mail order. You go in, talk, handle and often by a new toy/tool. The same with fishing equipment. People like the hands on feel, especially in this age of high tech. It would help if there was a national chain that would handle Ten-Tec, MFJ and such. I like shopping just as much as any woman. Just not for the same things. Thing about going thru Lowes or Home Depot.

R&L Electronics was in Indianapolis. Boy do I miss being able to go down there and look at things. Before that Gramham's Electronics was downtown Indy. I just miss the hands on approach.

Megatrends was right. The more high tech we get, the more important high touch (personal service, hands on) becomes. Look for barbers to become highly paid.

4468. Help with ham links

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-18 00:00:00 UTC
From: jwilson@pressenter.com

Hi everyone. I have been asked by my radio club to upgrade our very old web page and I wanted to be able to insert links to useful or fun pages about our hobby. However, rather than spend months browsing search engines I was hoping I could get some suggestions from you folks and save some time. So, if anyone knows of some useful, fun, or neat ham web pages could you please pass the info on to me?

Thanks very much!

Jeff

Jeff,
Check out this location:
http://www.meaning.com/pointers/wwwvl-ham.html

It is one of the most comprehensive web pages I've seen to date.
You will find some useful links there.

George, did you find the ham store, or did the ham store find you?

(see my previous post in this thread if you don't understand the
question)

Source record: 190254

I am having the roof on my home replaced and am considering having a roof-top tower put up to hold my AEA Isopole and Isoloop. Has anyone out there had any experience with these? Do you have any tips on installation? What brand do you recommend? (I know of only one mfgr. of these). Are there any articles in ham magazines about this subject? Should it be grounded? Lightning protection? Any info or suggestions will be greatly appreciated.

P.O. BOX 860 CROWS NEST NSW

This is the Australian National Amateur Radio Teleprinter Society

with our weekly Rtty Broadcast. We transmit on the following

frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)

7.045 MHz -3 0030 UTC VK2CTD (COL)

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)

14.091 MHz 0030 UTC VK2DPM (ALAN)

144.850 MHz (ax25 bbs) VK2CTD AT VK2WI

INTERNET RADIO-INFO-DIST AT UCSD.EDU

YOU CAN ALSO GET A COPY OF THE BROADCAST ON SUNDAY AFTERNOONS

BY CALLING VK2CTD ON 3542 KHZ, USING EITHER AMTOR OR PACTOR

MODES. CONNECT TO HIS MAILBOX AND TYPE H FOR HELP. LIST THE

MESSAGES AND YOU WILL FIND THE CURRENT CAST LISTED.

Views expressed in this news bulletin are not necessarily

those of the Broadcast Officer, the Relay Officers, or of the

Society.

A.N.A.R.T.S. News Bulletin 975 7th September 1997

COLS COLUMN

I HAVE THE HONOUR TO BE THE BROADCAST OFFICER THIS WEEK, IF THE

CAST DOES NOT LOOK THE SAME AS NORMAL, IT WILL BE THE LACK OF

EXPERIENCE ON MY PART. YOU WILL FIND THE IPS REPORT IS RATHER

LONGER THAN USUAL. THERE WAS A LOT OF SOLAR/GEOMAGNETIC ACTIVITY

DURING THE PERIOD AND I DECIDED TO PUT AS MUCH IN AS POSSIBLE OF THE INFORMATION SENT TO ME BY FAX FROM THE IPS SERVICE. IT MAY HELP YOU DECIDE WHETHER THE NEW CYCLE IS HERE. MY THANKS TO THE THE IPS DUTY FORECASTER FOR HIS HELP AND ADVICE.

IT WAS MY HAPPY DUTY RECENTLY TO SEND A PACKET ON BEHALF OF ANARTS, TO GEORGE VK6GM.

THE OCCASSION WAS TWOFOLD, FIRSTLY, GEORGE'S '94TH' BIRTHDAY AND SECONDLY, HIS FORTHCOMING MARRIAGE TO BETTY IN OCTOBER. GEORGE IS A MEMBER OF THE RAOTC AND RECEIVES THE ANARTS CAST IN W.A.

THIS WEEK I RETURN TO THE 'EARLY TELEGRAPH' SERIES.

IN A PREVIOUS ARTICLE IN THIS SERIES YOU MAY RECALL THAT COOKE AND WHEATSTONE CONSTRUCTED A TELEGRAPH THAT UTILISED NEEDLES WHICH WERE DEFLECTED BY A MAGNETIC FIELD. THEY LATER BUILT A 5 NEEDLE TELEGRAPH WHICH COULD TRANSMIT AND RECEIVE ALL OF THE ALPHA AND NUMERIC CHARACTERS PLUS OTHERS.

AFTER THIS TIME THE TWO MEN BECAME INVOLVED IN DISPUTES BETWEEN THEM WHICH MARRED THE PARTNERSHIP AND THEIR PERSONAL FRIENDSHIP. COOKE PRODUCED EVIDENCE THAT HE HAD CONSTRUCTED OTHER DEVICES THAT WERE NOT WRITTEN IN THEIR PATENTS.

ONE SUCH DEVICE ENABLED MESSAGES TO BE TRANSMITTED BY WHAT COOKE TERMED 'RECIPROCAL COMMUNICATION'. THIS ALLOWED TRAFFIC TO BE PASSED IN EITHER DIRECTION, USING THE SAME TELEGRAPH, ALONG THE SAME WIRES. HOWEVER TWO WAY TRAFFIC WAS NOT ABLE TO BE CARRIED AT THE SAME TIME. THIS WAS A BIG IMPROVEMENT, PREVIOUS TELEGRAPH SYSTEM USED A TRANSMIT AND A RECEIVE DEVICE WITH THEIR OWN SET OF WIRES, AND THE SYSTEM WAS DUPLICATED TO TRANSMIT AND RECEIVE IN THE OPPOSITE DIRECTION. COOKE FIRST USED THIS SYSTEM WHILE AT HEIDELBERG BEFORE HE MET WHEATSTONE.

ANOTHER DEVICE HE CONSTRUCTED, HE CALLED THE 'DETECTOR'. IT CONSISTED OF A NEEDLE INDICATOR, WINDINGS AND CONNECTING WIRES. THIS 'DETECTOR' WAS A TEST INSTRUMENT THAT ALLOWED HIM TEST THE

CONTINUITY AND INSULATION OF A TELEGRAPH CIRCUIT. IN COOKE'S WORDS 'I HAD INVENTED THE INSTRUMENT WHICH I CALLED THE DETECTOR BY MEANS OF WHICH INJURIES TO THE WIRES, WHETHER FROM WATER. FRACTURE OR CONTACT ARE EASILY TRACED, AN INSTRUMENT IN PRACTICE WHICH IS NEVER OUT OF MY HAND AND WITHOUT WHICH THE ELECTRICT TELEGRAPH WOULD BE IMPRACTICABLE. NOW DAYS OF COURSE MUCH, MUCH MORE IS KNOWN ABOUT THE DETECTION AND LOCATION OF LINE FAULTS, BUT IT IS INTERESTING WHEN CONSIDERING COOKE BUILT SUCH A DEVICE OVER ONE HUNDRED AND FIFTY YEARS AGO. COOKE WAS OF COURSE SHOWING HIS SUPERIOR KNOWLEDGE OF THE TELEGRAPH TO THAT OF WHEATSTONE AT THE TIME OF HIS WRITING.

MORE NEXT WEEK 73S FOR NOW DE COL VK2CTD.

==========

Ips Weekly Solar and Geophysical Report

Week ending 4th 5th September

Summary 29th August to 5th September

Date 29 30 31 01 02 03 04

10cm 92 92 96 93 92 93 93

A 15 12 5 6 5 18 19(estimated)

T 32 30 27 30 26 36 36

Solar : Solar flare activity with a M1 flare at 2332 29 Aug with a short fadeout at 2335-2357, another M1 flare at 1230 02 Sep. Solar activity was low on other days and very low on 04 Sep.

Geomagnetic : unsettled on 29 30 Aug, quiet to unsettled 31 Aug, quiet on 01 and 02 Sep, unsettled 03 Sep until 2100, afterwhich minor storm levels were reached, unsettled to active on 04 Sep.

Frequenccies : near predicted monthly values for most of the period. They were enhanced greater than 15 percent at Darwin from 1100-1500 29th Aug. Spread F was observed during the night of 30 Aug at Hobart and Townsville, at Christchurch during the night of 31 Aug. At Darwin they were depressed approx 15 percent

0100-0700 on 01 Sep. Also on 01 and 03 Sep Spread F was observed during the night at Townsville, Hobart and Christchurch. On 04 Sep there were several MUF variations, from 30 percent depressed to 30 percent enhanced at Darwin during their day and close to predicted during their night, 30 percent enhanced to 15 percent depressed during Townsville's local day, 15 percent depressed at Hobart, enhanced 30 to 50 percent during the local day at Christchurch.

Comment by IPS : MUF's varied widely during the period 03/2300 to 04/0600 Sep in association with geomagnetic activity. The geomagnetic activity is believed to be associated with a coronal mass ejection observed at 0130 on 30 Aug.

Forecast for 05 to 11 Sep :

Solar : Predominately low, however, a Solar Region in the South East quadrant of the sun is showing growth.

Geomagnetic : Unsettled early in the week, then increasing to active to minor storm periods during 09-11 Sep due to a coronal hole.

Frequencies : Fair to Good early in week, then conditions are expected to decline towards end of week in association with the geomagnetic activity. Mid to high latitudes are expected to be most affected.

Supplied by the IPS Radio and Space Services.

Telephone : +61 2 94148300

Email : asfc at ips.gov.au

Internet : http://www.ips.gov.au/users/asfc/

Fax : +61 2 94148331

NOTES OF INTEREST:

MAYOTTE FH. Hermann DJ2BW and XYL Margot DL2DK, will be QRV from Mayotte Island from 9-22 Oct. as FH/DJ2BW and FH/DL2DK. Hermann states Low-Band (160/80 meters and RTTY) is preferred.

TAIWAN BV. Special prefix station BX0CQ will be QRV til 9 Oct QSL BV8BC.

KYRGYZSTAN EX. Valery EX0V is active on RTTY. He can be found on 14080khz around 0100-0300, and then from 1200-1800z. QSL N6FF.

The VK2SG RTTY DX Notes can also be found on the Internet at reflector digital-dx at st.rim.or.jp and the OH2BUA Webcluster at URL http://www.clinet.fi/(tilde)jukka/rtty.html.

For next week's bulletin send your bandpass to Jules, W2JGR at W5KSI.(HASH)NOLA.LA.USA.NA, e-mail: w2jgr AT millcomm.com.

REMEMBER, DX DON'T SLEEP. GL DE BOB WB2CJL at W5KSI.(HASH)NOLA.LA.USA.NA or e-mail: wb2cjl at juno.com.

==========

Excerpts from the ARLD037 DX news.

TUNISIA, 3V. Mashiko is QRV from the 3V8BB club station. His length of stay is unknown. QSL via JF2EZA.

VIETNAM, 3W. Hiro, JA2EZD, is QRV again as 3W6KA. QSL via XW2A.

LESOTHO, 7P. Bob 7P8BO is QRV using CW and SSB. He can generally be found on 30 meters at 1945z, and on 80 meters at 2100z. His length of stay is unknown. QSL via W4YBO.

TAIWAN, BV. Special prefix station BU0DX is QRV and can be found on 20 meters. QSL via BV8BC.

AZORES, CU. Maike, DL4XS, and Dieter, DL3KDV, will be QRV from Sep 1-15 as CU2/homecalls. Look for activity on 160 and 20 mtr's QSL via home calls.

PHILIPPINES, DU. Hans, PA3GKI, is QRV as 4F2DX from Luzon Island using CW on 40 and 20 meters. It's reported he will visit another rare DU-land in the coming weeks. QSL to home call.

THAILAND, HS. Francois, TK5AE, is QRV til Sep 22 as either HS0/ TK5AE or HS0AC. He is using CW and SSB, and can be found on 80 through 15 meters. QSL via home call.

KURE ISLAND, KH7. The Midway/Kure DX Foundation DXpedition should be QRV with the call AH0W/KH7K. The team will be traveling with wildlife scientists who are conducting a research project here. QSL via KE7LZ.

BRAZIL, PY. PP5LL will be QRV 80 to 10 meters, using CW and SSB, as PR5L from Sao Francisco Island, IOTA SA-027, from Sep 1-15. QSL to home call.

ALBANIA, ZA. Mike, K5KWG, is active as ZA1MH. He will be QRV on 160 to 2 meters using CW, SSB and RTTY. He is operating from a remote village where he is working as a missionary setting up radio communications. QSL via Z32KV.

==========

Excerpts from the Ohio/Penn Dx PacketCluster DX Bulletin N0. 320.

3W, CON DAO ISLAND (Vietnam). The 'DX News Sheet' reports Yuki, JI6KVR, will activate a new Vietnamese IOTA, Oct 14-20th. This island is in the Con Son Group (b). The callsign was not given. QSL via JJ6LXX (JA) and EA5KB (others).

HV, VATICAN. With the efforts of IK0FVC and I0JBL look for HV4NAC to be active during the 1997 CQWW RTTY Contest (Sep 27-28). Other operators will include W6OTC, K6AW and W6OSP. Before the contest, look for activity on CW and SSB as time permits.

TY, BENIN. Sigi, DJ4IJ, is now active until Sep 19 as TY1IJ. Activity has been on 40 30 and 20 mtrs CW and SSB. QSL via DK8ZD.

VQ9, CHAGOS ISLANDS. Look for Pres, N6SS, to be active once again from here as VQ9SS. Activity will last until Nov. Look for him to be active on 160 meters. QSL via CBA.

Hello,
I've read a bit of the thread and have a comment. The grade of liscense
a person holds doesn't reflect the quality or capabilities of the
operator. Yes, An Extra has learned to be proficient with morse code. If
he doesnt use it, what good is it. Code is rapidly loosing it's required
status in communications around the world. But some people like it. It is
a skill to be mastered. But knowing it doesn't make you a better
operator, hence the 80 meter comments previously stated.
Most current no-coders don't know what older Hams had to go thru to get
licensed. I've heard many of the stories. With the understanding of
electronics and the ways they had to learn decades ago, no coders of
today have it much easier to get a license. It's that aspect that I
suspect the older hams have against newer no-coders. But a lot of no-code
dribble comes from higher license holders that didnt even have those
previous requirements. That part is sad.
Now, based on things I've heard. You dont have to be an extra to get
into the microwave bands (GHz freqs.). Current "TECHNOLOGY" is going that

way. As much as hams don't like technology (but they like the new radios), satellites will enable continental or world wide communications with even a HT in the near future. It will take some work to learn how to build a good satellite capable station. Many HF'ers dont even want to "LEARN" these bands.
Between code, packet, SSTV, RTTY, and other modes, it takes effort to be a amateur operator and do more than talk. Anybody can talk into a mike. The real issue I think is in people that take the time to learn how to do it in a different way. Years ago, you actually had to understand electronics to get a ham license, you didnt have the questions preprinted or computer programs to test with You had to actually understand theory. Those days are gone and the older hams resent that newer ones dont have to endure the same treatment so to speak. In getting into the microwave bands properly, you will have to "LEARN" about how microwave works to do a good job building a station.
I suspect quite a number of HF operators will not take the effort to learn. They have so much $$ in the HF equipment, the mere frugality nature of hams may forbid them from investigating the microwave bands.
The NoCode term is a catagory not an insult. We have some great operators in all bands, and some real loosers. With all the modes, freqs to use, and capbilities open to hams, I have more respect for people that take the effort to learn and use "THE MODES AVAILABLE" to them via their classification than hams that just "talk" into a mike. They are the ones that will keep ham radio available to us.

You are correct Bill. I guess my earlier posted retraction, apology,
and cut & pasted excerpts from the FCC's website on Type Acceptance
and Certification never made it into r.r.a.m. or anywhere else for
that matter. Don't know why. It mentions that Certification was
formerly Type Acceptance.

I guess this adds fuel to someone else's comment that I am not keeping
up with the times. C'est la vi. Hey! And I don't even speak French.

It originated, as does much of the "ham" terminology from the days in which telegraphy was the only mode. I would imagine it was a shortened form of the words "Seek You"....as in looking for someone to talk to.

So far, I have found the Sat Trak IV, Trak Box from TAPR, and the Kansas City Tracker. Are there any other choices? All of these are either VERY expensive, or simply not available!

Any software mostly solution using parallel or serial ports going to a set of relays to control a rotor? It seems to me, if you used a parallel port and had a relay for each direction, there would still be enough lines left to read back positioning info via some kinda voltage converter. Maybe it is not even needed. I have no idea what voltages the signals are even at.

Any body got some plans that use a mainly software solution that can be made with a few parts in a project box?

I've got a 386 with a couple meg of memory that I could dedicate to this function if I oculd build the hardware easily. If more power is needed, I could come up with it, but not necessarly dedicated to that one task though.

Also, How about something less than the $300-$1,300 for an azmuth/elevation rotar. Could I use two normal rotars, and put one sideways? The 2m and 440 antenneas are not that heavy.

Finally, how about some homebrew plans for 20 element CP beams.

Thanks for any ideas you may have.

Another interesting point is that we are not call "CQ" on voice. I
believe it is to be "Hello, all stations" or something like that.

I use CQ for CW and "seek you" for voice, so I'm legal.

SB PROP ARL ARLP038
ARLP038 Propagation de K7VVV

Solar activity was off a bit this week after the fantastic rise during the recent period. The 90 day average of solar flux rose another two points this week to 79, and the flux on every day was above this running average. As of September 17 the daily flux has been above the running average continuously for 44 days.

Geomagnetic activity was mostly stable this week, with the best day on September 17. Currently as this is written on early September 19 geomagnetic conditions have been unstable and even stormy, but this should stabilize over the next few days.

Look for solar flux to dip as low as the eighties over the next few days, and then bounce back above 90 after September 25, above 100 after month's end, above 110 after October 6 and below 100 again after October 12.

We move into Fall next week. Look for better seasonal conditions, and with the higher solar activity the upper HF bands should have better propagation.

Sunspot Numbers for September 11 through 17 were 98, 97, 85, 74, 61, 62 and 52 with a mean of 75.6. 10.7 cm flux was 108.6, 109, 107.6, 102.5, 98, 95.4 and 93.1, with a mean of 102, and estimated planetary A indices were 9, 15, 10, 12, 16, 9, and 8, with a mean of 11.3.

This sounds like the voice of experience!!

I have only been a ham since 1967 but I have the impression that the
proper way to call for anyone who will answer is by calling CQ whether on
phone or CW.
The answers to most of these questions can be found in the ARRL
Operator's Manual which I think should be required reading for all hams.

radio biathlon set for NNJ; K6PGX honored;
FCC personnel changes; Down under
low-frequency DX firsts

FCC ISSUES GATE 3 CALL SIGNS!

Get ready to remember another batch of new call signs. Six weeks to the day after the opening of Gate 3, the FCC began processing vanity call sign applications. FCC personnel in Gettysburg, Pennsylvania, had spent much of the intervening time clearing out a backlog of vanity applications filed prior to the Gate 3 opening and matching up payments with electronic applications. On Wednesday, September 17, the FCC issued some 500 to 600 vanity call signs to those who had filed applications on August 6, the opening day.

Applicants can check for new call signs at http://www.arrl.org/fcc/fccld.html or by using one of the other popular call sign databases.

Judging from the call signs turning up on the FCC database, some Advanced class hams took advantage of Gate 3 to obtain Group C call signs where the suffix comprised either a first name (we spotted a Joe, a Don, a Ken, a Bob and a Gay, for example) or a set of initials. Perhaps apropos of his QTH,

Gene Uliasz of Gun Barrel City, Texas, used Gate 3 to turn KC4WA into K5TNT. Formerly KF6CG, Georgia A. Lawrence of Manhattan Beach, California, obtained K6GAL. Other applicants obtained new Group B call signs, sometimes trading one 2x2 in for another. For example, Karl Mortensen of Wakefield, Rhode Island, swapped KE1FK for KA1RL. Still others went for the snappy suffix. Charles Pharis of Kagel Cyn, California, turned in KK6NE for KA6USA. Michael Amaral of Walpole, Massachusetts, gave up W1IDP to obtain WA1AW. Along the same lines, Michael Esposito of Germantown, Tennessee, swapped WA2VXV for WA2AW. Yvonne Lane of Kingwood, Texas, gave up KF5MY for W5XYL.

A few, like West Gulf Director Jim Haynie, just shortened the prefix. Haynie went from WB5JBP to W5JBP. Others went for one appropriate for their QTH. Teriann Miner of Palmer, Alaska, turned in her lower-48 call sign, KG0OY, for KL7AT.

The Iowa DX and Contest Club got WI0WA.

In all, it appears that the FCC received more than 1000 vanity call sign applications on August 6. Because earlier gates remain open, it's impossible to get an accurate count of applications filed solely under Gate 3, however. The FCC still has not indicated when it plans to open Gate 4, which will make the vanity call sign program available to General, Tech Plus, Technician and Novice licensees.

IT'S ANDY THOMAS FOR WENDY LAWRENCE ABOARD MIR

Astronaut Andy Thomas is studying for his ham ticket in anticipation of spending several months aboard the Russian Mir space station starting in January. He'll replace Wendy Lawrence, KC5KII, in the Mir rotation. Lawrence originally was supposed to replace Mike Foale, KB5UAC, aboard Mir later this month, but in the wake of the problems aboard the space station over the past few months, however, NASA determined it would prefer to have an astronaut aboard Mir who could fit the Russian space suits--in case an astronaut needed to participate in a space walk as Foale has had to do during his Mir stay. Lawrence is too small to wear the Russian space gear, and that same thinking could have been behind swapping Thomas for Lawrence on the subsequent Mir posting.

Lawrence will, however, be aboard the September 25 shuttle flight, STS-86, that will deliver US astronaut David Wolf, KC5VPF, to Mir. NASA decided this week that Mir was safe enough to keep an astronaut aboard. This month's rendezvous and docking will also deliver supplies and return Foale to Earth from his four-month stay aboard Mir. In addition to Wolf and Lawrence, the Atlantis crew will include Commander Jim Wetherbee; Pilot Mike Bloomfield; and Mission Specialists Scott Parazynski, KC5RSY; Jean-Loup Chretien; and Vladimir Titov, KD5AOS. Parazynski and Titov will conduct a spacewalk to retrieve some science experiments from the outside of the station. STS-86 will mark the 20th Atlantis' 20th space mission and the 87th shuttle flight in the program's history.

Wolf, 41, is both an electrical engineer and a medical doctor. A native of Indianapolis, Wolf is single. He holds 11 US patents and has published more

than 40 technical papers. Wolf became an astronaut in 1990. He served as a mission specialist astronaut aboard space shuttle Columbia (STS-58) in late 1993. Wolf has completed training to replace Foale for a four-month stay on Mir and continue the permanent US presence on the station that began with Shannon Lucid in 1996.

Thomas, a native of Australia, is 45 and single. He holds a PhD in mechanical engineering, and he became an astronaut in 1993. Thomas flew his first flight in space on Endeavour in May, 1996.--NASA

MIR CREW FIXES COMPUTER--AGAIN

The Mir computer crashed again earlier this week, but the crew cobbled together enough spare parts to put it back into service within a day. Sunday's computer failure was the fourth in three months. The computer went down only last week, sending the Russian space station spinning in orbit.

The malfunction was the latest in a series since Mir was damaged in a collision June 25 with an unmanned Progress supply rocket. It forced the crew to turn off lights in most of the Mir's modules. The crew had to fire thrusters to re-aim the spacecraft in the right direction to get sunlight on its solar panels.

A replacement computer and system parts reportedly are aboard Mir, and a completely new computer is to be sent up on a Progress supply rocket next month. The Russians have asked NASA to ferry another new computer to Mir aboard the shuttle later this month as well.

To top the computer failure, the three-man Mir crew, including US astronaut Mike Foale, KB5UAC, took refuge late Monday in the Soyuz transporter as a US military satellite passed by too close for comfort. Reports on just how close the satellite was vary from 470 yards to three-fourths of a mile, depending on the source.

The problems followed in the wake of a damning report from NASA Inspector General Roberta Gross that outlined a host of unsafe conditions and situations that US astronauts have faced aboard Mir. Those concerns were aired during a House Science Committee hearing on Mir safety issues this week. NASA has maintained, however, that Mir remains safe and still plans to post astronaut David Wolf, KC5VPF, to Mir later this month for a four-month stay.

Meanwhile, the new, experimental 70-cm ham radio frequency for Mir, 437.650 MHz, is said to be working well. MIREX will continue the frequency swap test until September 28, then return to 2 meters. BJ Arts, WT0N, reports having an enjoyable chat with Foale on September 8. Foale told Arts that when he gets back to Earth, he wants to take a vacation "somewhere warm."

Foale said he enjoys seeing the .jpg photo files some hams have posted but suggested keeping the size of any .jpg files to 10 kB or less.

Foale returns to Earth next week aboard the space shuttle Atlantis.

IARU ADMINISTRATIVE COUNCIL CONSIDERS FUTURE OF HAM RADIO

The IARU Administrative Council has set up an Amateur Radio Outlook Committee to make general recommendations on the future growth and development of Amateur Radio. Tom Atkins, VE3CDM, was named to head the panel, established in response to changing technology and the Internet. The action came as the Administrative Council met in Beijing September 13-15, following the IARU Region 3 Conference there. The council also approved setting up an ad hoc committee to review the IARU's structure to ensure its long-term viability. The committee--to be designated by President Richard Baldwin, W1RU--will provide a preliminary report at the Council's next meeting in Caracas, Venezuela, in October 1998.

The Council also agreed on the instructions to be given to the IARU delegation to this year's World Radio Communication Conference (WRC-97). The International Secretariat will update this material as new information becomes available. The core delegation to WRC-97 consists of Larry Price, W4RA; Michael Owen, VK3KI; and Wojciech Nietyksza, SP5FM. The month-long conference opens October 27 in Geneva. The Council also reviewed the status of the action plan developed by the 7 MHz Strategy Committee. After WRC-97, information will go out to member societies to update the plan in the light of decisions taken at the conference.

The Council also considered the second published report of the Future of the Amateur Service Committee (FASC). Comments resulting from a comprehensive review of the FASC report to the Region 3 IARU Conference will be incorporated into a further report. That report then will be circulated as the next step in the process of developing an IARU position on a possible revision of Article S25 of the international radio regulations. The Council will develop its own position after it receives the FASC's final report next September.

The Council selected "Amateur Radio--Communicating Worldwide for Three Quarters of a Century" as the theme for next year's World Amateur Radio Day, September 20. The theme recognizes the 75th anniversary of the first transoceanic two-way amateur communication, between France and the US, in November 1923. Starting in 2000, World Amateur Radio Day will occur in April, on the anniversary of the founding of the IARU in Paris in 1925.

Among other actions, the Council:

* updated the IARU Strategic Plan for the Development of Support for Amateur Radio. The goal of the associated 1998-99 action plan is to apply resources to enhance support for Amateur Radio in Africa. The plan's implementation will be coordinated with IARU Region 1.

* adopted a resolution encouraging the promotion and development of Amateur Radio digital technology.

* reviewed, updated and approved the present and anticipated future requirements for radio spectrum allocations to the Amateur and Amateur-Satellite Services.

* reviewed planning for IARU participation in the next World TELECOM in Geneva in 1999. The council received a Region 1 report on preparation for Amateur Radio participation in Africa TELECOM 98 in South Africa.

* appointed an ad hoc Monitoring System Review Committee to review the terms of reference of the IARU Monitoring System and make recommendations they deem appropriate. Pedro Seidemann, YV5BPG, was appointed to head the committee.--David Sumner, K1ZZ

MASSACHUSETTS PRB-1 INVOKED TO AX LOCAL TOWER LAW

A Massachusetts ham recently made good use of the PRB-1 federal pre-emption that was incorporated into that state's laws a couple of years ago to get a very restrictive local zoning bylaw overturned. Recently, the Massachusetts Attorney General's office disapproved the bylaw--known as Article 43--that had passed at the annual town meeting in Easton, Massachusetts. The bylaw applied limitations on the siting of towers, antennas and satellite dishes that would have restricted them from being built closer than 500 feet from existing buildings and prohibited them entirely from residential lots. The bylaw also would have prohibited antennas or dishes located on a structure from exceeding the structure's height by 10 feet.

Armed with a copy of the Massachusetts tower bill provided by ARRL New England Vice Director Don Haney, KA1T, Joseph Goveia, W1LQB, of North Easton wrote the state's attorney general and enclosed a copy of the state's PRB-1 statute. Under Massachusetts law, the attorney general's office must approve all zoning bylaw amendments.

In response, the attorney general told the Town of Easton that the restrictions in Article 43 "as applied to Amateur Radio antennas, violate state law." The AG declared, "No zoning ordinance or bylaw shall prohibit the construction or use of an antenna structure by a federally licensed Amateur Radio operator." The AG noted that zoning bylaws in Massachusetts "may reasonably regulate the location and height of such antenna structures for the purposes of health, safety, or aesthetics" but the bylaws would still have to "effectively accommodate Amateur Radio communications."

The AG also noted that "it is not at all clear that home satellite dishes for television reception would be permitted under this article."

ARRL New England Director Tom Frenaye, K1KI, observed that the Bay State's tower law "gives Massachusetts Amateur Radio operators a very viable tool to use in ensuring that Amateur Radio communications are effectively accommodated by zoning bylaws."--Tom Frenaye, K1KI

MIR VETERAN, JOHN BLAHA, KC5TZQ, TO RETIRE FROM NASA

Shuttle astronaut and Russian space station Mir veteran, John Blaha, KC5TZQ, will retire from NASA later this month. Blaha will become the assistant vice president, Integration Engineering, for USAA Corp in San Antonio, Texas. While aboard Mir late last year, Blaha made ham radio history when he carried out the first scheduled school QSO between unlicensed students and a NASA astronaut-ham living aboard Mir. Not long before that historic QSO, the FCC had approved third-party contacts with Blaha from the Russian space station.

Selected as an astronaut in 1980, Blaha has extensive flight experience. He flew on six separate shuttle missions during his career. He was the pilot

aboard Discovery for the STS-29 mission in March 1989 and flew again on Discovery as pilot for STS-33 in November 1989. Blaha commanded two shuttle missions, STS-43 in August 1991 aboard Atlantis and STS-58 on Columbia in November 1993.

Following extensive training at the Gagarin Cosmonaut Training Center outside Moscow, Blaha was named as an extended-duration crew member to fly on the Mir space station. He joined the Mir crew in September 1996 and returned to Earth in January 1997.--NASA

TWO VERSIONS OF FCC FORM 159 CONFUSE FILERS

With no fanfare, the FCC issued a new Form 159, Remittance Advice, in July that's somewhat different from the earlier version of the form issued in February. As of September 15, 1997, the FCC requires vanity call sign applicants to file a Form 159 with their applications no matter the method of payment. The FCC still was shipping the old Form 159 as of mid-summer, despite the revision.

While the two forms require essentially the same information, some item numbers on the new form--available via the FCC Web formpage site--are different from those we reported last week (see The ARRL Letter, Vol 16, No 36). For example, applicants enter the Payment Type Code (which is "WAVR") in Item 20A on the new version and Items 14A and 14B on the old version of Form 159. Under Item 21A on the new form, applicants filing only one application may write "1" or simply ignore the box.

The Fee Due, entered in Box 22A, rose to $50 for the ten-year license term as of September 15, 1997. Hams can ignore Items 23A and 24A. Under Item 25, Payer TIN, and Item 26, Applicant TIN, applicants should supply the appropriate Social Security number(s). The new Form 159 contains a Section F for Credit Card Payment Information. Applicants must print their name and sign Form 159.

LOCAL AUTHORITIES CAN'T PROSECUTE ADMITTED JAMMERS

Authorities in Elkhart, Indiana, report they know who planted repeater jamming devices in the area--including a couple inside beach balls (see The ARRL Letter, Vol 16, No 36), but they can't do anything about it--even though the two people responsible have admitted it to police. That's because the local authorities have no jurisdiction in the case, which involves federal law. The local sheriff's department declined to identify the suspects other than to say that neither are licensed amateurs and that one of them is female. Mike McCauley, KB9GNU, the Public Information Officer for Elkhart County Department of Emergency Management, told Amateur Radio Newsline that not all of the devices were hidden in beach balls. McCauley says that a number of the jamming units were literally sold into the homes of the general public. One was even equipped with a seismic detector that would turn the unit off when a direction-finding team came within about 30 feet of it. Another one was put inside a brand-new TV set that had been returned to a department store then resold. Word is that the pair involved simply do not like ham radio and appear to have a personal vendetta against

hams.

Local authorities have reportedly asked the FCC to investigate.--Newsline via KB9GNU and N9PGE

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, in Seattle, Washington, reports: Solar activity was off a bit this week after the fantastic rise during the recent period. The 90-day average of solar flux rose another two points this week to 79, and the flux on every day was above this running average. As of September 17 the daily flux has been above the running average continuously for 44 days.

Geomagnetic activity was mostly stable this week, with the best day on September 17. Currently as this is written on early September 19 geomagnetic conditions have been unstable and even stormy, but this should stabilize over the next few days.

Look for solar flux to dip as low as the 80s over the next few days, and then bounce back above 90 after September 25, above 100 after month's end, above 110 after October 6 and below 100 again after October 12.

As we move into fall next week, look for better seasonal conditions. With the higher solar activity the upper HF bands should have better propagation.

Sunspot numbers for September 11 through 17 were 98, 97, 85, 74, 61, 62 and 52 with a mean of 75.6. The 10.7-cm flux was 108.6, 109, 107.6, 102.5, 98, 95.4 and 93.1, with a mean of 102, and estimated planetary A indices were 9, 15, 10, 12, 16, 9, and 8, with a mean of 11.3.

IN BRIEF:
* This weekend on the radio: The YLRL Howdy Days event continues until 0200 UTC on September 20; The ARRL 10 GHz and Up Cumulative Contest, the No 1 QRP Afield, the Air Force 50th Anniversary QSO Party, the Washington State Salmon Run, and the Scandinavian Activity CW Contest are on tap. See September QST, page 105, for details.

* Section managers re-elected: Several ARRL section managers unopposed for new terms have been declared re-elected. They include Robert Griffen, K6YR, of San Luis Obispo, California--Santa Barbara Section; O. D. Keaton, WA4GLS, Old Hickory, Tennessee--Tennessee Section; Joe Knight, W5PDY, Albuquerque, New Mexico--New Mexico Section; Richard Mondro, WA4FQT, Dearborn Heights, Michigan--Michigan Section; Randall Carlson, WB0JJX, Wilmington, Delaware--Delaware Section; William Voedisch Jr, W1UD, Leominster, Massachusetts--Western Massachusetts Section; and Bob Vallio, W6RGG, Castro Valley, California--East Bay Section. Their new terms begin January 1, 1998.--Rick Palm, K1CE

* Special event to mark Sputnik launch anniversary: Special event station M1ASE (Amateur Satellite Experimenters) will mark the 40th anniversary of the launching of Sputnik 1 on October 4, 1957, by the Soviet Union. The 184-pound, basketball-sized sphere ushered in the era of the space race. At

the height of the Cold War and several months into the International Geophysical Year, the Soviet Union had beaten the United States into space, a symbolically significant achievement. Within a year, the US government created the National Aeronautics and Space Administration. M1ASE will be on air for 24 hours on October 4, 1997. Then, activity will continue into November, ending at 2359 UTC on November 3, the date of the 40th anniversary of the launch of Sputnik 2. M1ASE will be active in voice mode on all available analog satellites, concentrating on RS-10, RS-12, RS-15, RS-16. An SWL award, special QSL cards and an award certificate are available for those working M1ASE on more than one satellite.--AMSAT News Service/John Heath, G7HIA; NASA

* Ham radio biathlon set for NNJ: Here's a new twist on club fund raising that should appeal to the athletically inclined who enjoy ham radio contesting and the great outdoors. The Vernon (New Jersey) Township RACES/ARES holds a ham radio biathlon Sunday, September 27, to raise money to pay its repeater insurance premium. Here's how it works. The objective is to get to a prearranged destination under your own power, set up a station, and make as many QSOs as possible. Then, at 12:30 PM, all stations will break down and head back to the start/finish line for a timed finish. The event will be held at the Hidden Valley Ski Area in Vernon, which sports over 4000 feet of ski trails and up to a 600-foot rise. The operating point will be the top of the mountain, and all modes and bands from 1.8 through 440 MHz may be used. The groups are charging a $5 entry fee. Contestants get bonus points for contacts on CW, HF, and the use of photovoltaic power.--Deborah McKay, N2TTP/The Hudson Loop

* K6PGX honored: Norman L. Chalfin, K6PGX has been honored by the Radio Club of America for his numerous professional accomplishments. Chalfin will receive the Edgar F. Johnson Pioneer Citation at the annual Radio Club of America Awards Banquet November 21 in New York City. For many years, Chalfin, now in his 80s served as a patent attorney for the Jet Propulsion Laboratory, where he was also active with the JPL Amateur Radio Club. Among other accomplishments, he also served as a volunteer historian to AMSAT for more than two decades and provided much of the ham-satellite materials used in ham radio films produced by Dave Bell, W6AQ, and Amateur Radio promotional videos by the team of Roy Neal, K6DUE, Bill Pasternak, WA6ITF, and Frosty Oden, N6ENV. Chalfin is founder of the Newsline Support Fund and was fund administrator for more than a decade.--Amateur Radio Newsline

* FCC personnel changes: Regina M. Keeney became the new chief of the FCC's International Bureau on September 15. The former Wireless Telecommunications Bureau head replaces Peter Cowhey, who announced his resignation last month. Keeney had, at one point, been considered for appointment to the FCC. Since 1995, she has served as chief of the FCC's Common Carrier Bureau. In other changes, the FCC announced that Richard D. Lee has been named acting chief of the FCC's Compliance and Information Bureau. Since 1995, he's served as the FCC's deputy managing director. Mary Beth Richards, currently deputy chief of the Common Carrier Bureau, has been appointed to succeed Lee as deputy managing director.--FCC

* Down under low-frequency DX firsts: The first two-way VLF CW contacts between Australia and New Zealand have been logged. ZL3FJ used 100 W on 176 kHz and a 122-meter (approximately 400 feet) mast to work AX2TAR (operated by VK7ZAL) in Australia late last month. Reports were Q5 on both ends of the circuit. An attempt at an SSB contact was less successful. VK7RO and VK7ZAL both had solid copy on ZL3FJ, who was unable to read AX2TAR due to QRM from local power line carriers. The mast used by ZL3FJ had recently completed service for an MF AM broadcast station.--Thanks to Bob, ZL2CA, and the Wireless Institute of Australia

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of

the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Hello all,

I am looking for an _affordable_ 2M all-mode (SSB-CW-FM). I used to
have an Icom IC290H that I would like to find again. Please, no dual
band satellite radios, I can't afford one, yet!

Please email me at: k3tz@nauticom.net

Also, would you consider a trade for a mint condition Icom IC281H?

Thanks for reading & 73,
Tim
K3TZ

Your answer is VERY misleading here!
Micro-broadcasting is done LEGALLY in many cases.

There is provision for folks to transmit at 100mW into a five foot
antenna legally - and in the broadcast bands. RAMSEY ELECTRONICS and
SEVERAL other manufacturers sell a variety of transmitters for this
purpose. Everyone knows Radio Shack and other toy companies sell
"wireless microphones" and "wireless intercoms" etc. etc. that all use
100 mW or so on the medium wave, as well as 49 MHz, VHF-FM broadcast
bands etc. etc. and they are NOT illegal to use!!

You can broadcast JUST LIKE a regular FM station if you want, and ON
the FM band with a 100 mW stereo quality station. You can spend
anything from $30-3000 on such a station.

For more details and FACTS (instead of opinions) see:

http://www.mnsinc.com/bry/piralynx.htm

> Wonder why you left this off, Brian?

Found that list a bit overwhelming due to heavy volume PLUS they
charge $12 or $15 a year ... for WHAT?

All other lists are free, so I encourage folks to try them first!
However, I should include the JACKATTACK boatanchors group with a
caveat I suppose.

I have links to their ARCHIVES on my links section. I find THAT more
useful.

If I want to reply to the whole group I can get the list and do that
too!

Thanks for your helpful comment though, and I will add that list.

4494. Least RF Noisy PC Components

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-19 00:00:00 UTC
From: 1RealHope <davidc@bit-net.com>
Message-ID: <01bcc54e$23e59260$2d8a92d0@bit-net.bit-net.com>
Source record: 190077
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Can anyone recommend any specific models and brands of monitors (15-17 inch SVGA flat screen styles),
cabinets, keyboards, mice, printers, etc. that broadcast minimal amounts of RF noise?

I have my desktop on a UPS unit, so I doubt it is injecting noise back into the AC lines, but my current Vivitron 15 (mfg. for Gateway 2000), and midi-tower (with M-Tech Motherboard & AMD K6 133) sure kick up lots of noise!

Also, what about laptops? Any better (RF-wise) than others?

I have an old wooden cabinet am-sw radio (and another with a plastic cabinet) I'd love to be able to use within less than 6 feet of my PC, and when I get back into the hobby later in the winter, would like to quiet the ambient noise level.

Thanks for any advice!

Hi, Danny.

Please try my Morse code program, International Morse Code Processor,
version 3.13 (IMCPW313.ZIP).

You can download it from either of the following locations:

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw313.zip

http://www.coast.net/SimTel/win3/hamradio.html

IMCPW (International Morse Code Processor for Windows) v3.13 is a
Windows 3.1 & 95 compatible program which translates
program-generated/user-defined text and text files to Morse code. Code
speed is adjustable from 3-50 wpm with a character speed of 10-50 wpm
for Farnsworth code. Keyboard Copy window included for copying code from
the keyboad. "Barred" characters implemented. User can define any
prosign. Select characters and prosigns in groups or in any combination.
Includes a comprehensive help facility, a main menu, four popup menus,
and eleven code practice lessons. It is Fully customizable from the
Options menu. A Sound card is not required. Requires 964K of free hard
disk.

I'll stick by my first statement (Its a matter of field strength). If you stay legal you'll be lucky to hear your own signal at the end of your house...not Mw but generated strength. I've played this game before and 100 Mw into a 5 foot antenna will be heard for at least 1 block. Play at your own risk...73

Hello Jake,

That is a good question and if my memory is accurate everything i knew about the ham stores in the Philadelphia area came to me via word of mouth before I was licensed. Almost immediatly after i was licensed i began to receive promotional advertising from most of the local players in that market. It is interesting to read the posts on this subject. I have to agree that major players in the radio manufacturing game probably feel that small time operations are not worth their time and overhead. However, the overall US market for bigger ticket equipment purchases seems to be shrinking. This can be cuased be several things.

1.- Declining Economy (not likely at present)
2.- Advancing age of hams who have the operating priviliges to use higher ticket equipment but are thinking of now living on fixed incomes and can not make the expense comittment.
3.- The technician class licensee who has no real interest to upgrade and is happy with a 2 meter handi with no plans or need for anything else.
4.- A general loss of interest in amateur radio by the populace
5.- Dollars which would have gone for big ticket ham items several years ago no going for pentium and power PC computers, internet access and peripherals

These are just the things that come to mind as I write this. As a piece of anecdotal evidence, I personally invested in a 200 mhz Power PC set up rather than the new Icom, Kenwood, Ten Tec, or Yaesu. My old Icom 725, Kenwood TS 520s and Yaesu 2400 still work well and i have no problem making contacts with them. I will probably be about 3 years before I can budget funds for a new radio now.

The interesting thing about my decision was that I went to a local computer store (5 of them in my small town) and got to play with the

equipment before I purchased it. If a ham store had been available to me locally i may have decided that I just had to have the new Kenwood and my old Mac LC could cruise the net for another couple years.

There is only so much money chasing the offering of goods in the marketplace. It takes a lot more effort to buy a piece of ham gear in my town than it does a computer. Different markets I know, but the principle is the same.

4500. Re: Micro-broadcasting?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-19 00:00:00 UTC
From: Lyle Koehler <k0lr@emily.net>
Message-ID: <342350AF.5791@emily.net>
Source record: 190083
Cross-posted to: rec.radio.scanner,rec.radio.amateur.homebrew,rec.radio.shortwave,rec.radio.amateur.misc

Here are some excerpts from the FCC Part 15 rules on low-power communications devices. See the Longwave Home Page at http://members.aol.com/lwcanews/index.html and follow the links to "Part 15 Experimental Operation" for more information. There are no restrictions that prevent using such devices for "micro-broadcasting" in the 510 to 1705 kHz range as long as there is no interference to licensed radio services.

I want to emphasize, however, that 100 milliwatts is *not* legal in the FM band.

15.23 Home-built devices.

(a) Equipment authorization is not required for devices that are not marketed, are not constructed from a kit, and are built in quantities of five or less for personal use.

15.217 Operation in the band 160-190 kHz.

(a) The total input power to the final radio frequency stage (exclusive of filament or heater power) shall not exceed one watt.

(b) The total length of the transmission line, antenna, and ground lead (if used) shall not exceed 15 meters.

(c) All emissions below 160 kHz or above 190 kHz shall be attenuated at least 20 dB below the level of the unmodulated carrier. Determination of compliance with the 20 dB attenuation specification may be based on measurements at the intentional radiator's antenna output terminal unless the intentional radiator uses a permanently attached antenna, in which case compliance shall be demonstrated by measuring the radiated emissions.

15.218 Operation in the band 510-1705 kHz.

(a) The total input power to the final radio frequency stage (exclusive of filament or heater power) shall not exceed 100 milliwatts.

(b) The total length of the transmission line, antenna and ground lead (if used) shall not exceed 3 meters.

(c) All emissions below 510 kHz or above 1705 kHz shall be attenuated at least 20 dB below the level of the unmodulated carrier. Determination of compliance with the 20 dB attenuation specification may be based on measurements at the intentional radiator's antenna output terminal unless the intentional radiator uses a permanently attached antenna, in which case compliance shall be demonstrated by measuring the radiated

emissions.

Hello all,

What is the allotted freq for R/C on 50 mhz?
I am going to put up a packet station on 50.620 this weekend running
APRS and I heard that 50.62 is right where 6m R/C freqs are.

Can anyone help me with this?
Thanks..

4507. VHF DF project article

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-19 00:00:00 UTC
From: frog207lillypads@juno.com
Message-ID: <5vt21ecka1@news.wco.com>
Source record: 190192

Sometime about a year ago, (give or take) I saw an article I think was in 73 Magazine, although it might have been QST, about building a simple DF unit for VHF frequencies. Rather than a complex Doppler unit, this project used a simple phase unit and used 3 (mag mount) antennas on the car roof as opposed to the 4 used in doppler systems,

If anyone can ID the month and year and which magazine this was in I'd appreciate this info.

Thanks,

Ed W7DXZ

IMHO, only the anal retentive care what class of license someone else has. One's conduct on the air should be the determining factor as to what kind of ham they are.

When someone asks me, I tell them I am a ham radio operator. I don't tell them I am an Extra Class ham radio operator, unless they know something about amateur radio and they ask. I mean, who cares what class of license I hold? I might, but I don't care if you don't care. I just have all amateur privileges available to me. My class of license is not a rank and I don't treat it as such. Heck, 20 years in the military was enough of that stuff.

I won't argue what a "real ham" is. I am a VE and have tested many a ham. Each one who passed the required elements that resulted in a license became a real ham. The FCC mailed them proof of that. Regardless of the methods they used to study, memorize, what have you....within that envelope that came from Gettysburg, PA is their proof of real hamship.

Would someone please scan a synthetic ham license sent from the FCC and email it to me?

I am in favor of keeping the cw exam but that is my right to feel this way. Yes, we can argue and you can try to convince me otherwise but I hold my opinions dear....at the same time I usually respect years. It's when you resort to personal attacks that I lose that respect.

To be finished when I have the time....

Dont bother with the cable from cable TV, there are thousands of
frequencys on that line and will more than likely provide you with more
noise and interferance. Get a test clip and connect 50ft or so of wire.
That should improve things. If you want a more elaborate FM antenna,
email me. Put the wire outside if you can for enhanced J. Geils
reception.

DIVISIONAL NEWS

VK2 DIVISIONAL AWARD

The theme for this quarters award is for Literary excellence. That is the writing of articles for Amateur Radio Magazine or your clubs magazine. The value of this quarters award is $40.00 awards are only for WIA members.

Nominations must be received at Amateur Radio House by Monday 6 October.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer

NEW SOUTH WALES NATIONAL PARKS AWARD

The aim of the award is to encourage radio amateurs and short wave listeners to activate or to log amateur radio activity from these park with

the state of New South Wales.

Any band, mode and power level permitted by an individual's licence can be used for this award.

The award commenced at 0001 UTC on 1st January 1988. New parks are included and old parks are excluded from the award from the date at which they are gazetted by Parliament.

The basic certificate will be issued on proof of contact to and/or from 25 parks.

Short wave listeners shall need to log the callsigns of both stations making a two way contact into and out of a park. A minimum number of 25 parks need to be worked in this way to obtain the basic award.

Endorsements will be available for 50, 60, 70, 80 etc. parks. When all have

been worked, and application made, then a "Worked all New South Wales National Parks" endorsement will be issued.

Accurate logs will be required for the award. Logs must show, in chronological order, the following information. UTC date & time; callsign, mode of operation, frequency of operation and park name.

Applicants for the award must submit full log sheets and declaration in accord with the General Rules for all WIA awards, as listed in the current Australian Radio Amateur Callbook. The VK2 AWARDS application form must be completed and submitted with all logs and applications.

The cost of the basic award is
Australia & Territories: Aus$4.00 (4 IRCS)
Overseas Air Mail: Aus$5.00 (5 IRCS)

The cost of the endorsements are
Australia & Territories: Aus$2.00 (3 IRCS)
Overseas Air Mail: Aus$2.50 (3 IRCS)

Payment may be by cheque or postal order and shall be in Australian currency only. International Reply Coupons (IRCS) of less than one year old may also used to apply for the award.

For the booklet containing the information on this and the other WIA VK2 awards, please send a stamped self addressed envelope (at least 200mm x 100mm or 8 inches x 4 inches) to:

The Awards Manager
Wireless Institute of Australia
New South Wales Division
P.O. Box 1066
PARRAMATTA N.S.W. 2124

--Peter O'Connell VK2EMU Divisional Awards Manager

On Internet, you will find details of all VK2 awards; simply go to the VK2 Divisional home page at: http://marconi.mpce.mq.edu.au/wia/ ...just click on "Awards" in the Navigation section.

WICEN NEWS

Along with the Bike Ride today, there is (or was) the debrief for personnel

involved in the Shahzada medical evacuation; we will bring you news as soon as possible.

The only other event this month of which we are aware is the Annual General Meeting of the Volunteer Rescue Association (of whom we are a member squad), to be held in Randwick next weekend. Naturally, WICEN will be well represented, with the President, Secretary, and Deputy State Co-ordinator 1 in attendance.

Next month looks like being quite busy. The Oberon Car Rally, run by Neil VK2XNF, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over the weekend of 18th-19th October; and

the annual Bungonia Cave Rescue, run by Mark VK2XGK, will be on the weekend following, 25th-26th October.

The latter exercise, Bungonia, is planned to be a full-scale DVR (Disaster Victim Registration) exercise, with co-operation from the NSW Police and the other paid (and unpaid) services, and is excellent practice for operating in remote places (although you will be fed).

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX CLUSTER IN SYDNEY

A DX CLUSTER IS NOW OPERATING IN SYDNEY ON 144.825 MHZ.

THE CALLSIGN IS VK2AAB-3.

A DX CLUSTER IS A SYSTEM THAT SENDS TO USERS REPORTS OF DX STATIONS THAT ARE REPORTED BY OTHER USERS THAT HAVE HEARD OR WORKED THE DX STATION. THE CLUSTER CAN BE USED AS THEY ARE USED OVERSEAS TO REPORT OPENNINGS ON SIX METRES AND OTHER VHF BANDS.

OTHER FACILITIES ARE AVAILABLE SUCH AS DATABASES WHICH SUPPLY QSL ADDRESSES OF DX STATIONS. CURRENTLY THERE ARE TWO DATABASES ON LINE.

THE FIRST IS THE PREFIX DATABASE WHICH PROVIDES INFORMATION ON WHICH COUNTRY HAS THE ENQUIRY PREFIX, ITS LOCATION AND TIME DIFFERENCES.

THE SECOND DATABASE IS THE QSL DATABASE WHICH HOLDS IN EXCESS OF 35,000 DX STATION QSL ADDRESSES. AFTER YOU CONNECT SEND INFO AND YOU WILL RECEIVE SOME INSTRUCTIONS ON USING THE DATABASE.

PLEASE SEND ANY ENQUIRY REGARDING THE DX CLUSTER TO
VK2AAB @ VK2WI

--Barry White VK2AAB

SPECIAL EVENT STATION VK2WAH

The special event has been organized by the THE WAHROONGA
AMATEUR HISTORICAL RADIO ASSOCIATION in conjunction with THE
DRAGON AMATEUR RADIO CLUB of CARNARVON in WALES, U.K.
The SPECIAL EVENT STATION, VK2WAH is operating for 24 hrs on the
22nd.SEPT. Celebrating the Anniversary of the First Direct Wireless
Transmission from Great Britain to Australia, WALES TO
WAHROONGA, on the 22nd SEPTEMBER 1918.

Frequencies to be used, when propagation permits :

HF Voice: 3.570, 7.070, 14.270, 21.170, 28.570
VHF & UHF Voice: Repeaters when and where possible.
CW: 14.035 and various
Packet: 144.975, 145.050 and 7.350.

Connect to VK2WAH direct or via VK2DAA and VK2GMU. tcp/ip
connections can be made by telnet 44.136.10.7.

You can also connect from the VK2MJ BBS with Netrom, telnet, ax25 or
use the alias VK2WAH

QSL Cards available for one contact only from:

PO BOX 600
WAHROONGA, NSW.
AUSTRALIA. 2076.

Include self addressed stamped envelope (S.A.S.E.) if an Australian
station or enough IRCs for return postage if an overseas station.

Alternatively QSL cards may be sent via the Bureau.

--Mike VK2MJ

MAGAZINE ROUNDUP

Here again is another summary of the local magazines, which in the
author's opinion could be of interest to Amateurs. This week we discuss
the September issues of the various magazines.

"Electronics Australia" discusses whether smoke detectors are
dangerous; whether your "PC" can handle the year 2000 is dissected;
accelerometer ICs are analysed; the "Remote Power Up" discussed
recently gets some software; and the operation of super-regenerative
receivers is revealed.

"Silicon Chip" completes a 500 watt AM modulator; a simple video
security system is built; and two stepper motors can be driven from a
parallel port.

"Amateur Radio" builds a matching receiver for the simple QRP CW transmitter; a 20m vertical is made to operate on 30m as well; the history of time and frequency standards is discussed; and a simple random wire tuner is built. Listeners with Web access can access the contents of "AR" from the "unofficial" Federal page; the full path is: "http://marconi.mpce.mq.edu.au/wia/federal/armag.html"; we don't know about other magazines. [David thompson VK2NH's "VK2 Notes" column from AR is now on-line on the VK2 Divisional home page]

"Radio and Communications" compares frequency registers; sharing of the Amateur bands with other services is discussed; the stupid things that Amateurs do to their equipment is revealed; antennas are made parrot-proof; the lack of operators on 432MHz is lamented; and a simple antenna tuner for a receiver is constructed, as is a SSB detector and CW filter.

A copy of "ARAAA News", the newsletter from some alternative association, has fallen into your scribe's hands, and he cannot help but review it. The WIA submission is discussed, and we chuckled over the remark about the WIA allegedly being "coy" in discussing it; various leaflets and bulletins are reprinted; a battery monitor, based on other designs, is given (we wonder who wrote it, as the article is anonymous); and another anonymous article describes the Amateur Packet Reporting System APRS; all told, we wonder whether there is a single original article in the entire issue.

Finally, for those interested in renewable and alternative energy, the October-December issue of "ReNew" (formerly "Soft Technology") visits SEDA (the Sustainable Energy Development Authority); checks out the "Green Power" program being operated by eight electricty providers (six of them in NSW), which allows consumers to take some, or all, of their electricity from renewable sources (Greenie-in-residence VK2SKY has gone for 100%); looks at a controversial new wind turbine design from New Zealand; examines pipe corrosion problems in micro-hyro systems; finds out how to overcome neighbourhood objections to wind turbine installations; fingers phantoms that quietly bloat your electricity bill; repairs a Suntron solar panel tracker; and reviews all the latest gear for the technically astute greenie.

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2ZTB

HAM RADIO WILL BENEFIT FROM NEW ACE SPACECRAFT

Data gathered by the Advanced Composition Explorer (ACE) spacecraft - launched this week from Kennedy Space Center - will be of importance to everyone from Amateur Radio operators to solar and space physicists during the next 2 to 5 years as we approach the solar maximum in 2000.

This spacecraft will serve as the first real-time space weather satellite that will provide forecast centers around the world with valuable real-time information regarding the near-Earth and interplanetary space

environments. The latest word is that the spacecraft is functioning perfectly.

The spacecraft is on its way toward an orbital location approximately one million miles toward the Sun, between the Sun and the Earth (at what is known as the L1 point - the first liberation point, or the first Lagrangian
point). This is a point between the Sun and the Earth where the various forces which act upon spacecraft (gravity, for example) precisely balance out, enabling the spacecraft to orbit the Sun at the same rate as the Earth, but one million miles ahead of the Earth. ACE will require approximately 113 days to reach its final orbital position and complete its checkout. Data should be flowing from all instruments by then.

The ACE spacecraft is equipped with an array of instruments that will measure such important quantities as the velocity of the solar wind, the composition of the solar wind, the composition of extrasolar and extragalactic matter, and much more. It also has equipment which will allow it to transmit continuously to the Earth. NOAA has set up three primary reception centers that will maintain contact with this datastream 24 hours a day, 365 days a year, for as long as the spacecraft remains operational. This data will then be processed and made available on the Internet for anyone to receive. Real-time ACE data will be available to the

public and scientific communities through the SWARM (Solar Warning and Realtime Monitor) software at

http://solar.uleth.ca/solar/www/swarm.html.

Data are expected to begin flowing from the ACE spacecraft through the near-real-time data system (and through SWARM) by about February 1998.

This availability of data will provide researchers and amateurs with the unprecedented ability to observe (up to 60 minutes before the Earth is impacted) the arrival of major interplanetary disturbances ejected from the Sun. Such disturbances can severely disrupt radio communications, spacecraft operations, and even such things as electrical hydro power generation and distribution.

Having advance word on such disturbances could be highly useful. Hams and professional radio communicators will be able to complete communications or adjust frequencies and transmitter powers prior to the arrival of such disturbances. Power plant operators will be prepared to shift loads in the event of induced electrical currents from strong geomagnetic storms that form as a result powerful solar disturbances impacting with the Earth. Satellite operators will be able to monitor their

spacecraft more closely and take appropriate actions to prevent surface charging or other hazardous events from damaging spacecraft.

Observers of these natural phenomena also will benefit. People will be able to drive to favorable dark-sky sites to observe the explosive release

of energy in Earth's upper atmosphere that is responsible for forming the northern and southern lights, also known as the aurora borealis and the aurora australis, respectively.

--The ARRL Letter Vol. 16, No. 34, dated 29 August, 1997

JOTA OPERATORS WANTED

From PETER VK2INK

On the 1996 JOTA weekend 4 amateur operators set up a station for the Laylor Park Girl Guides

This was their first JOTA event and was such a success we agreed to run the station again this year.

The leaders were very helpful and they had many other activities to keep the guides and scouts interested throughout the event.

They have lodged the necessary applications and been issued with a call sign.

They have already organised for other local clubs to attend
We now find two of the operators have moved out of Sydney and the other two have work commitments and cannot attend.

If any one, or any club, could take over this station we would be grateful. For further information please call PETER VK2INK any time on 02 9673 3465 or 0411 731 326

Can also be found most evenings on 439.575 and 147.075

--Peter Beecham VK2INK

JOTA 97

John Gibling, VK2EKG, is looking for assistance in running a JOTA station on the 18th and 19th of October this year at GUNNAMATTA PARK, CRONULLA.

He is planning to operate between 2pm Saturday and 10 Sunday, EST. Tents and equipment are already being provided and he only needs assistance with operating.

If anyone can assist for one to two hour or more, either Licensed or Unlicensed, could they please contact John on:-

Phone 02 9524 9457 or drop him a line to 36 BEAUFORD AVENUE CARINGBAH NSW.

--John Gibling VK2EKG

NEW RECORDS SET DURING MICROWAVE DX EXPEDITION - JULY/AUGUST 1997.

On a recent DX Expedition over a 2 week period from July 26 through to August 7th, a group of amateurs from VK3 & VK5 travelled firstly to VK8

then VK4, 2 & finally VK1 and "set" or "extended" 19 Microwave Distance records.

The participants were Alan - VK3XPD from Melbourne, Russell - VK3ZQB from Port Fairy, Trevor - VK5NC and Colin - VK5DK both from Mt Gambier.

VK8 - 7 NEW records were set on 430 Mhz, 1.3 Ghz, 2.4, 3.4, 5.7, 10 & 24 Ghz.

VK4 - 2 NEW records on 3.4 & 24 Ghz. The 5.7 & 10 Ghz records were extended

VK2 - 4 existing records were extended, 3.4 , 5.7, 10, & 24 Ghz.

VK1 - 3 NEW records were set for 2.4, 3.4, & 24 Ghz. The 5.7 Ghz was extended.

Had the weather been more favourable, several other "existing" records could have been extended.

A detailed account of the expedition will be available shortly. It will form
the basis for a future article in AR and for distribution to WIA Broadcast groups and other interested groups/clubs.

--Alan Devlin VK3XPD

CLUB NEWS

ORANA REGION AMATEUR RADIO CLUB
BI-MONTHLY CLUB MEETING SEPTEMBER 26

The Orana Region Amateur Radio Club Meeting will be held at 8pm in the Scout Hall Talbragar St Dubbo. Thursday 26 September.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Orana Region ARC Club Member

(Actually, the 26th is a Friday...)

HORNSBY & DISTRICT ARC INC.

The next formal meeting will take place at 8.00 pm on Tuesday 23rd September in the Mount colah Community Centre, Pierre Closem Mount Colah (near the eastern entrance to the railway station). The guest speaker for this month is Mr Colin Christianson from the ACA. The topic of his talk will be Interference. We hope members will leave the meeting knowing more about Interference and where we stand in relation to interference. Remember, ALL ARE WELCOME, so come along and find out what it's all about.

The club conducts a net every Monday night using the Club callsign VK2MA through the Club rpeater VK2RNS. Frequency 147 decimal 250 with a positive offset. All are welcome.

If you would like to know more about the Club or its activities, write to HADARC,Post Office Box 362 Hornsby 2077 or phone John VK2WRT on 9807 2490 that's 9807 2490.

--submitted by John Turner VK2WRT, Publicity Officer

FISHERS GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

Also every Third tuesday of the Month from 7:30 pm, at the Campbelltown High School is the General Meeting night with lectures on popular subjects. Visitors are always welcome.

Last Tuesday's lecture on Fox Hunting was presented by Adrian VK2BFN from the Blue Mountains Amateur Radio Club. Adrian's lecture and demonstration was a great success, with members wandering around, headphones clamped on their ears, trying to find the hidden transmitter. The Club would like to thank Adrian for making the trip down the mountain to give the lecture.

Jamboree-of -the-Air is on the weekend of the 18th and 19th of October, operators and helpers are required to make this weekend a success. Could members who are able to help on these days contact John VK2TJE or Les VK2TJ.

Don't forget the October meeting is a "Home Brew" competition. So bring along your favourite project and be in the running to win a prize.

--Chris VK2ZCJ, Publicity Officer.

GOLD COAST AMATEUR RADIO CLUB HAMFEST 1997
NOVEMBER 8TH 1997

It's that time of the year again when the organisation for the ANNUAL GOLD COAST HAMFEST commences.

The venue for the 20th HAMFEST is again at the ALBERT WATERWAYS COMMUNITY CENTRE on the corner of HOOKER BOULEVARD and SUNSHINE BOULEVARD.

Doors will be open to the public at 9am on Saturday 8th November 1997. Exhibits can be-set up from 7.30am.

The organisation committee wish to take this opportunity to invite you to participate in this annual event by displaying and offering for sale your goods and equipment or just promoting your club and hobby interest.

The charge for exhibitors is $15.00 per table to cover the cost of space and the tables and chairs required. Two free entry passes will be given to each exhibitor.

If you wish to reserve a table or two, please complete the attached Exhibitors Application Form and return it with your remittance to the

above PO Box by the 8th October 1997. For any queries please contact:
Rosemarie or Jim on 07 552 -1886 after 7pm.

--Rosemarie Scholz, VICE PRESIDEN

BROADCAST ROSTER
Next Sunday, 28th September, 1997

Morning:
Announcer: Tim VK2ZTM
Engineer: Allan VK2EFM

Evening:
Announcer: Peter VK2EMU
Engineer: John VK2FRJ

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity.

Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

I can think of more folks to contact too. Are the Amateur Radio Ops
speaking out due to their involvement (or forced lack of it)?
Certainly some letters to Popular Communications, Monitoring Times,
73' magazine, and (although I haven't seen much desire for ARRL to
battle when there is not a specific infringement of Ham rights) QST
Magazine.

IMO, the sherriff has the "legal authority", or at least some
influence, to kick LARK out of sherriff facilities, but it certainly
shouldn't sit well with the citizens, the board of supervisors, State
OES, Calif Dept of Forestry, and other "emergency and disaster" agencies,
that the AlCo sherriff is threatening the reliability of all of their
disaster preparedness communications plans for political reasons.

[Should Amateur communications be available in another
situation such as the Collier Canyon Ride, it might be best
to arrange for hams not associated with LARK, or any organization
which the sherriff can blackmail. Tentatively, and taking into
consideration other obligations I may have, I (N6QYA) would consider
being available for such a service in such a situation.]

I'm keeping Oakland ARES aware of this, and we'd certainly consider
doing communications for this. We supported the Heart Association
walk in Oakland yesterday, with five hams on bikes and two not.

The telescoping antenna is for FM. There are a couple of ways to couple
to this. The simplest way is to loosely wrap a few turns of insulated wire
around the rod and solder the ends of the wire to the inner and outer
conductors of the cable. A more sophisticated method is to use a L network
between the cable and the rod/chassis. The easy method will probably
suffice, however.

To: All Ten Meter Users
From: CBC Chapter Head, Phil Harich - N3UNF
Subject: CBC at the CARA Hamfest - Oct. 5

The Chesapeake Bay Chapter (CBC) of Ten-Ten International, Inc. has reserved a table at the Columbia Amateur Radio Association (CARA) hamfest to be held on Sunday, October 5 from 8:00 am until 3:00 pm at the Howard County Fairgrounds near West Friendship, Maryland.

We will be distributing information about CBC *and* plan to have a ten meter station set up and operating on the CBC net frequency, 28.435 MHz.

Anyone who contacts the CBC station during the hamfest will be instantly qualified to become a member of CBC. In addition, since October 5 will be Chesapeake Bay Appreciation Day, a contact with any CBC member will be worth a one time credit of 100 points for that day.

See rules posted at URL:

http://members.aol.com/Cchapter/bonuspro.htm

for details.

The Howard County Fairgrounds is located just off of Maryland I-70 at exit 80. Take exit 80 to MD Rte 32 South for 1/2 mile to the first traffic signal. Then, turn right on to MD Rte 144 West. Follow MD Rte 144 for one mile to the fairgrounds on the right. There will be ample signs directing you to the fairgrounds.

Talk-in will be on 146.52 simplex, 147.135/735 repeater, 222.32/92 repeater and, naturally, on 28.435 MHz USB.

Join us in person, if you can, or work us on ten meters.

73,
Phil N3UNF
CBC Chapter Head #FM-01

Along with the arrow, there should be a minus sign, which means the arrow is pointing to the minus (negative) terminal. Occasionally I've seen a plus sign with the arrow, same meaning for the positive terminal.

> Thanks

It's your lucky day, I noticed your QTH was Mountain View, I STRONGLY suggest you get over to Pleasanton on the 1st Saturday of the month. The NorCal QRP club meets there, no meeting BS or boring speeches just a bunch of kit building QRP'ers and they'll have lots of neat stuff to look at and talk about. Check this web site for the directions. It took me about 45min from San Jose when I went.

http://www.fix.net/jparker/norcal.html

Tim, ka8ddz
PS Ramsey does sell a 20m SSB transceiver, about 20 watts I think. Can not comment on quality.

4532. Anybody got a beam that works around 6Mhz? tracking noise source

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC
From: Ron Hardin <rhh@research.att.com>
Message-ID: <3423AD13.5E75@research.att.com>
Source record: 190096

At least around Ontario, Michigan, Chicago, Ohio, a broadband noise
source from about 5900-6000 kHz comes on sometime between about
20:50-21:30 EDST (sometimes later) for about 5 minutes to a half hour;
it builds slowly and obscures Radio Taiwan 5950 Radio Japan 5960
BBC 5975 eventually, and then cuts off very abruptly.

I suspect an ionosonde, since it comes on around sunset in the
ionosphere (well after sunset on the ground)

Can anybody give some bearings for it (and your location too)?

Just tune to say CBC/Radio Japan, or the BBC, for entertainment
and wait for it to come on.

Can someone explain the difference between these various Saber options/features:

5D Core
6D Core
8D Core
System Saber
Saber Si

Does anyone know which Saber III's will cover 433-470 MHz (i.e. will a 438-470 MHz radio work down at 433)?

Which (if any) Sabers have a hot keypad feature? I've used a Saber III (unknown core version) and it was a pain to have to go into a separate menu to send DTMF digits.

Please reply via email - posting this via DejaNews as my ISP's news server is hosed. Thanks.

Source record: 190098

To see the future of Amateur radio one should look to the progression of personal computing. Its success was in direct proportion to the dumbing down of its technical aspects. "Appliance" computers have geometrically increased vs the "techno-nerds" demise.

The future of amateur radio will be found in its "dumbing down" or it will perish. The FCC has left us drifting in the wind. I believe they will, or have, essentially ignored us. The advent of CDMA will allow the use of "our" frequencies whenever the FCC or industry decides they need our limited band width.

Our survival as a viable group of hobbiests rests in opening our doors and getting off our high horses. Hopefully, it is a generational biasis and not inheritable. My kids do not think radio is "cool" but chatting on the computer is. I wonder why. Maybe because one welcomes them with free software and easy gui frontends and the other group of ancient mariners will not evolve.

Enough of my ramblings, but please lets all wake up. "Use it or lose it" has never been more pertinent. 73s KF4SXT

>needed. I have no idea what voltages the signals are even at.

Use a game port to read the potentiometers in the rotators.

>Any body got some plans that use a mainly software solution that can be made
>with a few parts in a project box?

I don't have any plans, but it is easy enough to figure out. You can drive small reed relays directly from a parallel port, or you can use solid state relays. The latter is better, solid state relays expect TTL drive. Hook the rotator pot leads directly to the joystick inputs of the game port, X and Y, for azimuth and elevation respectively. Now all you need is a calibration routine for the game port which is easy to write, and a simple parallel port driver. Make this a TSR which conforms to the KC Tracker API and any of the tracking programs which talk to the KC Tracker will be happy. (Or just include your drivers in any tracking program for which you have source.)

>Also, How about something less than the $300-$1,300 for an azmuth/elevation
>rotar. Could I use two normal rotars, and put one sideways? The 2m and 440
>antenneas are not that heavy.

Many amateur rotators will work for azimuth. Elevation is a bit trickier. The bearings in most rotators aren't designed for side thrust loads. The Alliance UT-100 will work for a light array which is *perfectly* balanced. The Radio Shack rotator can be made to work too. But if your array is at all large, like a pair of KLM yagis, then cough up the bucks for the Yaesu/Kenpro KR-500. You'll be glad you did.

>Finally, how about some homebrew plans for 20 element CP beams.

Just take the NBS yagi plans in the Antenna Book and duplicate the elements, mounting one set a quarterwave ahead of the other set on the boom and rotated 90 degrees. Feed with a pair of 90 degree electrical length pieces of 75 ohm cable joined with a coax Tee. The other leg of the Tee is for your 50 ohm coax back to the rig. To get switchable polarization sense, add a relay to swap the inner and outer of one of the coaxes to one

of the driven elements.

Insulated element mounting works a bit better than plumber's delight for best circularity. Dress your feedline to the rear of the beam and swing it to the tower from there rather than dressing it forward through the elements and down the mast. This will also improve your pattern circularity. It also helps to mount the antennas like X instead of like + on the crossboom. (I mount the preamp on the very rear of the boom, behind the reflector, rather than down on the mast. Note this will affect balance, so choose your boom to mast clamp position accordingly.)

4536. Free Dual Channel Audio Spectrum Analyzer

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC
From: Richard Horne <rshorne@mnsinc.com>
Message-ID: <3423CABC.65CD@mnsinc.com>
Source record: 190100

Spectrogram v4.1.2 is a freeware dual channel audio spectrum analyzer for Windows 95 which can provide either a scrolling time-frequency display or a spectrum analyzer scope display in real time for any sound source connected to your sound card. Spectrogram also allows unlimited recording and playback of the sounds from the audio spectrum display, and can provide very high resolution spectrum analysis of wave files with a wide choice of frequency bands and frequency resolution and either linear or logarithmic frequency scales. Spectrum data logging capability is also provided. Spectrogram is ideal for any purpose related to sound spectrum analysis including

Analysis and identification of biological sounds
Analysis and identification of human speech
Analysis of musical performances
Tuning of musical instruments
Evaluation and calibration of home audio systems
Ham Radio audio reception and tuning

Spectrogram 4.1.2 includes many features comparable to those of commercial programs costing hundreds of dollars. If you need to be convinced, compare Spectrogram 4.1.2 to commercial audio programs described at the following locations.

N8XYN,
I don't understand what you're saying here, but Bry _is_ correct.
The old RS 12-in-1 kit had a 1 tube xmitr. The instructions for that
experiment included the CFR47 regs on the circuit (Probably required by law).

Ya' know...a 1/2 wave dipole for 100MHz(Commerial FM) is under 5' in length.
Ask a QRP guy the best way to feed 100mW to a dipole, but I'll bet the
range is in _kilometers_, not rooms or blocks. I've done 5 miles on 2m@500mW.

That may work fine and dandy, unless Tim lives in a deep valley.
Usually you can make the cable hook-up (or an external antenna hook-up
for that matter) work by splicing the center conductor of the coax (a
clip lead works well) to the antenna and connecting the shield to one
of the screws on the back of the box that connects to the chassis of
the radio. It's actually kind of close to 75 ohms usually! Good
luck.

CQD was the pre-SOS.

CQ was translated as ``seek you'' by Hashifisti Scratchi's column in
CQ magazine in the '50s, which may account for a ``seek you''
legend. The premise of the column would almost preclude there being
any historical accuracy behind it.

I think CQ just has a pleasant rhythm.

There was a distress version of CQ used by Marconi Company shipboard
and coastal operators which was CQD and which was used before SOS.
CQD was sent in letters, unlike SOS which is a single procedural
signal. But none of this helps advance the archeology of CQ except to
confirm that it was already in use in the very earliest days of spark
radio.

>
>Thanks for any advice!

Your UPS may be contributing to the noise. It is a switcher, and they can
do nasty things to the AC line. As far as the other components, they all
make noise. Often two machines from the same maker have vastly different
noise signatures. So it isn't safe to buy by brand name or model number.
Almost all of them can be quieted, though. It just takes a bit of work.

Monitors are usually the worst offenders. That's because practically none
of them are shielded, and because they use large current spikes in their
deflection circuits, and because they use high frequencies in their video
bandpass. You can't kill those currents or roll off those frequencies without
destroying the resolution of the monitor (or even without screwing up its
sweeps). You have to *shield* the monitor to quiet it. Those spikes and
frequencies are *needed* inside the monitor, your task is to *keep* them
inside the monitor. Standard VHF shielding practices will contain the
noise, and standard common mode suppression techniques will keep it
from getting out on external cables. Copper foil tapes or screen wire will
handle the shielding chores, and ferrite beads over the cables (also shielded)
will deal with the common mode escape routes.

The computer is typically the second worst offender. Again, it has high
frequency pulses running around inside. It *needs* those pulses, they
are your program and data. Your task is to keep them inside. Again it
is shielding which does the trick. Good VHF shielding practice is required.

All openings must be screened, and every seam must have full metal to metal contact along its length, with a screw every 5 cm along the seam. Again, all cables exiting the computer must be shielded and equipped with common mode suppressing ferrites.

Keyboards and mice can be particularly annoying. They are difficult to completely shield. Of course you can use ferrites on their cords, but you can't fully shield the keys or the mouse roller area. The best thing to do here is usually to try several different keyboards and mice until you find one that's quieter. There's enough unit to unit variation that this often works satisfactorily. I have found that the Focus 2001 keyboards are generally pretty quiet, and have a good touch too. I have a bunch of those keyboards in use here. However, *one* of them was noisy as all get out and I had to discard it.

The one thing which likely *won't* do any good is to "ground" the computer. That often makes matters worse. All this does is create a ground loop path for the noise currents, and an antenna (the ground lead) to radiate them. There is nothing mystical about "ground" which sucks away noise. Pay attention to shielding and suppression instead.

A note about laptops. Some of them are pretty quiet, some aren't. They generally use lower voltages and slower clocks than desktop units, so the noise isn't as pronounced. And they are tightly integrated so there aren't any long interconnecting cables which can radiate. Beware of plasma displays, however. They can be real noise generators. And even some LCD displays can be noisy. Most laptops are in plastic cases to reduce weight, so their shielding is minimal or nonexistent. And the wall warts they use for AC supply are usually switchers, and can be *very* noisy. Because of their size, laptops are often hard to shield and suppress. So if you have a noisy one, there often is little you can do about it.

I know that Europe has FM CB already. But this is becoming to much like Amateur Radio. The only way I would support this is to allow hams to have access using their callsigns and having higher power. I is sort of like the GMRS folks having access to FRS (they can use higher power).

4549. TK-340 Programming / Modification Info needed!

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC
From: John Reed <jreed@avana.net>
Message-ID: <3424274C.6BD1@avana.net>
Source record: 190113

I recently purchased a Kenwood TK-340 at a hamfest. (Got a
'great' deal on it...)

Anyway, this is a UHF Commercial Band Handie Talkie - it was
the commercial counterpart to the Kenwood TH-25AT and the TH45AT...
that type of radio.

Anyway, I am needed programming information for this radio. I am
told that there is a chip resister I can remove to bring it into
the hambands.

Either way, I need the programming information none-the-less.

If you have this info, please give me a private email at the
address in the .sig!

Thank you!

John

Source record: 190116

Ok here's the deal,
i did the mars/cap mod to probblem.
I then decided to proform this computer
interface mod.
I saved a template file with the
orginal stuff. then while coping the
template (not the *.rdf file) i pulled
the cord out at about 50 %.
i can't load the orinal template file
unless i unclick the 'load template file'
box, and after loading it, the ht stays the
same. if i load the file with the box
checked i get 'cerr.'
i tried many things mainly loading old,
new, and both *.rdf files (now this was
after i loaded the 50% template file)

i turn on the ht, reset it, etc
all i get is mainly a blank screen

i can get a 'ALRST prS F' msg if i
reset the ht.

Now the whole ht is messed up ;(
leaving me very sad ;(
I think i'll just sit here and cry :(

4553. HELP! VHF Mitrek to repeater mods.

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC

Message-ID: <601d6q$s4a$1@news01.deltanet.com>
Source record: 190117

Hello! Dino here. I need to convert the 40 watt motorola mitrek
for repeater use. I need the repeater for race communications about twice a
year. I plan on using one for transmit and one for receive. Any mods would
be appreciated. Also, if you live in Southern CA, and can perform the mods,
I will PAY!

Thanks for your time and efforts! 73!

Hi all,

I recently purchased a second-hand RF signal generator (Trio SG-402), alas without documentation etc.

Does anyone have manuals, circuit diagrams, or any info on this little beastie? I'm happy of course to pay copying/postage costs etc.

Thanks for any info.

4555. FT890 CAT program - free!

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC
From: "Brian E. Cauchi" <briane@geocities.com>
Message-ID: <601e8i$7e4@news.keyworld.net>
Source record: 190119
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

CatScan provides computer control for the Yaesu FT890 (and similar) transceivers. It complements the facilities found on the radio, and adapts the radio better to a radio facsimile monitoring environment.

*** It provides a simple way to use a Station database, and to browse the bands selectively.

*** It has Advanced scanning facilities, to help you find the best signal on the bands.

*** It has Short-cuts to otherwise awkward functions, such as Direct frequency key-in, Write memories to radio and Side-band/filter toggle.

*** It has a Command line interface so that scripts can be used to control the radio from within other programs.

It is free, and available for downloading at:
http://www.geocities.com/SiliconValley/2504/catscan.htm

73's from Brian.

Need following parts for Heath HW101:

-heterodyne osc. boards (all)
-plastic freq. readout dial (this one is cracked)
-plastic insulator for plate tuning cap. (goes between tuning rod and
cap.)
will consider junker radio with all above parts working, willing to pay
$30 for junker.
-
Also looking for parts for Kenwood TS-820s:
-need PLL boards (both) in working order

Need parts cheap, please email with parts list and prices.
This is not for me, but for a friend, so questions may take an extra bit
of time to get answered!
Thanks,
Randy, KC8CPK

4559. Where to find a spanner wrench

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC
From: Karl and Terri Nielsen <nielsen@flash.net>
Message-ID: <34249299.7F66@flash.net>
Source record: 190123

I'm working on my wife's Yaesu FT-51R and I need an adjustable spanner wrench to remove the antenna connector and the tuning knob. I've tried all of the stores that I could think of here in Tucson, but no-one seems to have one. I know that they are available somewhere (my dad has one, but it's 600 miles away...).

Does anyone know where I might be able to find one (mail order or whatever).

Thanks!

- Karl Nielsen - KC7LVV - nielsen@flash.net -

4560. Is amateur radio dying? 12 WAYS YOU CAN HELP STOP IT!

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-20 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <60244eph1@w3eax.umd.edu>
Source record: 190124

1) Get on the air. Make noise. An unused band is a lost band.

2) Learn about those things you don't know about. In my case, it's the digital stuff and satellites.

3) You're here to communicate. When someone asks, "is that a CB radio?", explain to them what it REALLY is, what you can do with it, and why one would use it.

4) Upgrade, if possible.

5) Go mobile. Make yourself visible. I've gotten a LOT of weird looks when people see the 13' high Scrwedriver I've got on the car, but when I ask, "would you like to know what that monster antenna is for?", they usually say "yes, but I was afraid to ask."

6) Try some outdoor events; we just did QRP Afield, a QRP Field Day, today. Put up a 20' continuously loaded whip on a 32' mast int he middle of a field, and had no fewer than a dozen people, including a bunch of 12-14 year-olds, come by and take a look.

"So how much would you think it would cost for a license?"

"$500?"

"Try FREE."

"You're kidding, right?"

People just don't know ANYTHING about ham radio. TEACH them!

7) Make it a point to NOT BE SHY around the public. People these days don't have a clue what radio is; be a ham radio emissary. Be the FIRST exposure they get to radio, so they can develop some POSITIVE ideas before someone else gets to them.

8) Make a contact via QRP, or even QRO, 20m SSB in front of a crowd of kids. They DO think it's cool (trust me)! Hand 'em the mic and see if they're unimpressed.

9) Explain how repeaters works and who can "own" or construct one. Do an on-air demo.

10) If possible, make a contact at 35 wpm CW. "How can you tell what they're saying?" "Practice." Not everyone wants something for nothing...it's pretty neat.

11) Do public service events. Wear your badge proudly.

12) Talk POSITIVELY to newcomers. Your attitude goes a
long way toward forming their impressions of the service.

Source record: 190125

I am interested in the origins of the term "MIL" in reference to the typewriter being used to copy code. When I was in the Navy, shortly after WW II, the term was well established. I have heard from reasonably reliable sources that it had been well established amoung telegraph operators long prior to WW II.

If anyone has any references, I would appreciate it.

This is SERIOUSLY WRONG. The relevant paragraphs, last I looked,
were 47 CFR 15.219 and 47 CFR 15.239. The Code of Federal regulations
is at http://www.access.gpo.gov/nara/cfr/index.html if you want to check.

First a minor quibble, AM broadcast band allows 100 milliwatts input
power with a 3 meter (10 foot) antenna/ground system.

FM broadcast band is severely restricted to a field strength of of
250 microvolts per meter at a distance of 3 meters. You plug this
into various antenna equations and you get a radidiated power of
around 30 NANOWATTS with an omni directional antenna. Enough to
get you about 100 feet.

Make sure each coil is really at resonance. It may appear to peak, but
that can simply be where you are passing through the point of maximum
inductance and you are getting close to but not achieving resonane.

Each coil should actually be able to peak in two places. If you only
get one peak, you need more C.

4568. 19 New Microwave Distance Records set in VK !

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-21 00:00:00 UTC
From: Alan Devlin <adevlin@golden.net.au>
Message-ID: <34254BCF.5018@golden.net.au>
Source record: 190128
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

Gidday all,
below is a summary of a much larger document which describes a recent Amateur Radio Expedition in Australia, during which 19 NEW Microwave Distance Records were either Set or Extended in the Northern Territory (VK8), Queensland (VK4), New South Wales (VK2) and the Australian Capital Territory - VK1.

If anyone wishes to read the complete article (which I will say is a good "read") I can email it to you. It's in WORD6 format with few Pix & graphs & anecdotes.

The whole aim of this expedition was to inspire others into becoming involved in the wonderful world of microwaves. See you there !!!

Thank you.

Alan Devlin - VK3XPD,
Melbourne, Australia.

SUMMARY - VK1,2,4 & 8 MICROWAVE DX EXPEDITION - JULY/AUGUST 1997.

On a recent DX Expedition over a 2 week period from July 26 through to August 7th, a group of amateurs from VK3 & VK5 travelled firstly to VK8 then VK4, VK2 & finally VK1 and "set" or "extended" 19 Microwave Distance records.

The participants were Alan - VK3XPD from Melbourne, Russell - VK3ZQB from Port Fairy, Trevor - VK5NC and Colin - VK5DK both from Mt Gambier & David VK5KK from Adelaide.

Our achievements over this intensive 2 week period can be summarised as follows :

VK8 - 7 NEW records were set on 430 Mhz, 1.3 Ghz, 2.4, 3.4, 5.7, 10 & 24 Ghz.

VK4 - 2 NEW records on 3.4 & 24 Ghz and the 5.7 & 10 Ghz records were extended.

VK2 - 4 existing records were extended - 3.4 , 5.7, 10, & 24 Ghz.

VK1 - 3 NEW records were set for 2.4, 3.4, & 24 Ghz, and 5.7 Ghz was extended.

Had the weather been more favourable, several other "existing" 2.4 Ghz records would have been extended too !

A detailed account of the expedition is now available. It will form the basis for a number of articles in AMATEUR RADIO magazine and for distribution to WIA Broadcast groups and other interested groups/clubs.

Alan Devlin - VK3XPD for & on behalf of -

Trevor Niven - VK5NC,
Colin Hutchesson - VK5DK,
David Minchin - VK5KK and

Russell Lemke - VK3ZQB.

Howdy Joe:

QSL on the "nice" a-holes. They are fun to make fun of on the air. I basically started an entire publication on the crap they threw our way, shutting off the repeaters and jamming us.

I've met some of the GREATEST friends on the ham bands--specifically 2 meters. THey're all pretty goofy like me. However, I'm glad I didn't meet my wife on 2 meters (hi hi ho he).

I find it worth the $12/year for the BoatAnchors subscription because this
group has almost zero spam and has zero off-topic political pollution.
The signal-to-noise ratio is very high, and if you are interested in
tube-based communications or test equipment, I recommend you ask for
the free trial period. WPE9CGQ

4571. HF mobile antenna help

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-21 00:00:00 UTC
From: rbritt@visi.net
Message-ID: <34243ad9.4740607@news.visi.net>
Source record: 190131

I have just installed am Atlas 210 in my car. I have a ham stick antenna I just bought installed on the trunk with a trunk lip mount. I can hear everything great in the novice and lower end of the 80 meter band. The signals around 3947 are extreemely weak. I can put out 100 watts into a dummy load but the vswr is great on the antenna. Is the lack of an uncut antenna causing the weak problem at the high end? Any suggestions? I have never been HF mobile and am a newly upgraded General. Thanks.

PLease reply to rbritt@visi.net

>, just stating facts.

Just calling them facts doesn't make them so. Where does your data
come from other than you just making them up? If you are going to
claim "just stating facts" put some real numbers in there and back
them up.

Try http://www.qrz.com , then click shareware and then choose "morse code programs" , there's a fair number to choose from there :-)

Greg Dean <n9nwo@gte.net> wrote:

"I is sort of like the GMRS folks having access to FRS (they can use higher power)."

They don't. GMRS can only use seven of the fourteen FRS channels -- the ones already allocated to simplex GMRS use before FRS was made legal -- and GMRS radios don't interoperate well with FRS radios because of the different deviation.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 977 21st September 1997

COLS COLUMN

LOOKING AT THE INCREASING NUMBER OF ENTRIES IN THE VK2SG DX
NOTES THE LAST TWO OR THREE WEEKS, I WONDER WHETHER WE HAVE
INDEED TURNED THE CORNER OF THE SOLAR CYCLE. I REALISE THAT
THE INCREASE IN NUMBERS COULD BE THE RESULT OF CONTESTS, BUT I
DON'T THINK THERE WERE ANY RTTY CONTESTS DURING THE LAST THREE
WEEKS. FURTHER MORE, THE WEEK-DAY ENTRIES HAVE ALSO INCREASED.
I HEARD SEVERAL RTTY DX ON 20 METRES DURING THE WEEK, BETWEEN
3 AND 4 PM EST.

MOST OF THE DX ENTRIES ARE RTTY, THOUGH THERE IS NO INDICATION
FROM THIS WEEK'S COMPILER OF THE NOTES REGARDING WHAT MODE WAS
USED. LOOKING AT THE FREQUENCY OF EACH ENTRY GIVES A PRETTY
GOOD IDEA. MOST OF THOSE ABOVE AND INCLUDING 14080 TO 14095
ARE PROBABLY RTTY AND THE OTHERS AMTOR OR PACTOR. IN REGARD TO
THE ABOVE, I LOOK FORWARD TO SEEING THIS WEEKS IPS REPORT AND
WILL CHECK OTHER SOLAR REPORTS ON THE INTERNET DURING THE REST
OF THIS WEEK. WILL KEEP YOU INFORMED.

ONE OTHER THOUGHT READING THROUGH THE ARRL AND OHIO/PENN DX
NOTES IS THAT THERE IS A GREAT INCREASE IN THE NUMBER OF WEB
SITES AND EMAIL ADDRESSES. MOST OF THE NOTES REGARDING THESE

ARE REQUESTING YOU CALL THE WEB PAGE ON THE INTERNET. NOW I USE THE INTERNET TO GATHER NEWS FOR THIS BROADCAST EACH WEEK, BUT I CAN'T HELP THINKING OF WHERE WE ARE GOING?. DARE I SAY WHO NEEDS AMATEUR RADIO ANY MORE. YOUNG PEOPLE TODAY DON'T NEED TO STUDY FOR A LICENCE WHEN THEY CAN TALK TO OTHERS RIGHT AROUND THE WORLD ON THE INTERNET. WILL YOUNG PEOPLE WHO WOULD HAVE STUDIED FOR A LICENCE THINK TWICE ABOUT IT IN THE NOT TOO DISTANT FUTURE. I HOPE NOT.

BACK TO THE GOOD NEWS. I HAVE RECEIVED THE NAMES, CALLSIGNS AND ADDRESSES OF THE PLAQUE WINNERS IN OUR WORLD WIDE RTTY CONTEST AND HAVE GIVEN THEM TO THE PLAQUE MAKERS FOR ENGRAVING. THEY SHOULD BE ON THEIR WAY IN THE NOT TOO DISTANT FUTURE.

IF YOU RESIDE IN THE SYDNEY AREA, YOU CAN FIND A VISUAL REPORT OF THE DX NOTES ON AMATEUR TELEVISON. THE TRANSMISSION IS MADE BY THE GLADESVILLE AMATEUR RADIO CLUB. I HAVE VISITED THE STUDIOS OF THE CLUB AND AM VERY IMPRESSED BY THEIR PROFESSION-ALISM. THE COUNTRIES THAT HAVE CALLSIGNS IN THE DX NOTES ARE DISPLAYED ON A LARGE MAP OF THE WORLD. YOU CAN RECEIVE THE TRANSMISSION ON A NORMAL HOUSEHOLD TELEVISON ON CHANNEL 35, SO IT WOULD BE WELL WORTHWHILE TUNING IN ON ONE OF THEIR TRANSMISSION NIGHTS. GIVE THEM A CALL, IN THE EVENING, ON THE CLUB REPEATER ON 146.925 MHZ FOR DETAILS OF TRANSMISSION TIMES. OTHER PROGRAMS ARE ALSO TRANSMITTED WITH A WIDE VARIETY OF SUBJECTS.

73'S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT 12/18 SEPT.

SUMMARY
Date 12 13 14 15 16 17 18
10cm 109 108 103 98 95 93 88
A 13 9 13 12 7 8 (15 EXPECTED)
T 30 30 42 36 29 33 31

SOLAR ACTIVITY WAS LOW ON 12TH AND 18TH SEPTEMBER; VERY LOW 13TH TO 16TH, AND MODERATE ON 17TH. THERE WERE TWO M1 FLARES REPORTED ON 17TH.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS UNSETTLED TO ACTIVE ON 12TH; QUIET ON 13TH; QUIET TO UNSETTLED 14TH TO 17TH, AND QUIET TO ACTIVE ON 18TH.

MAXIMUM USABLE FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES. SPREAD F WAS REPORTED DURING LOCAL NIGHT ON 16TH SEPTEMBER.

FORECAST (19 SEPTEMBER - 25 SEPTEMBER)

SOLAR: VERY LOW TO LOW. A CHANCE FOR ISOLATED LOW LEVEL
FLARING EXISTS FROM TWO SOLAR REGIONS.

GEOMAGNETIC: QUIET TO UNSETTLED FOR 19 TO 22 SEPTEMBER, THEN
UNSETTLED TO ACTIVE CONDITIONS POSSIBLE.

FREQUENCIES: MOSTLY NORMAL EARLY IN WEEK, THEN DEGRADED HF
CONDITIONS ARE EXPECTED TOWARDS END OF WEEK IN
ASSOCIATION WITH GEOMAGNETIC ACTIVITY.

COURTESY OF IPS RADIO AND SPACE SERVICES

Notes of Interest:

Willis Island, VK9W, a group of 10 operators expect to be qrv on Sep 11 for 12 days. Callsign will be VK9WY for the YL's and VK9WM for the OM's. Check out their web site at http://www.odxg.com/odxgwillis95.html QSL via VK4FW

North Cook, ZK1, plans are to erect all antenna's on Sat 20 Sep since no outside work is allowed on Sunday.They will start as soon as the equipment is set-up on Sunday 21st. RTTY frequencies are 3580, 7085, 14080, 18110, 21080, 28080. They have a web site at http://aurumtel.com/cook.html

KH7/Kure Isl. A group led by Frank Smith AH0W will operate all modes from Sep 26 to Oct 4, with 4 stations operating continuously.

For next weeks bulletin, send your bandpass and notes of interest to Luciano, I5FLN at I5FLN at iol.it or packet address I5FLN.ITOS.ITA.EU

73 and GOOD DX de Randy WX5L WX5L at I-10.NET, W5KSI.#NOLA.LA.USA.NA

ARLD039 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, QRZ

DX, The Daily DX and Contest Corral from QST. Thanks to all.

ANGOLA, D2. Look for CT4KO to be QRV as D2AI starting Sep 15. He will be active on 80 to 10 meters, including 24 and 18 meters, using SSB and RTTY. Some RS-12 satellite activity is expected. He will try to schedule some activity on 6 meters. QSL via CT1EGH.

THAILAND, HS. Fred, K3ZO, will be QRV using mostly CW as HS0ZAR from a club station from Sep 14 to Oct 6. Look for him on 40 to 10 meters. There will be no newer band activity. QSL to home call.

ITALY, I. Special Event Station IY1EY will be QRV on all bands, using CW, SSB and RTTY from Sep 20 to 28 to celebrate the radioeletric experiments made between 1919 and 1936 by Guglielmo Marconi from his ship the 'Elettra' in the Ligurian Sea. QSL via IK1QBT

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

Email address for the Broadcast Officer is : patl(at)conmusic.usyd.edu.au or patl(at)mail.users.usyd.edu.au

73s de Pat VK2JPA Broadcast Officer.

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text

you can say "ha ha" and of course on voice you would sound like an idiot

if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

I've always heard is refered to as a *mill*. In other words, a machine
for grinding out text. That's pretty descriptive of a typewriter's function.

Hello, I have a project in mind for a M series VHF radio. I need a way to change the channels remotely. I was wondering how the control head communicates with the radio. BCD switching? I need the ability to go from channel 1 to channel 7 then to another channel without stepping through all of the channels. It will be a blind channel change.

Also, has anybody plugged a TNC into there radios? I hook one up for giggles and the PTT and the receive are great. However, my TX audio is really weak. I cranked the TNC up, but that seems a lot of drive. I don't need that much even for a MICOR!

Any help that you could give would be greatly appreciated.

Forwarded Message:

A request for help from these worldwide resources ----

As a result of some recent email and on-the-air exchanges, I am prompted to
undertake the writing of an article the purpose of which is to identify the
unique pleasures, characteristics and joys of cw as a mode of communication.
In short, why cw should be viewed not as hurdle to be overcome, but rather
why its use is a source of personal pleasure to those skilled (or becoming
skilled) in the art.

To that end, I am asking for your opinions. Why do you like cw? What
particular and special pleasures does it afford you? What benefits do you,
as an individual, derive from your skills with this somewhat arcane tool?

All ideas and approaches are welcome.... for example, memorable qso's on cw,
philosophical theories on unique characteristics of the mode, side benefits
that cw skills bring to other areas of your life (or the reverse), why cw
qso's are different from those utilizing other modes (if indeed you think
they are), and so forth.

All forms of response are welcome ---essays, one liners, "war stories",
histories, anecdotes, deep and thoughtful analyses [:>)], etc.

Your assistance is very much appreciated. (Bill is not
know to monitor UseNet so please respond to his e-mai
address:

From title 47 of the Code of Federal Regulations, Part 15, subpart C:

Sec. 15.239 Operation in the band 88-108 MHz.

(a) Emissions from the intentional radiator shall be confined within a band 200 kHz wide centered on the operating frequency. The 200 kHz band shall lie wholly within the frequency range of 88-108 MHz.

(b) The field strength of any emissions within the permitted 200 kHz band shall not exceed 250 microvolts/meter at 3 meters. The emission limit in this paragraph is based on measurement instrumentation employing an average detector. The provisions in Sec. 15.35 for limiting peak emissions apply.

(c) The field strength of any emissions radiated on any frequency outside of the specified 200 kHz band shall not exceed the general radiated emission limits in Sec. 15.209.

(d) A custom built telemetry intentional radiator operating in the frequency band 88-108 MHz and used for experimentation by an educational institute need not be certified provided the device complies with the standards in this part and the educational institution notifies the Engineer in Charge of the local FCC office, in writing, in advance of operation, providing the following information:
(1) The dates and places where the device will be operated;
(2) The purpose for which the device will be used;
(3) A description of the device, including the operating frequency, RF power output, and antenna; and,
(4) A statement that the device complies with the technical provisions of this part.

4593. Help: Amp presents SWR to rig

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-21 00:00:00 UTC
From: Robert Brandon <rbrandon@nospam.austin.ibm.com>
Message-ID: <3425FA67.2E42@nospam.austin.ibm.com>
Source record: 190153

I have a Yaesu FL-2100B amplifier that presents a pretty high SWR to rig.

The guy I bought it from had just replaced the finals - with JoLida tubes made in China. The manual says to adjust the input coils for each band if you change to a different brand of tube. I can't get rid of the SWR with these coils, however. At best (20M), I can get it down to 1.45:1. At worst, (15M) its 2.8:1.

Anybody run into a similar problem? I guess I could replace the tubes, but that's not exactly a cheap solution. I could also change the values of the capacitors on these input circuits. Any recommendations? This isn't normal is it?

Thanks -- e-mail responses appreciated. (Remove the "nospam" in the reply address.)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & WB2RAJ The 59(9) DXReport, WB4UBD, N5KO, AC7DX, W7TSQ, AG8L, KG8CO, AH0W/OH2LVG, 9A6JYL, DL2HEB, DL7UFR, DL7IO, EA1QF, F6AJA, G4BUE & DX News Sheet, G4ZVJ, JA1ELY, JH8RZJ, T77WI, VK9LX, ZP5FGS and ZS6NW for the following DX information.

3B8 & 3B9, MAURITIUS AND RODRIGUEZ ISLAND. Look for Toshi, JA1ELY, to be active from 3B8 Mauritius before he goes to 3B9 Rodriguez. He hopes to be active from 3B9 by September 23th. He will be joined by Roddy, 3B8DL, and the two operators will be active as 3B8DL/3B9. Activity will be on SSB, CW and RTTY with operations on 80-10 meters. Activity will last until the morning of September 28th. QSL via JA1ELY.

3C0, ANNOBON ISLAND (DXpedition update). Angel, EA1QF, 3C0DX Annobon DXpeition 1997 Coordinator, reports his team has decided to suspend the expedition to Annobon (which was to take place during October). The complete press release will be provided to all OPDX InterNet Subscribers as an additional bulletin.

3D2, ROTUMA ISLAND. Well known DXer Ron, ZL1AMO, who is currently active from Fiji as 3D2RW, was heard saying he was once again trying to make plans and arrangements to go to Rotuma.

9A97WPC (SPECIAL EVENT STATION). The station will be active during the 6th World Puzzle Championship (with countries-participants from all over the world) being held in Koprivnica, Croatia, from September 23-28th. Amateur Radio Club of Koprivnica and its members will activate the special event station 9A97WPC on all HF bands, including WARC bands on CW and SSB. A special full color QSL cards will be available to all "Log-in QSOs". QSL to the bureau or direct (Callbook adress) to QSL Manager 9A3KQ.

9G, GHANA. A group of British operators will be active during the 1997 CQWW CW Contest from Accra. They will be active as 9G5VJ as a Multi Op/ Single Transmitter category. They plan to be active on all bands 160-10 meters. The team of operators will be: Steve/G3VMW, Ken/G4RWD and Andy/G4ZVJ. Outside the contest, between November 21st and December 2nd, the operators will sign with their own 9G callsigns, concentrating on CW on the WARC and low bands. Please QSL via home calls: 9G5VJ via G4ZVJ, 9G5SW via G3VMW and 9G5WD via G4RWD. For more information check the following WEB site: http:\\www.bramham.demon.co.uk

9M8, EAST MALAYSIA. JH3GAH, JR3WXA and JA2SWJ will be active from Miri, Sarawak, October 23-26th. They will sign 9M8TG for CW/RTTY and 9M8YY for SSB. The trio hopes to give a new one for low banders and WARC chasers.

C5, THE GAMBIA. Mako, JA1OEM, will be active from here between September 25th and October 9th, as C56/JA1OEM. He will be in the city of Banjul. By the way, Mako is 73 years old and you may remember working him last year from PZ and FY. Activity will be on SSB/CW with operations on 40-10 meters. He does prefer CW but operates at a very slow speed. QSL to his home callsign.

FR, REUNION. Jan, N3NW, will be here for the CQWW RTTY Contest (September 27-28th). His callsign will be FR/N3NW. He plans to enter as a 15 meters single band entry. QSL via N3NW. All contacts will receive a card via the bureau.

FP, MIQUELON. KG8CO, N8CC, K8AEM and W8MC have announced that they will be operating from here October 23-28th. They will be an entry in the 1997 CQ WW Phone Contest running Multi/Multi (callsign or callsigns were not provided, we will keep you updated). QSL via K8AQM.

HC8, GALAPAGOS ISLAND. Operators N5KO, VE3EJ, W6NL, K6BL and HC1OT have announced that they will be active as HC8N during the CQ World Wide SSB Contest as a Multi/Single entry. QSL via AA5BT.

HR, HONDURAS. Sigi, DL7DF, and his crew (Tom/DJ6TF, Tom/DL2RUM, Tom/DL7BO, Frank/DL7UFR and 3 YL's) will start Sigi 10th DXpedtion from October 17-29th. They plan to operate especially on the low bands and on CW, but SSB and RTTY are also possible. They will also be in the CQWW DX SSB Contest. They will be using 3 tranceivers with amplifiers with the following antennas: 3 element beam for 20, 15, 10m, 6 element beam for 20, 15, 10m, 3 element beam for 17 and 12m, GP for 30, 40, 80 and 160m and beverages to Europe and Japan. There was NO CALLSIGN provided, but QSLs will be via DL7DF.

IOTA NEWS.....
Ulli, DL2HEB, will be on the air from Laes Island (EU-088) from the September 27th to October 5th. Activity will be mainly in CW and QRP using the call OZ/DL2HEB/p. Look for him on the following frequencies: 14040, 14060 and 14260 kHz. He will also try to use the digital modes (RTTY, Amtor, Pactor I and II). QSL to his homecall DL2HEB directly, or via the buro.

Giancarlo, T77WI, will operate from IOTA OC-046, Moorea Island, from September 29th to October 10th. Activity will be mainly SSB, with a possibility of some CW. QSL via I0LTX via CBA (for this operation ONLY). Giancarlo is not sure the assigned call-sign (it might be /FO8 or a FO8?? temporary call).

Ryozo, JH3JYS, will stay on Yonaguni Island (AS-024) in Okinawa for two months beginning October 1st. He wants to provide this rare IOTA number to as many IOTA chasers as possible. QSL to JH3JYS direct or bureau. Ryozo Goto: A9-202, 5 Fujishirodai 3 chome, Suita, 565-0873 Japan.

JG8NQJ/JD1 QRT'ED BY MOTHER NATURE. Take, JG8NQJ/JD1, in Minami Torishima (Marcus), has reportedly been hit by typhoon #20, which hit the island, and his shack was swallowed up by mountainous sea waves (10 meters high). For more information, check the following WEB site at: http://www.asahi-net.or.jp/~nb8k-mtd/

KH7K, KURE ISLAND (Update). Frank, AH0W/OH2LVG, member/teammate of the Midway-Kure DX Foundation, sent out a final press release on the upcoming DXpedition stating a special callsign has been issued for use by this DXpedition: K7K (Kilo Seven Kilo). OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

KP2 & WP2, U.S. VIRGIN ISLAND. Dave, AG8L, reports he will be active from the Windwood contest station for a week in October, and a week in November (no specific dates mentioned, probably around the CQWW contests). He will be using two callsigns: KP2/AG8L outside of contests, and WP2Z for contests. Activity will be on 160-10 meters, including WARC bands. Dave states he now has the NOVA satellite tracking software, so he will make an effort to get on RS-12 as time permits. The QSL routes are as follows:
QSL KP2/AG8L via KM6ON (now NN6C)
QSL WP2Z via KU9C (This is the new standard route for WP2Z)
Inquiries or comments should be send to AG8L@aol.com

OKDXA 1997 DX BANQUET. The Oklahoma DX Association (OKDXA) proudly announces the 1997 OKDXA DX Banquet featuring presentations by OKDXA member and DXpeditioner Frank Smith, AH0W, and Bill Kennamer, K5FUV, Manager of the ARRL's DXCC Program. It will take place November 8th. The banquet facility will be provided by the Broken Arrow Church of Christ, located at 505 E. Kenosha in Broken Arrow, OK. SPECIAL NOTE: OPDX InterNet Subscribers will receive the full detailed press release as an additional bulletin. For the latest banquet details, check out the OKDXA web site at: http://www.pcok.com/~n5ogp/okdxa/

QSL INFO AND NEWS.....
The 5A28 Log Search is now active on the 5A28 Austrian DXpedition web page located at: http://www.point.at/point/5a28.htm

Jean, F6AJA, reports that he has the HP1XBI logs up to August 25th and all direct request are on the way.

The following calls have a new QSL Manager of AC7DX: AH2BE/KH9, HL9MM, 8P9GI and KB6DAW/KH2/KH6/KH9. The new manager's address is: Ron Lago,

POB 25426, Eugene, Oregon 97402 USA

N7QXQ/HR6 CARDS. Bob, W7TSQ, reports that he has been receiving several cards for Gary without an SASE or postage. All direct requests will be answered, BUT the ones without SASE or postage will be sent by the bureau!!

Frank, ZP5FGS, has asked OPDX to report to its readers that K7OXB is not his QSL Manager and has never been. The wrong route was released a couple of years ago, then published in the German "QSL-Routes", but was later corrected there. Frank does not have a QSL Manager and all QSL cards are answered via the bureau or direct to the callbook address: Francisco Schubeius, P.O.Box 1059, Asuncion, PARAGUAY. To obtain a skeds with Frank or QSL help with ZP-stations, send inquires via E-mail at: fgs@infonet.com.py

VK9WM QSLS. It was reported that the group on Willis Island has asked that everyone QSL to: ODXG Willis Effort, P.O. Box 929, Gympie, QLD 4570, Australia (instead of VK4FW). Check for updates and details on their website.

SO1/SO5, WOLIN ISLAND (Update). NODXA member, Holger, DL7IO, provided OPDX with another update to their upcoming activity from this Polish island (Please refer to OPDX.322 and OPDX.321). Holger states that they have received a second callsign, SO1HH. So the German team will now use SO5OE/1 on SSB and SO1HH/EU132 on CW. They have also received permission to use the hotel roof (5 floors up) for their antennas. They will try to have two stations on the air all the time using FT-990's (with a little help) and R7, HF6V, dipoles for HF. Also, they will have 2m/70cm all mode equipment there which should be of some interest for Europe. Remember, activity will be October 2-5th. QSL route is DL7VRO. Via the bureau is "OK". It is also "OK" to send QSL request via E-mail to "DL7VRO@aol.com" and they will send cards via bureau.

TI, COSTA RICA. "The 59(9) DXReport" states K6CT and K9VV will be active as a Multi-Single entry in the CQ WW CW Contest as TI5KD.

TM7, FRANCE (Special Event). The special call sign TM7RL will be used from October 3-5th. The activity will be mostly in CW on 80-10 meters. QSL via F5LVL.

V8, BRUNEI. It has been announced that JO1RUR will once again be active from here for the CQWW DX Phone Contest. He will sign as V8EA and will operate as a Single OP/All Band entry. He placed 8th in the world last year as V85HG and hopes to do better in the ranking this year. He plans to set up better antennas for 160 and 80 meters. QSL to JH7FQK.

VK9L, LORD HOWE ISLAND. It has been announced that Nick, VK9LX, will be active from November 23rd to Decemeber 1st. Activity will include participation in the CQWW CW Contest. Operations will be 160-10 meters. QSL VK9LX: c/o VK2ICV Nick Hacko, P.O.Box 730, Parramatta 2124 NSW, Australia.

VS6, HONG KONG. F5PRH is reportedly in Hong Kong for at least the next 6 months and hopes to obtain a licence.

ZK1, PENRHYN ISLAND (North Cook). Just a little reminder! The ZK1XXP operation is now active and will be on the air until September 27th. Refer to OPDX.321 for details.

4597. W9INN Antenna Info plse

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-21 00:00:00 UTC
From: Bill Lupo <blupo@worldnet.att.net>
Message-ID: <3425E419.5067@worldnet.att.net>
Source record: 190157

Hi and thanks for reading this. I am thinking of buying a W9INN Model # HPD-3 a 40,80, and 160 meter dipole. I was wondering if anyone has any experience with this antenna.

I understand one version is 125' long and I would like to know how it preforms on 75 and 160 meters being half the length of a true 1/2 wave dipole. Has anyone ever compared it against a inverted L, a zepp antenna, or a true 1/2 dipole. Also did you feed it with 450 ohn ladder line or coax.

Thanks in advance

Bill,WR2M

4598. Radios in 97 Ford Explorer, okay?

Greetings!
I just acquired a new-to-me Ford Exploder...er Explorer XLT. I'm
curious what others may have done to install radios in the car...
especially the IC-706, FT-900, DX-70 class of rigs. Any suggestions?
Any problems for VHF/UHF; particularly with the engine cpu unit, etc
that I should be aware of?

Thanks & 73

Hi Jeff!

> So far, I have found the Sat Trak IV, Trak Box from TAPR, and the Kansas City
> Tracker. Are there any other choices? All of these are either VERY
> expensive, or simply not available!
>
> Any software mostly solution using parallel or serial ports going to a set of
> relays to control a rotor?

Yes. You can use FodTrack. I developed that package because I also disliked the cost for commercial solutions! FodTrack is FREE, and the package includes schematic diagrams for the interfaces (rotator and radio) and a PCB layout.

You can download FodTrack from ftp.amsat.org, and you can enter that server also from www.amsat.org, going to "downloadable software".

I yesterday uploaded a new release, version 2.4. I don't know if it has already been made available. If not, you will find version 2.2 there, which has a few less features in the software, but includes the same schematics.

The whole package, with software, documentation, schematics, PCB, etc, is less than 200 KB long. It should download quickly. If you like it, use it, if you don't like it, just throw it away...

> I've got a 386 with a couple meg of memory that I could dedicate to this
> function if I oculd build the hardware easily.

For FodTrack you need less than 300 K of memory... and it runs nicely as one task under a multitasking system like DESQview.

> Finally, how about some homebrew plans for 20 element CP beams.

I built a 2x8 for 2m and a 2x16 for 70cm. But I had lots of trouble with the feeding and matching, to get low SWR together with good CP. Can you read OrCAD schematics? I have the plans in that format only, unless you can tell me where I can find an OrCAD to PCX (or whatever) converter.

73,
Manfred, XQ2FOD.

Howdy from Texas,

Our microstation here in San Marcos
has been up nearly six months. The
only entity trying to shut us down
is the city, and they're not doing
a very good job... their case thrown
out of municipal court (for "operating
a bus. out of a res." the station is
not a bus., entirely non-commercial).

Broadcasting at 35 watts, reaching maybe
five mile radius, can be heard along I-35
between Austin/San Antonio. It is perfectly
legal, mainly because it doesn't bleed on
any lisc. stations. In fact, a new Houston
station had to turn down their power so
they wouldn't bleed us US (we're 105.9 FM).

Invite all to listen live over the net
via Real Audio, station is up 24/7, programming
is extremely diverse in nature.

Hear us at http://www.mediadesign.net

Thanks,
Chris

Ah! were talking apples and oranges! US (FCC) reqs wont allow field
strength levels to exceed a certain level. The FM10 with its tiny 10 Mw
output will create too high a field strength with a proper antenna.
What I was saying is that an "UNMODIFIED" FM10 cant be heard for more
than a hundred feet (AND IS LEGAL)...73

Hi Richard!

> I have just installed am Atlas 210 in my car. I have a ham stick
> antenna I just bought installed on the trunk with a trunk lip mount. I
> can hear everything great in the novice and lower end of the 80 meter
> band. The signals around 3947 are extreemely weak.

So the antenna is too long.

> Any suggestions? I have never been HF mobile

Many suggestions:

First: Forget 80m and go up to 40 at least, better to 20. The efficiency of reasonably sized mobile antennas is extremely low on on the low bands. For a typical 2m long whip with a decent, but not excellent loading coil, you can expect 40% to 50% efficiency at 20m, 8% to 10% at 40m, and not over 1% at 80m! That means a "gain" of -20dB at 80m! Of course, forget 160m...

Second: Make the antenna as tall as possible. As a rule of thumb, the height of the tip over the ground defines efficiency. That means that a shorter antenna mounted on the roof will give about the same efficiency than a longer one on the bumper.

Third: Use the best possible loading coil. You can use all the Q you can get. The Ham Stick is not a good example for coil Q...

Fourth: The ground connection at the antenna base is critically important. Make sure it won't rust. You need to conduct several amps of RF.

Fifth: Loaded antennas have a very narrow bandwidth. Adjust them for the exact frequency you will be using most, and use an antenna tuner to get more than about 20 kHz away on 80m, or more than 40 kHz on 40m without getting out of the car for readjusting.

Sixth: Most simple mobile whips cannot get close to 1:1 SWR. The reason is that at resonance they are basically a series connection of: a) The radiation resistance (0.1 to 5 Ohm, depending on band) b) The coil loss (5 to 50 Ohm, depending on quality and band) c) The ground loss (3 to 30 Ohm, depending on vehicle size, antenna location on vehicle, and several other factors). This usually adds up to between 10 and 50 Ohm, so your SWR at resonance can be anywhere from 1:1 to 1:5. And be aware that a MORE EFFICIENT antenna, having a lower loss coil, will have HIGHER SWR and LESS BANDWIDTH!!! To get a low SWR, add a small coil across the base (so to speak, shorting the coax). The value of this coil is typically 0.6 uH for 40m through 10m (it does usually not need to be changed), but for

80 m it is often somewhat higher. This coil acts with the remaining capacitive reactance of the antenna to produce an L matching network that raises the feedpoint impedance to 50 Ohm. As you need some capacitive reactance, you will have to slightly shorten the antenna or remove a turn of the loading coil, but you will get good SWR.

Seventh: DO NOT use a capacity hat just over the loading coil!!! This cheap trick lowers SWR and increases bandwidth, but it does so by lowering the coil's Q, that is, increasing its loss.

Eight: Always carry a dipole (or several, one for each band) and 20m of fishing line. When you are fed up with the bad performance of the whip, just stop under a nice big tree, throw a stone over it with your fishing line attached, raise your dipole and enjoy it! Even a dipole just 2 or 3 m above ground performs much better than the best mobile whip!

Ninth: Keep in mind that even with a lousy antenna you will be able to have lots of contacts and fun!

73,
Manfred, XQ2FOD.

: Hi Bob, in the military, it is "Call to Quarters".

When I was in (early 80's) it was "Charge of Quarters) or the NCO who was in
charge of the night guards for the living quarters.

Not that that has anything to do with HAM's.

Hi Sandy,
I have a 1995 Explorer that I am running a Standard C5900 (6m, 2m, 70cm) and it is working OK.

I did have a problem at one time when I transmitted on certain 2 meter frequencies at high power, the drivers side window would come down a couple of inches, however, I traced that to the duplexer I was using to split between the 6 meter antenna and the VHF/UHF antenna. The duplexer was the type that had the coax "pigtails" on it and the UHF connectors on there were poor quality and were leaking RF. When I replaced them with some silver teflon connectors, the problem went away.

I am using a dual band antenna, roof mounted with an NMO connector for 2 meters and 440 mhz. I am using an old Antenna Specialist disguise 1/4 wave whip for 6 meters. I removed the AM/FM antenna and replaced it with the 6 meter whip, put a splitter in the line so now I am using the 6 meter antenna for AM/FM and 6 meters.

A friend of mine who is a radio techinician for the county school board got a 1995 Explorer just before I got mine. In fact the manufacture date was only a few weeks before mine and he is having TONS of problems with CPU noise on some radio frequencies. We did a side by side comparison using a handheld. Mine was quiet as a mouse, his was putting out CPU trash all over the spectrum. Both Explorers were identical in options and features.

He has even had the computer replaced but nothing helped.

I know for a fact that you can safely use 110 watt UHF transmitters
in the Exploder. We've got 14 of them equipped that way. The big
problem is the blankety blank fuel pump. It is noisy, and can really
trash weak signal reception. Ford has a fix involving dropping the
tank and installing a filter. Sometimes it works.

>isn't normal is it?

You're right, it isn't normal, you should be able to get a better than 2:1
input VSWR on all bands, and it probably is the Chinese tubes. Their
quality is pretty dubious. You can try changing the capacitor values
on the input circuits, but I'd be strongly tempted to change the tubes.

(Note, you shouldn't worry if you can't get an exact 1:1 input match.
As long as the exciter's foldback circuits don't kick in, it'll still work
fine.)

Harper College in Palatine, IL will hold their one-day NO CODE Amateur Radio Review Course and Exam on Oct. 18, 1997. If you or someone you know or work with want an easy way to a License, this is it! Start at 08:30 review Radio, one hour lunch break, review Law and Operating Practices, then take the Exam at 16:30. Every subject on the exam is covered, hence if you have any physics or math background or have a radio background this is the "HAM CRAM " course for you.

Total course including pre course notes and exam $20.00.

Call 847-925-6994 for details.

Please copy and post at work and on local northern Illinois BBSs and nets.

Thank you;

Don't call them Ford Expolders. That's reserved for Chevy S-10 Balzers. I have a '97 Explorer also. Because my '95 Chevy S-10 Blazer did just that in my driveway , BLAZED. Electrical short (nope, not wired for Ham gear) under the hood early one Sunday morning. Totaled it out. Only by the grace of God it wasn't parked in the garage (I had the lawnmower out in the way) right under my two daughters' bedrooms.

Jeff, wd4nmq

Sandy, If you are a ARRL member you can receive free info from them,
also FoMoCo has a RFI Dept that you can contact but I don't know off
hand myself the address. Perhaps someone else might be able to furnish
this as well as ARRL. If you go to a Ford Serv. Dept. talk to the Serv
Mgr if possible, they have info showing how the power lines and coax
should be run on that vechicle to prevent RFI. Good Luck. Joe W8HR

C. Crane, http://ccrane.com , has it listed in their catalog. They state that the AH-100 can be modified for 10 meters. I would love to have a handheld 10m SSB rig!! They also have the AH-50 six meter rig (FM).

With Radio Shack carrying so many other things, why they don't have this?

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible
set of coordinated logging and packet features.

XMLog is available on my home page:

http://www.xmlog.com

A new version (2.04) is now available which includes a
feature requested by several users - a new log window
menu item "Display/Show All Entries for Call". This
item will display all QSO's which match the call in
the currently displayed entry.

This version also includes support for PacketCluster nodes
operating on the Internet.

*** Feedback ***

Let me know if you:
- Want more info
- Can't fetch the file
- Want a diskette instead

Have fun...

Source record: 190038

Some more comments on my personal ham situation (I'm the guy who posted the "No ham class has a monopoly on bad operating" message).

I got my Novice ticket in 1980. I passed the written exam by ONE question, but aced the code test. I'm a musician, and I enjoy languages, patterns, and the like. I found the code fun, and even a little enchanting in that it was a "secret" language with a romantic history - the Titanic's radio op frantically pounding out SOS - soldiers in WWII sending critical messages via CW - news stories going out via telegraph to local bureaus. And so on.

I didn't fight in WWII. I was 13 years old in 1980 - so much for the "olde fahrtz" stereotype in my case.

Another thing that came naturally to me as a young person attempting to become a ham was this: I just inherently respected the tradition into which I was entering. I was a creative, if somewhat misunderstood kid, and I had plenty of individuality to express. I rebelled against authority when I considered its judgments to be arbitrary or without merit. However, I just took the amateur radio testing requirements at face value. This is what I have to do to get involved? OK, fine!

I also immediately had the intention of upgrading to voice privileges, since I thought that would be the most fun part of amateur radio. A couple of months after getting on the air, I got my General. The code was easy - I had been very active with my Novice privileges, which were limited to HF CW. No 2 meters for me! About the only other popular mode was RTTY, and even that was esoteric. For me, it was the DX that called - the thrill of having a distant signal echo in response to ME - sitting at my desk in my room - was, in today's terminology, way cool. So, plenty of practice led to comfort with the code. 13 wpm was cake.

I stayed a General for 16 years. My radio interests were DX, HF, CW, SSB, and antenna building. I wasn't terribly interested in the electronics esoterica required to upgrade, and didn't pursue it until a renaissance in my radio interest a year ago. At this point, the books were out with the question pools. The Advanced test was by far the most difficult - lots of heavy technical content. The Extra exams were much easier, and I got my CW ears

back up to the 20ish wpm area quick enough to pass the code test. These books, though - I'll admit - made the tests VERY manageable. How tough is a test when you can see all the questions? You just have to have enough RAM in your brain to store all of the concepts.

I bothered to upgrade mainly so I didn't have to worry any more about what parts of the bands I could use... :) Plus, now that I'm privy to it, it's clear that 90% of all the DX sits down in that first 25 kHz of 80, 40, and 20.

I don't believe that this makes me some kind of poseur. I've been a ham for 17 years, and I believe that I'm a disciplined, decent operator. The respect for the traditions of the service/hobby that I had from Day One is what keeps me caring about the niceties of polite operating. When you have no perspective on the history of something, or the effort put forth by others to evolve a field, you may find it tough to care about their seemingly "stupid" rules. By the same token, change is inevitable, and questioning these rules is good. However, it must be done within the context of understanding what came before. It must seek to reconcile the achievements of the established ham with what is appropriate for the new ham to fit in.

I remain in favor of the code requirement, although I am very thoughtful about its relevance in light of the many protests. If all the ballyhoo was coming from the un-initiated, it would indeed be easy to ignore. After all, how can someone with no on-the-air HF experience be qualified to comment on what's relevant therein? However, there are several very vocal, experienced people who clamor even more loudly against the requirement. To me, they deserve your critical ear and judgment. It's hard for me to judge, since my 500 Hz filter is often engaged. I don't know what a sans-CW HF world sounds like. Even when I'm up in the higher regions (I *do* talk as well!), there's often a signal poking through in dits and dahs. I find it nice to be able to understand it; there might be a valid message to be received. This has happened!

However, I pass RTTY (and other weird digital noises) signals too, and I can't copy those off the bat. I don't find that this inhibits my ability to operate responsibly on HF, but am I deluding myself? To me, literally half of the HF experience - AT LEAST - is Morse code. It is the romance of shortwave radio. To miss out on it would be a lamentable thing. However, do new hams NEED to be able to understand it in order to be good hams? I just

don't know. I think there are probably more important things, such as decency and respect for others on the air, and adherence to safe and efficient equipment use.

If only the Golden Rule stuff were easier to teach to adults... Man, I sound like an olde fahrt! Sorry for the long post.

yawn

I leave this newsgroup for a few weeks so that I might move myself and my belongings across the country to embark on a fresh opportunity and begin employment with a new company. Upon signing on here and checking messages for the first time in 20 days, I soon notice that the newsgroup is as polluted as always. The same tired old voices, preaching the same old nonsense...hate, discontent, named-calling, false accusations, etc. What an amazing waste of bandwidth. Someone wake me up if and when anything intelligent or relevant is ever posted here.

(going back to sleep now)

-Drew in Windy Western Kansas-
Coming soon...VERY soon...to a radio station near you ;-)

Don't call them Ford Expolders. That's reserved for Chevy S-10 Balzers. I have a '97 Explorer also. Because my '95 Chevy S-10 Blazer did just that in my driveway , BLAZED. Electrical short (nope, not wired for Ham gear) under the hood early one Sunday morning. Totaled it out. Only by the grace of God it wasn't parked in the garage (I had the lawnmower out in the way) right under my to daughters' bedrooms.

I also received a Novice ticket when in high School years ago. Since then my job has included work with UHF/VHF business and emergency systems, setting up HF links in Somalia and Cambodia, REACT member, CAP communicator, etc. Oh Yes - I also hold a Tech Ticket. I have been on many HF "Official" nets and know how to operate them. I have NO interest in code as with the advances I have seen it has very little use in the world of communication today. Can you imagine sitting in Somalia and trying to send a long supply list by code when a few minutes on voice will do? There needs to be more of a way to eliminate those who do NOT operate properly on ANY band! Just my 2 cents worth - but reall now is code a NECESSARY way to communicate? I have the tech ticket for emergency use in my car but do not personally like to sit about and gab about my garden - great for those who do - but "we" are not all the same.

Enjoy - Dinh (call signs missing to prevent spam)

Good to see you are taking some time to surf the net. :-)

This is an invitation to check out one of UC's most active service groups,
a group that is one of the nation's FINEST amateur radio clubs.

Come see what the UC Amateur Radio Club is all about. Are you a faculty or
staff member? A grad student? A freshman, sophomore, junior, or senior?

Are you a scanner listener? How about shortwave? Perhaps you are
a licensed "ham" or would very much like to be one?

Getting the idea? We have a long (73 year) history of catering to the
interests of people throughout the UC community, and we are inviting YOU
to see what it's all about!

So here's how! Send some e-mail to w8yx@uc.edu. Or, phone me at
(513) 961-5237 evenings, or (606) 386-5387 days. My pager is at 589-9822
if you would like me to contact you (almost) any time!

-73- (that's "best regards!") from Steve, UCARC President

Do you know how to use email? Then you should be making money hand over fist on the Internet! By the time you're finished reading this letter, you'll know EXACTLY how I'm doing it, and how YOU can too!

Here we go...

Introducing "The NEW Complete Internet Business Starter Kit!!!"

If you can spare just 5 minutes of your time, I promise to deliver an opportunity unlike anything you've ever seen!

You CAN start a very profitable business on the
Internet WITHOUT spending a lot of money!

How would you like to start a spare time business with YOUR OWN kit of cutting edge information products? What if everything in the kit came with unlimited and unrestricted ownership rights? You could sell this much sought after information for whatever price you wanted! And get this... You could even offer those rights along with your products! You'll be helping others start their own business!

Would you be interested in an opportunity like this?
How about if all the work has been taken out of it?

As you know, there are many "business opportunities" floating around on the Internet. Some great, some not so great. But how can you tell the REAL opportunities from the money pits? YOU CAN'T! All you can do is choose a path and hope it's not a dead end. If you CAN find the right opportunity, you can make a bundle of money in a very short time. Here's why...

The "Internet population explosion" is now under way. The actual numbers are a little hard to fathom, but here they are... In 1996 alone, over A MILLION people per MONTH have been signing up with an internet access provider! That's over 12 MILLION people per year! Even if this rate remains the same, and many expect it to increase, there will be more than 100 MILLION people online by the year 2000!

So what does this mean to you? Simple. Like you, many of these 12 million newcomers per year will be looking for legitimate business opportunities. They'll also be looking for specialized information that will teach them how to start and operate their own high income, online business. The fact is, there are simply just not enough sources to meet these overwhelming demands!

That's where you come in!

You can meet BOTH of these demands with this NEW Complete Internet Business Starter Kit!

Now, in a minute I'm going to tell you exactly what this information kit consists of. But before I do, I want to explain how it's a little different from ALL the others...

Everything in this kit comes with UNLIMITED AND UNRESTRICTED REPRODUCTION RIGHTS!

O.K. So you've seen reprint/reproduction rights being sold before.

*** BUT NOT LIKE THIS!! ***

"UNRESTRICTED" means just that! Not only can you sell this kit as YOUR VERY OWN, you can sell ALL rights along with it! That's what makes this kit sell with very little effort! Check around! You'll never find another company that lets you do this! (Actually, I've taken a little heat from some of my fellow information brokers over this decision. They insist I'll create my own competition. But when I explain the raw numbers of people jumping online every month, they seem to quiet down very quickly!)

All right, here's what this exciting new information kit consists of...

1. "The Information Freeway!" It covers everything from rules and regulations, to how to use the newest online marketing strategies, including direct email!

You'll learn everything you need to know about this brand new world of opportunity!

2. 300 new reports designed to help upstart entrepreneurs! These aren't the typical out of date reports that circulate till the end of time. Originally published in 1996, these reports contain real info you can use! Check these out...

How To Protect Your PC From Email Viruses, How To Get Over 300 Prospects To Email You Weekly, Insiders Secrets On Advertising With The Major Online Services, What's Wrong with The World Wide Web, and Taxes For The Home Based Business Owner, and many, many more!

3. A free copy of the latest version of Pegasus, the most advanced e-mail software ever, and by far the easiest to use. With Pegasus you can send out 500, 1,000, even 50,000 sales letters every single day.

4. A working demo copy of Email Pro, the brand new $500 software used by all the major online marketers. With Email Pro you can extract thousands of targeted e-mail addresses per hour from the major online services.

5. 100,000 freshly extracted e-mail addresses of opportunity seekers and multi-level enthusiasts. All of these addresses are from the major online services and the Internet. America On Line, Prodigy, CompuServe, Microsoft Network, Genie and Delphi. These are people who enjoy reading about new opportunities and they are Buyers.

6. And get a load of this!! To make this a Complete Internet Business Starter Kit, you'll get your own customized version of this same sales letter. You can use any or the entire letter as your very own! All the "work" has been done for you! It just doesn't get any easier than this!

O.K. Let's get down to the nitty gritty!

I'm sure you're thinking, "O.K. Sounds good, but how much is this gonna set me back financially"? You've seen what everyone else is charging for information that's not nearly as comprehensive as this..$200? $100? $59.95?

Well, Prepare To Be Shocked!

The entire NEW Complete Internet Business Starter Kit is only $39.95... plus $5.50 Shipping & Handling

Sound too good to be true? That's what others have said. That is, until they received their kit and saw for themselves just how easy it is to make money on the net!

Here's a little more incentive to check this out...

2 FREE BONUSES FOR EVERYONE WHO ORDERS WITHIN 7 DAYS!!!

1. The List! Did you know there are over 1,000 FREE and ALMOST FREE advertising sites? I'll include a listing of the addresses. (There's a section in the manual that teaches you exactly how to post ads at these sites.)

2. An EXTRA 100,000 fresh e-mail addresses of opportunity seekers and multi-level enthusiasts. That will give you 200,000 eager buyers to mail this and any other offer you may have. This list has been known to pull as much as a 15% response rate. Can you imagine how much money you'll make with even a 2 or 3 per cent response?

Well, that's about it. As you can see, this is truly a Complete Internet Business Starter Kit! Right down to your own deal closing sales letter! You're already paying to be online, why not make some money? Even if you sell ONLY ONE KIT, you've broken even! Everything after that is pure profit!

Now that you know what you stand to gain, let's consider what you have to spend. Just $39.95! This is a small cost for the collection of reports and information that can have you in business, the day you receive your information package.

Remember, not only will you be learning the most up to date information about making money online, you'll be teaching others how to succeed! (And making money in the process!)

########################## NEW ADDITIONAL OFFER ####################

Question: Remember when you first considered going on line? You had dozens of questions and didn't know where to go for the answers.

Many of us that had these questions started reading newspaper and magazine articles to familiarize ourselves with this new media! We also started reading "classified ads" to see what others are doing on-line!

GUESS WHAT? MILLIONS ARE DOING THE SAME, TODAY!

With the rapid expansion of the Internet, the information in the $39.95 Business Kit is a necessity, today. But many CUSTOMERS that I've spoken with have a desire to market this package in the 'Print Media', as I do (magazines &

newspapers, etc.)

The Business Kit gets you "Safely" up and running on the Internet, but what about those who are just coming on line. Or those just considering if it's PROFITABLE to go on line with their business?? This segment of the population is still reading Newspapers and Magazines to see what they can learn about the subject before 'jumping-in'.

Being involved in Multi-Level-Marketing and Mail-order businesses have taught me a great deal through the years. I've made plenty of mistakes along the way.

***************YOU DON'T HAVE TO!!!!**************

I've developed an additional package of information to compliment the Internet Business Starter Kit. I call this the 'PLUS' package. How can this help you?

1. Do you know the best newspapers to advertise in?

(I'll supply a listing of hundreds of newspapers and their phone numbers!)

2. Do you know where to get an 800 number with voice mail for advertising at the very lowest possible price? (Including too many benefits to list) (I'm constantly updating information to provide the best possible programs and pricing!)

%%
SPECIAL OFFER...........................IF YOU ORDER WITHIN 7 DAYS !!!

I'LL SEND THE 'STARTER KIT', PLUS THE ADDITIONAL PACKAGE FOR THE TOTAL PRICE OF $34.95 and I'll pay the shipping & handling myself. That will save you an additional $10.50!
%%

Thank you for your time.

Just use a blank piece of paper to order, or you may print this document and use the order form below.

To Order: SELECT ONE:....................

I am ordering within 7 days. Send me The NEW Complete Internet Business Starter Kit for the total price of $34.95______

I am ordering after the 7 day period. Send me The NEW Complete Internet Business Starter Kit for $39.95 + $5.50 S&H. $45.45_____

Both. Each level of license is built upon the previous. You don't have to
get an advanced license to be eligible for an extra, but you have to pass all
the written elements.

(CW is different; if you pass the 20WPM code test, you have also met the
requirements of the 13WPM test [and 5WPM for that matter] and you don't have
to take the lower speed tests.)

To reach Extra, you have to pass *all* the written test elements,
so yeah, you have to pass the Advanced element too. But you
can do it in one sitting if you like, IE you don't have to first
get an Advanced license and then go take the Extra elements
at a later time.

The Morse test is different. You can directly take 1C and ignore
1B and 1A if you like. The idea there is that if you can pass
20 WPM, there's no need for you to also pass 13 WPM and
5 WPM. But the written elements are cumulative.

4635. Re: CB Radio: Local Police Seizing Radios... Consumer electronic equipment at fault

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-23 00:00:00 UTC
From: "Amor Powers, CB Radio" <power@CB.Radio.net>
Message-ID: <3427A4B3.5EA5@CB.Radio.net>
Source record: 189962
Cross-posted to: rec.radio.cb,alt.radio.scanner,rec.radio.amateur.misc

POLICE WILL SEIZE YOUR RADIOS
Recently proposed USA legislation would permit local authorities to march into your home and seize your radios. Other proposed legislation deals with restricting which frequencies we can listen to! Combined with local antenna restrictions and covenants, this legislation (if passed) will be the death knell for radio as we know it.

WHO IS AT FAULT?
Consumer electronic (stereos, TVs, VCRs, telephones) companies flood the market with audio equipment that is designed to sell cheap. This usually means that the equipment is so poorly designed that it easily picks up Radio Frequencies by mistake. So, whenever a nearby transmitter is operating (CB, Ham, HF), "Interference" occurs. The problem mainly occurs below about 60MHz, but is most severe below about 30MHz. This is due to state-of-the-art consumer IC design using silicon structures which have about a 50MHz range.

RFI IN OUR SOCIETY
This RF "Interference" causes problems which used to be resolved in a neighborly way in the old days. In modern society, people do not know their neighbors. So, the police are called to eliminate the "disturbance". Instead of recommending that the consumer electronics user fix the faulty equipment, the police attempt to solve the "crime" by taking out the "perpetrator" (Radio Operator).

FCC DOESN'T CARE... WHY SHOULD THEY?
The FCC has no testing verification program for consumer electronic equipment RF susceptability. Only emmissions (thank Goddess for little favors). This is good because they have traditionally not made rules on what frequencies can be received... If a stereo is also a "shortwave receiver"(by accident), the FCC doesn't care. And they shouldn't.

Buyer Beware!

If you're talking about seizing illegal CB radios with big
cheap dirty 500-watt amps, I'm all in favor of it.

IMHO, they ought to march the high-power CB'ers off to jail
while they're doing it.

Tom,

To go from General to Extra you need:

Element 1(C): 20 WPM Morse
Element 4(A): 50 question Advanced written test.
Element 4(B): 40 question Amateur Extra written test.

Good Luck!

4640. Kenwood TM-261A programming

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-23 00:00:00 UTC
From: David Barnes <david_barnes@hp.com>
Message-ID: <3427EF71.3ED9@hp.com>
Source record: 189967

I just got a TM-261A as a gift. Great rig, but I didn't think that the user interface was quite as user friendly as my Alinco HT, and the manual doesn't explain some options very well, IMHO. I also had some problems programming the memory naming function. The steps in the manual were very clear but just didn't work. I called Kenwood tech support, and the guy insisted that the manual was correct. Then another tech support voice in the background hollered that the manual was wrong and left out one keystroke. Voila, it works fine now.

Didn't seem like tech support had any real hands-on feel for the rig. Are there any other inconsistencies that anyone knows of?

Also, the manual tells you how to store simplex frequencies into memory and how to store split (send & receive) frequencies. But it's way easier to toggle the offset to + or -, then store this setting in memory when you store the repeater frequency (this isn't even presented as an option in the manual). When would you ever want to go through the trouble of programming both the receive frequency and transmit frequency, vs. using + or - offset? Pardon my naivete here.

I'm looking for any documentation on a very old (tube) HF set: SBE model 33 (15, 20, 40 and 80 meters). Probably made in USA. The 40 and 80 meter band starts at 7.15 and 3.8 MHz, but in Europe it is UP TO these frequencies. Want to modify this set to use it as a receiver. Anyone know anything of SBE??

I'm also looking for a European adress of the importer of ADI VHF/UHF transceiver. As you probably already noticed my call is pd1ADI so I want to ask those guys whether they can sponsor me while I'm like a living commercial for them (hi).

Any info is welcome!

Thnx

I'm am desperately looking for modifications on Kenwood TS 780 VHF/UHF all mode base rig!

I want to:

- Extend the RX range (want to be able to receive around 150 MHz)
- Improve RX sensibility (is quite OK but if possible better RX would be nice)
- Pump up the HF power if possible (is now 10 watt, I've heard that 3dB gain is possible)
- Setup the Signal meter properly (The needle's a bit heavy.. hi)
- Change the "low power" settings (should be 1 watt, is now 180 mW)
- Built in CTCSS (To open "modern" repeaters)

The Kenwood TS 780 is a 80's VHF/UHF set, please be so kind to review your "old" docs and help a just started Dutch HAM friend out!

Thanks in advance!

Pleun (PD1ADI locator JO21WT)

4644. Code debaters, pls read: Last MARS msg

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-23 00:00:00 UTC
From: "Roger D. Placer" <rogerp@lucent.com>
Message-ID: <rogerp-2309971359010001@esoterica.pez.bell-labs.com>
Source record: 189971

The following is an excerpt from the final CW message broadcast from MARS on September 30, 1996. All caps are not my doing. I'm posting this because it offers a rare glimpse into a perspective that offers the duality of feelings on each side of the code debate. On one hand, it's recognized that CW as a mode is no longer the best or most effective means of communication. This is the pragmatic, practical, forward-looking side. On the other hand, this realization is being made by those who have used CW for decades and seen it aid in hundreds of thousands of missions, both trivial and exceptional. MARS is the Military Amateur Radio Service, for those who don't recognize the acronym.

My view is that the staunch code-test folks might do well to shed a tear, but understand the reality expressed in the message. The more extreme among the no-coders would do well to note the genuine emotion of the message, and realize that the history and tradition are profound, and worthy of great respect.

Take it for what it's worth.

SUBJ: MARS SPECIAL CW BROADCAST (ENDING OF MARS C.W. OPERATIONS)
1. FROM THE VERY BEGINNING OF MARS OPERATIONS IN 1925 WHEN THE ARMY AMATEUR RADIO SYSTEM (AARS) WAS FOUNDED, C.W. HAS PLAYED AN INTEGRAL PART IN THE TOTAL MARS COMMUNICATIONS SYSTEM. ALTHOUGH IT HAS A LONG PROUD AND DISTINGUISHED SERVICE ITS IMPORTANCE TO MILITARY COMMUNICATIONS HAS BEEN REPLACED OVER THE YEARS BY NEWER DIGITAL MODE TECHNOLOGY.
2. WE BID OUR OLD AND FAITHFUL FRIEND FAREWELL WITH VERY DEEP AND STRONG EMOTIONS, BUT KNOWING WELL THAT THE TIME FOR PARTING HAS COME. WE SHALL MISS YOU, OLD FRIEND, BUT NEVER FORGET THE LEGACY YOU HAVE LEFT US AS WE PREPARE TO MOVE FORWARD INTO THE TWENTY FIRST CENTURY. LIKE AN OLD SOLDIER, AIRMAN, SAILOR, AND MARINE, THE TIME HAS COME FOR YOUR RETIREMENT FROM MARS SERVICE. WE SALUTE YOU AS YOU STEP OUT SMARTLY TO THE RYTHMIC BEAT OF THE DRUMS INTO A WELL-DESERVED RETIREMENT FROM MARS SERVICE WITH THE HIGHEST OF HONORS. CHIEF NAVY MARINE CORPS MARS.

Along with the big time hf operators "20 meters" who run illegal.
They need to fine and take them to jail also!!!! Do some of you out
there want the local police to come in and take your 4cx1500a7 amps?
Think about what your saying. If one person near you don't like all
those antennas above your house They can start trouble with you and
bring the local meat heads in then it becomes political, new laws
regulations so forth think about it what is legal? Do not think the
local government will stop at "CBers" we will be included. So you self
serving all mighty do gooders out there need to think before you spot
off about the government needs to take care of this or that. You have a
ham licence not a bitch licence. What were you doing on 11 meters if you
can not stand it. Do you stick to all the rules? Do you own any radios
that can transmit out of band? Do you ID every 10 min SO PEOPLE CAN
UNDERSTAND WHAT WHAT YOUR CALL IS.Do you use bad words ? Some of you may
not but I know a lot of you do. Once they do get involved at a local
government then you will be next. Is it worth all that for a band that
most of us do not use anyway? Do we what more regulations on us by local
towns and states who really do not have any idea about radios?
I hope some of you will listen and enjoy Ham radio stop bitching about
things that are not really that important. Like loosing bands, new
scanner laws that make it illegle to listen to local police and lots of

other government over stepping its duty.

Ron Hardin (rhh@research.att.com) wrote in the Origin of "CQ?" thread:

>CQ was translated as ``seek you'' by Hashifisti Scratchi's column in
>CQ magazine in the '50s, which may account for a ``seek you''

I asked this group about five years ago who was the author of
Hashifisti Scratchi and came back with no definitive answer.

Does anyone have any new ideas? It didn't fit Wayne Green's humor
style (WEG was the editor of _CQ_ in those days), so I doubted it
was him. W3FQB (G. Franklin Montgomery) was a better possibility,
but since he's a SK we can't ask. Perhaps it was Gil, W1CJD, the
QST cartoonist, gone renegade to the competition.

Such a column certainly wouldn't be politically correct these days.

SB QST ARL ARLB056
ARLB056 Al Severson, AB8P, SK

Former Great Lakes Division Director Al Severson, AB8P, of North Olmsted, Ohio, died September 22, 1997, following a long illness. He was 65. Severson served as Great Lakes Director from January 1990 until June 1995, when he resigned for health reasons. Previously, he'd served as a vice director from 1985 to 1990. He was a Life Member of ARRL, and a member of QCWA and the West Park Radiops as well as many other clubs throughout the Division.

Severson had been licensed for approximately 45 years. During his tenure as Great Lakes Director, Severson was a frequent visitor at various hamfests in the Division.

Born in Minnesota and raised in the Dakotas and Washington State, Severson graduated from Golden Gate University in California. For 26 years, he worked as a field underwriter for State Farm. Earlier, he had served in the Marines in Korea and was awarded a Bronze Star, Navy Cross and two Purple Hearts.

Survivors include his wife, Charmaine, and a son, Craig Severson (W8CS, ex-AB8O), and a daughter, Catherine Sanders.

A service will be held September 28, 2 PM, at St Barnabas Church, Bay Village, Ohio. Cards and letters are invited to Charmaine Severson, 28381 North Park Dr, North Olmsted, OH 44070. Telephone calls are welcome after the memorial service.

Miscellaneous Electrical Engineering Books for Sale -- Toronto Area

Hello. I am offering the following books concerned with electrical engineering (with some general computer and electronics books) for sale for those living in Toronto. If you wish to purchase the books, you must be willing to come pick them up from me in downtown Toronto, either at my home or on the University of Toronto Campus. Reply directly via e-mail -- it is not necessary to respond to the group. Thank you.

Proceedings of the 1993 IEEE Symposium on Electromagnetic Compatibility (487 pp., softcover; IEEE Press, 1993) -- $2.00

Radio Data Reference Book, 5th edition by G. R. Jessop (244 pp., hardcover; Radio Society of Great Britain, 1985) -- $3.00

Electronics Engineers' Handbook, 3rd edition Donald G. Fink, Donald Christiansen, eds. (~1200 pp., hardcover; McGraw-Hill, 1989) -- $10.00

Feedback Control Systems by Charles Phillips and Royce Harbor (626 pp., hardcover; Prentice Hall, 1988) -- $5.00

Undersea Lightwave Communications Peter Runge, Patrick Trischitta, eds.(621 pp., hardcover; IEEE Press, 1986) -- $5.00

Radar Cross Sections of Complex Objects W. Ross Stone, editor (533 pp., hardcover; IEEE Press, 1990) -- $5.00

Communications Receivers: Principles and Design by Ulrich Rohde and T.T.N. Bucher (563 pp., hardcover; McGraw-Hill, 1988) -- $5.00

Spectrum Management and Engineering Fredrick Matos, editor (493 pp., hardcover; IEEE Press, 1985) -- $4.00

Microwave and Millimeter-wave Mixers Erik Kollberg, editor (423 pp., hardcover; IEEE Press, 1984) -- $4.00

Monolithic Microwave Integrated Circuits Robert Pucel, ed.(499 pp., hardcover; IEEE Press, 1985) -- $4.00

Proceedings of the Fifth Canadian Symposium on Remote Sensing(601 pp., softcover, Canadian Aeronautics & Space Institute, 1978) -- $2.00

Essential Circuits Reference Guide by John Markus and Charles Weston (531 pp., hardcover; McGraw-Hill, 1988) -- $6.00

Microwave Solid State Circuit Design by Inder Bahl and Prakash Bhartia (914 pp., hardcover; Wiley, 1988) -- $8.00

Frequency Synthesizers: Theory and Design, 3rd edition by Vadim Manassewitsch (606 pp., hardcover; Wiley, 1987) -- $5.00

Internetworking with TCP/IP: Principles, Protocols, and Architecture by Douglas Comer (382 pp., hardcover; Prentice Hall, 1988) -- $3.00

Microwave Engineering, 2nd edition by T. Koryu Ishii (564 pp., hardcover; Harcourt Brace Jovanovich, 1989) -- $5.00

VHF/UHF Manual, 4th edition by G. R. Jessop (~500 pp., hardcover; Radio Society of Great Britian, 1983) -- $3.00

Electronic Communications, Third Edition by Dennis Roddy and John Coolen (788 pp., hardcover; Reston, 1984) -- $4.00

The ARRL UHF/Microwave Experimenter's Manual (446 pp., softcover; American Radio Relay League, 1990) -- $4.00

Introduction to Electric Circuits, 6th edition by Herbert W. Jackson (784 pp., hardcover; Prentice Hall, 1986) -- $2.00

Field Theory of Guided Waves, 2nd edition by Robert E. Collin (852 pp., hardcover; IEEE Press, 1991) -- $10.00

IEEE Standard Dictionary of Electrical and Electronics Terms, 4th edition (1270 pp., hardcover; IEEE Press, 1988) -- $8.00

Microwave Filters, Impedance-Matching Networks, and Coupling Structures by G. Matthaei, L. Young, and E.M.T. Jones (1096 pp., hardcover; Artech House, 1980) -- $20.00

Turbo C: The Essentials of C Programming by Al Kelly and Ira Pohl (472 pp., softcover; Benjamin Cummings, 1988) -- $2.00

The Waite Group's Turbo C++ Bible by Naba Barkakati (1084 pp., softcover; SAMS 1990) -- $2.00

Engineering Contributions to Biophysical Electrocardiography Theo Pilkington and Robert Plonsey, eds. (247 pp., hardcover; IEEE Press, 1982) -- $2.00

Modern Acoustical Imaging Hua Lee and Glen Wade, eds. (433 pp., hardcover; IEEE Press, 1986) -- $3.00

Adaptive Methods for Control Systems Design Madan Gupta, editor (461 pp., hardcover; IEEE Press, 1986) -- $3.00

Low Noise Microwave Transistors and Amplifiers Hatsuaki Fukui, editor (461 pp., hardcover; IEEE Press, 1981) -- $2.00

Adaptive Signal Processing Leon Sibul, editor (343 pp., hardcover; IEEE Press, 1987) -- $4.00

C: A Reference Manual, 3rd edition by Samuel Harbison and Guy Steele, Jr. (392 pp., softcover; Prentice Hall, 1991) -- $2.00

Schaum's Outline Series: Theory and Problems of Numerical Analysis by Francis Scheid (471 pp., softcover; McGraw-Hill, 1988) -- $2.00

Schaum's Outline Series: Theory and Problems of Transmission Lines by Robert A. Chipman (236 pp., softcover; McGraw-Hill, 1968) -- $2.00

The GMARC is having a free hamfest on October 11, 1997. It will be held at Meeks Park just west of Blairsville, Ga. on State Highway 515. It will start at 8:30 AM local time and talk-in will be on the K5PRE repeater at a freq. of 146.955 minus and no tone.

Blairsville is nestled in the mountains of North Georgia and the weekend of the hamfest is also the first weekend of the Annual Sorghrum Festival. Bring your family and spend a weekend in the mountains looking at leaves and radios, and tasting biscuits with sorghrum syrup on them. You will love it.

See you in Blairsville

4663. What is a"BOATANCHOR" ??

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-23 00:00:00 UTC
From: bry@REMOVE.mnsinc.com
Message-ID: <34271a9f.5124612@news.mnsinc.com>
Source record: 190047
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,uk.radio.amateur,rec.radio.swap,rec.radio.shortwave

What is a"BOATANCHOR" ??

Note the spelling. It is NOT Boat Anchor!!

Older radio equipment. Military transmitters and receivers
particularly seem to weigh a TON!
Older amateur radio equipment is qiote often described as a "B.A." or
a boatanchor. Heaby, no one wants it! It may need repair. So the
average appliance operator will not mess with it. That UNUSUAL guy
among unusual hobbyists is the "BA OP" who loves to shine the front
panel of a GLOBE KING or a an R-390A!! There are thousands of them out
there! They lurk at hamfests and in basements!

The BAs themselves are old, dusty, and they GLOW IN THE DARK!!
Because they use tubes and heavy iron. They get the job done in a
noble way! They sound "FB on AM, OM!!" They simply SING on CW!

The people who love and collect these old beasts have a number of
haunts on the web! Among them a FREE Reflector at TEMPE jsut called
Boatanchors, or informally known to some as "Free Boatanchors."

No they don't always have FREE RADIOS, but it is a FREE list as
opposed to being a PAY list like the other one!

So, IF you would like to try the FREE LIST, here is how to subscribe:

Simply send a message to:
LISTSERV@LISTSERV.TEMPE.GOV

with NO SUBJECT, and the text:

subscribe boatanchors <your full name>
as in " Joe H. Smith"

Alternatively, if you want to subscribe
anonymously, send the command: "SUBSCRIBE BOATANCHORS
Anonymous". Your subscription will then be hidden
automatically.
==========

Enjoy!! 73 de AF4K, Bry

Yes, that's exactly correct. The ITU voice equivalent of "CQ" is
"Hello all stations." Those who complain of hearing code prosigns
used on voice should themselves be using "Hello all stations" in
place of "CQ."

That's like placing the cart before the horse, Bob (finding a phrase that fits the letters). If the letters are to fit a phrase, then it would have made more sense to use AO for "all operators" (keeping in mind the prosign came into being on landline telegraph - the prosign was used to call all operators up and down the wire).

A good number of the prosigns we use today have their roots embedded in landline Morse. Their origin has been lost to history.

KaGOLD is clearly the winner out of the six digital software
packages I have used. It works well under Windows 3.1 and
Windows 95, and is a DOS program written in native code by
two very intelligent programmers/users. All digital modes
effectively work the same when using this program, some of
the tricks of which I am still finding! Would that all my software
had been designed so well. Four years of it and I am still
impressed by the thoughtfulness of the programmers. Sure,
it costs -- but to me it is worth even more than I paid. -- Fred

Despite what anyone says about the technology, these old rigs represent the utimate in quality. Back in the days when you could call up the manufacturer and actually talk to the engineer- in contrast to today then you get some marketing guy who has to be threatened before he will even send a schematic. And passes the buck to some guy in Japan at the slightest hint of criticism.

Rob.

Quotation:

MAJOR SOLAR FLARE ALERT

ISSUED: 05:45 UT, 24 SEPTEMBER

/\

* NIL to Low Impact Possible *

http://solar.uleth.ca/solar

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 24 Sept)

Flare Size: Class M5.9/1B
Location: S31E19 (Region 8088)
Tenflare: 710 sfu at 24/0246 UTC, Duration: 2 minutes.
SESC Times: Begin=24/0243 UTC, Peak=24/0248 UTC, End=24/0305 UTC
(SESC Times are based on a half-power-point system)
Sweeps: Type IV observed at 24/0248 UTC.

SYNOPSIS:

A major class M5.9/1B tenflare was observed from Region 8088
(S31E19) at 02:48 UTC on 24 September. This flare was impulsive and
fairly brief in duration. A Type IV sweep frequency event was reported
with this event, but a Type II has not yet been reported (it may have
been obscured by the Type IV)."

DAMN! Every time there is a good flare, it happens after sunset here.

I have a couple of peg points for the 90 BroncoII which is very
similar to the 90 Explorers. 200watt CB is not problem. 50watt
2meter and 440 no problem. Had an alternater noise on CB, FM, and AM.
I put a large capacitor (1000mfd) between the radio power wire and
ground. All quiet on all the radios now.

He TOOK the equipment without arresting anybody? That is where the problem lies. Enforcing the law is needed, but any official taking personal property in the USA without an arrest to go with it is simple abuse of power. If they really did something wrong, arrest them and take their property. If they did not ... Then leave them alone. Not following all of the rules leads to abuse and will make our justice system the laughing stock of the world! (Doh! I forgot, it already is!)

[snip]
: As for those who lost their CBs, they're going to have to go shopping

: plans to sell the seized equipment at auction.

Not untill he legally aquires it by arresting AND convicting them. This officer is more of a threat to the saftey and security of this nation than any foul mouthed jerk. I commend him for trying to uphold a law, but I condem him for abusing his power in the process.

From an AP story......

FAIRMONT (AP) - Hey good buddy. Clean up your language because Smokie knows your handle. The Marion County sherrif's department has seized $75,000 worth of citizens band radios from at least 14 foul-mouthed operators, some of whom allegedly solicited sex from truckers. One tractor-trailer driver made the mistake of directing some rough language towards Sherrif Ron Watkins.

"He was making obsene comments to me when I was in my squad car. He didn't think I was listening." Watkins said Monday."Now, I've got his mobile unit," he said.

Watkins said profanity and sexually explicit language had been a problem for the past two years. He dicided to clean up the airwave after receiving a complaint from a father whose son and his son's friends were studying to obtain a ham radio operator's liscense.

"Here, we have kids interested in getting into this and they have to listen to this bad, disgusting and degrading language," he said. "Even I felt uncomfortable with some of the language."

The equipment was seized after police recorded foul language and traced to radio users. No one has been arrested, but Watkins said he plans to file charges against some of the offenders. Watkins said he has the handles of about 24 people in the county who are known to use profanity while talking on their CBs.

"Some people might ask why I'm wasting my time with this," Watkins said. "But to me, this is the same thing as what's happened on the Internet ... You have people luring kids into situations that are undesirable."

Last year, the sheriff's department arrested the assistant principal of East Dale Elementary School for soliciting sex over the Internet. The educator lost his job in the state's first case involving criminal activity on the Internet.

As for those who lost their CBs, they're going to have to go shopping for more equipment if they want to go back on the air. Watkins said he plans to sell the seized equipment at auction.

Opinions anyone???

The proposed legislation about local enforcement of CB regulations in question has language that specifically exempts the Amateur Radio Service from the provisions of the bill. ARRL's Washington staff helped them rewrite this provision into the language to ensure that they did not throw out the baby with the washwater.

I'm not the original poster, but this story was printed, pretty much
as typed in this news group, in the Sept. 23, in the Morgantown WV
paper called the Dominion Post. It was a front-page story.

This is not a joke.

I found it disturbing that the article made no distinction between
amateur and CB radio.

And, by the way, if you must object to typos in what was a service to
this news group, the word Tim meant was "cite" not "site."

Unfortunately, that doesn't apply to the USA. There are no electromagnetic
susceptibility regulations here, though there should be. The FCC has refused
to enact any.

A whole-hearted "Go Get 'Em Sheriff!"
Maybe this is what's needed to clean up the airways! Obviously the FCC has turned a deaf ear to this CB band and the goings-on that are found there. Too bad the local smokies don't listen in on the ham bands to catch the same type of abuse.
Nice going!

Phil,
I agree. It is a good point and a valuable service.
I too have valuable radio and computer equipment to protect. Also been tracking this storm and it looks like it will prove to be a little more powerful than expected...

as for the other guy telling someone to go hide under their ham-shack table.... I think it was in poor taste. He did some of us a serives and Joe did a lot of us a DISSERVICE.

I used to believe strongly that the FCC should do so. I have changed my mind. The EU standards are for immunity of around 3 V/m. This translates roughly to 100 watts to a dipole at a distance of 40 feet. At 1000 watts, the distance between a dipole and susceptible equipment at the same height would need to be 73 feet.

The amount of protection offered by these regulations is minimal at best. OTOH, regulators don't usually stop by regulating one half of the equation. I would hate to see the regulators decide that if they have regulated 3V/m immunity on the consumer equipment, they need to regulate that amateurs not exceed that level in their neighbors' homes. Perhaps we are better off with "voluntary standards" in the US and no accompanying regulations on the field strength needed to ensure no EMI problems.

If I recall, there are at least a few countries that have such regulations. Any clarification from participants in other countries?

Pretty scarey, now that we have hick sheriffs -- a-la Jackie Gleason of "Smokey and the Bandit" fame -- acting as the arbitrars of first amendment rights in the US.

I wonder what the sheriff has in store next... Mass executions for people who speak out against him?

Modern equivalents for the above have different basing, although many
tester settings would be the similar. the modern equivalents are:

7A4 - 6J5GT is the octal equivalent
41 - 6K6GT is the octal equivalent, 7B5 is the loktal equivalent, 6AR5
is the 7 pin mini equivalent
7C6 - very similar to type 75
7B7 - 7A7 is similar
84 (a.k.a. 6Z4) - 6X5 is the octal equivalent, 6X4 is the 7 pin mini
equivalent, and 7Y4 is the loktal equivalent.

BTW, I sell tubes by mail order. Check out my website at:

http://www.cinternet.net/~vactubes

>Opinions anyone???

While the artile above smacks of fiction, I would support such action.
My vast experience with CB and CBers, leads me to believe, however, if
nationwide enforcement were to take place, fully 85% of CB operators in
the USA would find themselves without radios.

Immoral, unethical, and just plain illegal activity take place on the
citizen's band on a daily basis. Clean, legal operators find themselves
surrounded and attacked by the "Inbred Operator"(tm).

A couple buys cbs for themselves and children, not knowing what it is
like. The husband soon finds himself being told to "pump it up". The
wife is hit upon for dates by every other male CBer, the children are
also abused on the air, and also stalked by the child molesters on the air.

Hi Everybody!
My highschool seems to have developed an interest in the idea of
building an on-campus local FM radio station. So I, being a bit of a geek,
have decided to take it upon myself to attempt to compile all information
possible on the subject- what equipment is needed, what FCC liscences are
necessary, where we could possibly look for grants, etc. So, if anyone has
any useful and valid information on the subject, please reply. Thanks.
-Ian the Grate

PS Also, what is needed to pass the FCC tech test(age requirements, degrees)?

To post information/questions to the list:

TO: wallpaper@qth.net

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: k7on@qth.net

QTH.Net Digests and Archives (for subscribers)
k7on@qth.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
wallpaper and subscribe wallpaper-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe wallpaper-digest
unsubscribe wallpaper

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index wallpaper-digest

and get a list of files that are available by request.

Here is an example:

>>>> index wallpaper-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get wallpaper-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/wallpaper-digest.archive

Can either you or John Gastineau rent a clue here? I was pointing out
that this may not be a real news article based on the spelling errors
and the fact that a newspaper would probably not print it as written.
NOT the fact that the poster may have spelled words incorrectly.

Tim

Dear John,

Here's a good one that I just downloaded and tried. So far, I'm very
impressed - especially with the very educational tutorial that comes
with it. Far better than a help file.

The EMC regulation avoid/outlaw already your statement. No new
regulations are required to avoid radiation and susceptibility
problems.
ALL equipments sold in europe have the CE marking indicating
the equipment conforms to the EMC (Electro Magnetic Compatibility)
rules.

A couple of people in the newsgroup here, refer to the article in some magazine. But when I click on the URL, its comes up old news and it can not locate it. If someone should run across a copy of the proposed bill. Please post it here.
Now do you think, that the local police will know the difference between a legal and illegal equipment just by looking at. If its 5 watts or 200 or even 500 watts. Unless of course you hold a piece of paper in your hand that has been signed by the FCC or some radio shop stating that your radio is within operating standards. If they have a complaint they will follow through regardless. The way our local government is running these days. You do not have any rights. Just say "NO ! you can not have it! " and see where it gets you. In jail most likely. And all this,,, because some senator wants to propose some stupid bill. What was his name ..... Sen. Russel Feingold < something like that anyway. Next someone will ask >

>Is your CB radio BATF approved?

4708. Ham Log 3.1 Logging Software

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-24 00:00:00 UTC
From: rhg@sydney.dialix.com.au
Message-ID: <875079969.348317@fermi.dialix.com.au>
Source record: 189992

PRESS RELEASE - Re: HAM LOG 3.1 by Robin Gandevia VK2VN

Many users have advised me that the program Ham Log is so well written and easily understood, that quite often the manual is not used. This is because the program is so simple and intuitive to operate. Further, if a user has a query about some aspect of the program, the extensive context sensitive help available throughout the program (F1) is usually more than sufficient.

So we now have the new "Environmentally Friendly" version of Ham Log. This version includes a copy of the manual on disk so that it can be referred to if needed, and can of course be printed.

And the best news is that the environmentally friendly version will be more 30% less than the normal version. Furthermore, the package and post charges have been reduced to NIL for Australasia and just $2 for the rest of the world. This saving also will be appreciated by many from non English speaking countries.

At this stage, the demonstration version of Ham Log 3.1 - HL3DEMO.EXE (or the ZIP version HAM_LOG3.ZIP) have not been updated to include this advice.

Yours sincerely,

Robin Gandevia VK2VN

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 05:45 UT, 24 SEPTEMBER

/\

* NIL to Low Impact Possible *

http://solar.uleth.ca/solar

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 24 Sept)

Flare Size: Class M5.9/1B
Location: S31E19 (Region 8088)
Tenflare: 710 sfu at 24/0246 UTC, Duration: 2 minutes.
SESC Times: Begin=24/0243 UTC, Peak=24/0248 UTC, End=24/0305 UTC
(SESC Times are based on a half-power-point system)
Sweeps: Type IV observed at 24/0248 UTC.

SYNOPSIS:

A major class M5.9/1B tenflare was observed from Region 8088 (S31E19)
at 02:48 UTC on 24 September. This flare was impulsive and fairly brief in
duration. A Type IV sweep frequency event was reported with this event, but
a Type II has not yet been reported (it may have been obscured by the
Type IV).

The area of instability appears to be within the trailer spot complex
where mixing of opposite magnetic polarities is strongest. Growth and other
activity (filametary and subflaring) there has also increased over the last
six hours.

Preliminary observations indicate that a coronal mass ejection occurred
with this event. It is also likely that this CME was partially directed
toward the Earth - but there is some question as to whether this disturbance
was directed at the Earth enough to produce a geophysical impact. At the
current time, there is insufficient evidence other than to confirm that a
coronal mass ejection was observed. As a result, the impact assessment given
below may need to be corrected over the next 24 hours.

At the present time, it looks like any impact we do see will likely be
rather small and of relatively short duration (12 to 18 hours roughly),
although much of the evidence is still not in for analysis.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

The following tables depict the preliminary estimated potential for terrestrial impacts in various categories. These tables are valid only for the flare described and do not include assessments for previous influential flare events.

POTENTIAL MAGNITUDE OF DISTURBANCE

HIGH : 05 %
MODERATE : 25 %
LOW : 40 %
NONE : 30 %

OVERALL ARRIVAL PROBABILITY : 40 %

ESTIMATED WINDOW OF SHOCK ARRIVAL IF SHOCK ARRIVES

MINIMUM	EARLY	PREFERRED	LATE	MAXIMUM

<pleun.vermeulen@prive.ordina.nl> writes
>I'm am desperately looking for modifications on Kenwood TS 780 VHF/UHF all
>mode base rig!
>
>I want to:
>
>- Extend the RX range (want to be able to receive around 150 MHz)

NOT ADVISED - One of the advantages of the TS780 is that it was designed
to receive signals within the ham bands only. Extending the receive
coverage wiuld give you problems from break through of out of band
signals (pagers etc.)

>- Improve RX sensibility (is quite OK but if possible better RX would be
>nice)

Use an external mast head pre-amp.

>- Pump up the HF power if possible (is now 10 watt, I've heard that 3dB
>gain is possible)

Specification is 12 watts. 17 watts is possible but again not advised.
The difference is not going to be worth the risk of running out of spec.
If you must "have a go", remove the top cover and locate the TX board.
(second board from heatsink) VR1 adjusts the high power setting on 144
and VR2 adjusts the high power setting on UHF.

>- Setup the Signal meter properly (The needle's a bit heavy.. hi)

Setting up the signal meter properly involves a number of adjustments
and should not be tackled without a service manual. If you just want to
see a more active "S" meter the pre amp will do that for you.

>- Change the "low power" settings (should be 1 watt, is now 180 mW)

VR4 on the 430 final board (next to the heatsink) controls low power on
VHF. VR5 on the same board controls low power on UHF.

>- Built in CTCSS (To open "modern" repeaters)

Boards or kits should be available from most good dealers.
>
>The Kenwood TS 780 is a 80's VHF/UHF set, please be so kind to review your

>"old" docs and help a just started Dutch HAM friend out!
>
>Thanks in advance!
>
>Pleun (PD1ADI locator JO21WT)
>
Nice to see you want to "have a go" but don't rush in where others fear
to tread! You have an excellent base station and it is all too easy to
adjust the incorrect component if you don't have a service manual. Good
luck and look forward to working you soon.

Hi all,
I have decided to buy some HAM equipment (in Europe, of course).
I have american Harris RF-230, but its really old machine. So, I am
looking for some
used HF transceiver, (..because of money) and my idea is Kenwood TS-440

or something similar. I would like to hear (or read) any advices,
experiences,
coments and recommendations (or opposite) about machine like this.

Thank You & 73!

Yea, I have one or two. 1st did you re-type this from a newspaper? It's full of spelling errors, what newspaper did you read this in? Site the date please.

I'll bet my next paycheck AP never printed anything like this.

> The Marion County sherrif's department has seized
> $75,000 worth of citizens band radios from at least 14 foul-mouthed
> operators, some of whom allegedly solicited sex from truckers.

Hmmm, 14 operators, $75,000, so each radio was worth $5,300? har har

> Watkins said profanity and sexually explicit language had been a problem
> for the past two years.

Really, where has this sherrif been hiding? I listened to prostitutes solicit sex on CB over twenty years ago.

> The equipment was seized after police recorded foul language and traced
> to radio users.

Oh, the police are running 27Mhz doppler now? What a joke...

> KC8GGV
> David McKain

OK Dave, give it up. Whats the source of this poorly written joke?

Tim

>General. Thanks.
>
The bandwidth of a mobile 80 meter antenna (actually a VERY short
vertical) is extremely narrow. There is probably a set screw somewhere
that will allow you to lengthen and shorten the whip to adjust it to the
part of the band you're interested in.

Well, I knew this article would precipitate a lively discussion. I was disparaged that insinuations would be made about the character (hick) of law enforcement officers in my state would be made. Well, I wont send out the Sheriff to confiscate your equipment (hi hi).
Although I do agree with the Sheriffs actions in this case, I do understand that too much power in local governmental hands is dangerous. I hope that we can all agree to disagree but, through discussion (not argument), we can all try and understand these policies and their effect on Amateur Radio as well as personal freedoms in the US.

Why is it so difficult to identify persons communicating with radios1.
Recognizeable voice (legally shakey)
2. Mixed use of handles and names (a little better)
3. Location using triangulation (easily done if you know a few local hams

I know that, in certain cases equipment used in a criminal act can be confiscated. Although this can be taken to an extreme (try driving along I10 in LA with a nice can and out of state plates, your car can be impounded for suspicion and will cost you an arm and a leg to get out even if you can prove that you are not involved in the drug trade) I do believe that this case warranted confiscation. If you don't know what Im talking about, get a CB and come down below the Mason-Dixon line - you'll see what behavior inspired the sheriffs actions.

Dear B.S.,

Ain't it just AWFUL!! Sheriff done went and snarfed up their
radios. Ain't it just WONDERFUL!

Yea Sheriff! I love ya, man!

Maybe the Sheriff just needed some evidence, or a new
set of ears, or maybe whatever.......

Someone soliciting sex on the radio *ought* to have their
equipment confiscated awaiting disposition of their case.
(If you took time to read the original post, you would find
that charges were being considered.) Beware of the half
truth. You may have gotten hold of the wrong half.

> Amateur Radio Books for Sale, anywhere

I have a copy of the AARL Radio Amatures' Handbook, 1951 edition.

This is close to being the bible of vacuum tube circuit design, with good coverage of everything up to and including do-it-yourself microwave circuits. The book barely mentions semiconductors (copper oxide rectifiers and point-contact crystal diodes used for microwaves do get mentioned, but that's about it). The book is in great shape, and includes an appendix containing fairly long manufacturers' and distributors' advertisements -- Collins Radio (now they make Java chips!), Allied, Radio Shack, they're all there!

This is a nice big heavy paperback. Make me an offer!

glenq@NOSPAMcyberhighway.net (Glen Quarnstrom) writes:

>> Desserts are different, for alot of reasons. It is not just the cacti.

> I agree. A dessert with cacti would probably taste lousy.

I disagree. One of our cacti (opuntia robusta) had a bumper crop
of fruit this year and they are very tasty. Sliced and served
plain or with ice cream is good, as are slices in Jello. The
innermost portion, after straining the seeds, makes a very sweet and
tasty sauce. This sauce is good over ice cream and other desserts.

I don't know under which ordinance (probably soliciting
minors) the sheriff snarfed up their radio, but I'm glad
he did!

If it were up to me he could confiscate not only the radio, but
the whole damn 18-wheeler it was attached to! Soliciting sex
of children has nothing to do with FCC or "civil rights of CB'ers"
or any other such hand-wringing and crocodile-tear-ACLU
issues. I'm sure the sheriff of Stearns county would also
confiscate your radio or computer if you were using them to
solicit juveniles. (At least I *hope* he would!)

If, as you suggest in another post, he and the county get sued,
I will be happy to contribute funds for his defense. The guy is
a hero.

I wouldn't exactly call the old rigs the ultimate in quality, though some of the gear intended for the military did use top quality parts. Most of the stuff intended for the amateur market, however, suffered from serious corner cutting. And the circuit designs, sigh, they were so limited by the number of active devices they could include that the designs were always seriously compromised (and that includes prestige makes like Collins).

You can still call up the manufacturer and talk to the designer(s). But it may be an international call, and it helps if you speak Japanese. (Don't bother calling the US reps with technical questions, they're just sales droids.). I've had occasion to consult the Japanese manufacturers about various equipments, both professional and amateur equipment. I've found them to be uniformly friendly and helpful if you can overcome the language barrier. I have an in there. One of our staff speaks fluent Japanese, and can act as translator. I've even had them return my calls, on their nickel. Like design engineers anywhere, they just love to talk shop.

>Opinions anyone???

If the reporter got the story straight (always a consideration), this sheriff
should spend an extended stay in a federal correctional facility. Seizure
of (legally owned) private property without due process is such an egregous
violation of the public trust that it is prohibited by the Fourth Amendment
of the Constitution.

Some police agencies understand this. Another recent story which moved
over the wires is about a police officer who seized (and ate) a McDonalds
hamburger from the car of an accident victim. He was seen doing this,
and was quite properly fired from the department. That was a petty
crime, but if the figures in this story are true, what this sheriff is doing
is larceny on a grand scale.

Now police are empowered to seize contraband, but ordinary radio
equipment is (not yet) contraband in this country. Police can also seize
and hold material evidence of a crime, but they can't keep it or sell it
unless the crime is proved in a court of law (unconstitutional war against

some drugs laws not withstanding).

Police are *supposed* to understand the law, and are *supposed* to obey it. They take an oath to protect the lives and *property* of the citizens they serve. In fact, however, there are many like this sheriff who arrogate to themselves powers which they are not entitled to wield, or who ignore the law when it suits their purposes.

When police violate the very laws they are charged to enforce, they become no different from any other criminal with the important exception that they hide their crimes behind the color of their office. This is perhaps the gravest threat our Republic faces. We can deal with the other threats facing us, but when the government police power sets itself above the law, we are in grave peril.

I'm not really shocked that police behave this way, after many years of close observation, I find many of them very little different than the criminals with which they deal, though they hide that similarity behind a facade of moral superiority. But I am somewhat shocked that people aren't outraged by this behavior. It cuts to the very roots of our principles of government.

You need to clarify this a bit.
Alcohol Prohibition began by statute in 1918 (World War I) and was
ratified as a Constitutional Amendment in 1919. The Great Depression
began 11 years later in 1929 as an ordinary recession. It got
progressively worse through President Hoover's term, however, due to a
deflationist Federal Reserve, balanced-budget tax increases, and
Smoot-Hawley protectionism. Prohibitionists had (falsely) claimed
credit for the boom of the "Roaring 20s," so few felt any qualms about
(falsely) blaming them for the Depression.
Alcohol Prohibition was repealed in 1933-34, coinciding with the
start of a wobbly 7-year-long recovery under FDR. Few scholars credit
Repeal with the recovery, however; decisive factors were FDR's gradual
acceptance of fiscal Keynesianism (budget deficits in time of
recession), and the military spending boom of World War II.

One may buy a CB at any number of a hundred flea markets. They'll be back
on the air in notime. The REAL reason the confiscated them is because they
were using the radios to solicit for prostitution at the truckstops. If
there was
not this kind of activity going on they'd still be on the air. The CB
confiscation
was only a very small part of the story, resulting from a much larger
investigation.
So do not believe that this action precludes any new type of enforcement
activity by the FCC or others, unless it's connected directly with some
kind of an
ongoing felony, then a whole different set of actions come into play. For
example
if Joe is on his boat in the Bahamas making phone patch calls to Miami via
ham
radio to save a few dollars over MCI, it's no problem, he can do it till
doomsday and nothing will happen, period. If Joe was using the same to
arrange for the shipment
of contraband goods, then that's an entirely different story altogether.
Have a coffee
and relax ham radio op's.

The last I knew (granted, laws in Hickville USA are a bit lax in these areas)
it was illegal to molest children. That's a far cry from getting on the radio
and screaming "F-U!" at everyone, which, also the last I knew, was not
illegal on CB.

>Why is it so difficult to identify persons communicating with radios1.
>Recognizeable voice (legally shakey)

You really think the local sheriff can even think of doing that?
It isn't shakey, the local police/sheriff don't have a clue.

>2. Mixed use of handles and names (a little better)

This assumes one is telling the truth on the air. If I say my
name is Bob, how do you or anyone else know?

>3. Location using triangulation (easily done if you know a few local hams

The sheriff doesn't have a clue on this.

>I know that, in certain cases equipment used in a criminal act can be confiscated.

Fine, if the pursn is charged with a criminal act...not th case
at all from this story.

>Although this can be taken to an extreme (try driving along I10 in LA with a nice
>can and out of state plates, your car can be impounded for suspicion and will cost
>you an arm and a leg to get out even if you can prove that you are not involved in
>the drug trade) I do believe that this case warranted confiscation.

Based on what FACTUAL information. Fact that can be PROVEN,
not surmised or probable.

> If you don't
>know what Im talking about, get a CB and come down below the Mason-Dixon line -
>you'll see what behavior inspired the sheriffs actions.

That is irrelavent to the story and actual confiscation. If
I buy your argument, you'd probably support the sheriff
confiscating all CBs in the area without having to prove
anything. Welcome to the fatherland.

I'll repeat again...
>> This is truly a sad commentary on law enforcement.
>> Confiscation of equipment on no legal basis at all.
>> Please Mr. K0COY, tell us all what law warrants the
>> confiscation of the CB rigs by a non-federal law
>> enforcmement person without any concurrent charges be filed
>> against the owner(s) of the equipment.

Not one shred of information has been put forth by
K0COY to support any confiscation.

<excellent rant left unedited>

Good post, Gary. The forces of fascism have already stolen many of
our rights, and we seem all to eager to give up still more of them.
Most have heard of the excesses of the Drug Warriors, and Congress is
now hearing horror stories of abuse of power by the IRS.

If this story is even close to being factual, that Sheriff was WAY out
of line in several areas.

Actually the Supreme Court has empowered local law enforcement with the right to confiscate private property if it used in conjunction in a crime. The solicitation for prostitution is considered a crime and therefore the WVa police were entitled to confiscate and auction off the equipment.

Check the news papers, you'll read about cars being confiscated, money being confiscated, homes, planes, boats.

You people should read before you react.

One problem with vacuum tube HF ham receivers was the noise figure mania. Hams thought that if an HF receiver didn't have a 5 dB noise figure it was not very good and would not buy it. As a result, strong signal performance suffered because of vac tube limitations. Special tubes like the 7360 beam deflection tube (Squires-Sanders SS-1) showed up just as the transistor age began to take over, but by then it was too late.

The Asset Forfeiture Laws enacted in the early seventies circumvent
the Fourth Amendment. These laws came into being about the time the
RICO statutes were created.

It is quite possible that the seizure of the CB equipment was
'lawful'. Unfortunately some law enforcement authorities are, shall we
say, over-zealous and abuse their powers including the Asset
Forfeiture Laws.For more information on this subject a good place to
start is:

That suggests CBrs are running some kind of stations. If the numbers are even close, 14 stations and 75000.00 = over 5300.00 per. Name me a ham that wouldn't like that figure to spend.

All that aside and I hope they ea lost the 5000.00, I say good on the Sheriff and when can we expect some enforcment on both sides of 27. mhz. BTW, there are many good people on 27mhz, some from the HAM bands, just as there are bad ones. The good ones know you have problems on the ham bands and see no reason to leave a bad situation just to be examined for joining a bad situation. These just want to be left alone to enjoy their little group of people they talk to every day. Some do it long range, and some violate the power restrictions, but many have long range friends and never alter the power of their rigs except maybe deminishing it some in trying to extend the tuning range. And I can tell you there have been some who have found a way to just hide where they are, just to be left alone. Yes they were still on 27mhz, just hidden.

I live in the eastern panhandle. "Hick" about sums it up, at the local and state level.

I'm not exactly thrilled with law enforcement that claims the right to tresspass and search anything that isn't secured with a door, no warrant needed.

Dear friends,
I have problem with Alinco DR-130 VHF mobile.I could not exit
from its Channel mode.I look in modifications archive on net and I
found that I must hold VFO/M key and press on button but nothing
happens.When I try to reset station it stays the same,it locks on
Channel mode.Tranceiver is not locked,all keys works(I check).
Because it have been before in proffesional use iis it possible to
somehow lock VFO mode.On PCB I foynd two cut wires (blue and red)
I try all resets with combination with wires soldered or nor but
nothing happens.I noticed 24L02 EEprom inside.Is there some global
reset for DR-130 or other way
Thank You for help
Sacha

I started this when I replied about missing K-town. We need to get all the folks on the net who were in the K-town area and email each other.

BTW, Sembach does not have aircraft working out of it. It is used as a secondary site. Some of the old hangers are being used as commercial go cart racing. It is great fun!! (So much easier to have recreational activities when the lawyers are kept at bay.)

4761. HAM Auto Registration Help Needed

From: Randy or Vanessa Carlson <bugnbox@earthlink.net>
Message-ID: <342AF386.4BD7@earthlink.net>
Source record: 189846

Hi there!
I have an odd question but I am hoping you might be able to help or know of someone who can.
My father was a HAM operator for many many years K6RLN. He had the personalized HAM plates on his favorite car (since 1963), a little red Porsche.
He passed away a few years back and my mother knowing my love of that car gave it to me as a gift.(Lucky guy here!)
I want to register the car in my name but retain the HAM plates that have been on it since the car was new. There is some definate sentimental reasoning going on here. I was told by the DMV that in order to register the car with those plates that I must provide a HAM license with my name on it and such. I obviosly do not have this so I am wondering what I can do. If you have any ideas, please let me know.

Thanks very much for your assistance!
Randy Carlson

>Care to re-do your sig to bring it in-line with your obvious disdain for
>the sheriff's operating the same way.

The sheriff can hold any opinion he damn well pleases, but he can't
act on those opinions except in accordance with the law. That's
the salient fact here. If I "seized" your radio and sold it at auction,
you could rightly have me arrested for theft. The star the sheriff
wears doesn't elevate him above the law. If he seizes and sells your
radio without a court of law finding you guilty of some crime associated
with that equipment, and ruling that you must forfeit that equipment as
punishment, he is a thief. That he is a thief under color of office makes
the offense worse. Citizens have given him a special trust, and he
has violated that trust.

No more than you or I, police are not above the law. As guardians of
the law, they have a special responsibiltity above and beyond that of an
ordinary citizen to obey every nicety of the law while carrying out their
duties. They are never justified in breaking the law. The end does not
justify the means. How can we trust a government whose agents break
the very laws they are charged to enforce?

This goes *way* beyond some foul mouthed CBers. This cuts to the
heart of government. If we can't trust our government's agents to obey
the laws they enforce upon *us*, then they are no better than a gang
of armed thugs, and should be treated as such.

What I find shocking is that so few people are *outraged* by the
criminal behavior of their government officials. And that criminal

behavior is *rampant* in government today, from the very top on down to the badge wearing thieves and assassins prowling our streets.

Frankly, I am much more disturbed by gangs of goons wearing jackets with three letter acronyms on the back crashing into people's homes or assassinating a mother holding her child in the doorway of her home than I am of some guys in camos playing soldier in the woods. And that's because the former are theoretically working for *me*, are being paid by *me*, and are acting in *my name*. Thus I bear a responsibility for their actions which I do not bear for some loons in camos.

Prohibition in any form does not work. The Great Experiment (Prohibition) was started by my side, the religious right. It left us with the BATF, FBI and all the other Federal agencies the right is scared of. When Prohibiton ended, it took so much money out of the economy that many believe that it cause the stock market crash and the Depression.

Now we are trying to ban guns and scanners (HR 2369, HR 1964). It will not work. Pro abortion folks say that if abortion is prohibited, there will be back alley abortions. I am telling if we prohibit guns, there will be back yard gunsmiths. If scanners are banned, DSP will create re-configurable receivers that anyone could set up. Once a technology is in existance, it never goes away.

Our biggest problem is that technology is out racing ethics. Given that America does not currently have have an ethical system (the American Puritian Ethic died in 1968 along the Industrial Age), we have many individuals who very resistant to any standard by which individuals might be judged. Getting all Americans on the same sheet of music would help.

I like the German system. They regulate everything. But gun regulation is guided by gun owners especially the BDMP (Union of Police and Military Shooters). Every hobby has a great deal of input into regulation. What would happen if the NRA (gun owners), AKC (dogs), ARRL (radio operators) would help set regulations that help us get the assholes out of our hobbies while silencing the prohibitionist of our society (animal rights activists, environmentalists, big business - ie Motorola, HCI). I think the practitioners of any hobby have the best interest of their hobby and most want the jerks reined in.

Prohibition does not work because the elites also want to the exception to the rule. Anti-gun fanatics want guns for themselves, just out of the hands of rednecks and black kids. Ban scanners but let the government listen to your phone calls. Remove everyone from the land except the high priests of the environment. Everyone wants to be in the Aristocracy.

Have for sale: 17ea CSI (Connect Systems Inc.) Micro Patch, Model
9800D
Multi-Mode Interconnects.
These units were used for a 45 day period in Alaska,1994. They have
been in storage the rest of time. The units look as new, and include the
optional 9801 Electronic Voice Delay. I also have "Users Instruction
Manual" These units are current models, and Ham Radio Outlet sells
the 9800 for: $749.00, and the optional 9801 for:
$139.00.
For complete information and specifications, please see:

http://connectsystems.com/cs9800d.htm

I am willing to "swap" these for: Ham equipment. Or Sell for $350.00 ea.
Please contact me via-email jeepham@ix.netcom.com
Thank You, and 73 Darrell N6ZKV

Source record: 189858

g wrote:
>
> Looking for any info on GMRS - who's on, how to get on repeaters, etc. Any
> help appreciated.

The FCC has a pretty good description of GMRS on its website:

http://www.fcc.gov/wtb/perrdsrv.html

The actual law is on this site:

http://www.securbar.com/part95.htm

Several equipment vendors have their GMRS offerings on-line, Maxon is
one:

http://www.gmrs.com/index.html

To find local repeaters takes a little work. As far as I can tell there
is no central repository of repeaters. If you have a knowledgeable GMRS
dealer in your area they may be able to point you to a repeater operator
who is willing to share a repeater. If you have a scanner you can scan
the narrow range of frequencies on which repeaters are allowed to
operate and possibly get ahold of a repeater operator in that way.

Good luck.

Jim Swenson

4774. Interference in 440 band from Mobil Speedpass pumps?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-25 00:00:00 UTC
From: Bill Sommerfeld <sommerfeld@orchard.east-arlington.ma.us>
Message-ID: <jo90wlnebt.fsf@orchard.east-arlington.ma.us>
Source record: 189859

For those of you not familiar with it, the Speedpass is this little keychain dongle you place up against a "target" on the gas pump at many Mobil stations; the pump reads a serial number out of the widget and bills your purchase to your credit card. It's supposedly faster than using a credit card directly, but I haven't bothered to sign up for one yet..

Anyhow, since these units started being installed at Mobil stations in the area, I've noticed a significant signal on the frequency of a local repeater (449.725MHz) when in or near Mobil stations. When I first ran into this, I thought it was someone accidentally sitting on their PTT button, but I later realized (after asking on the repeater if anyone else heard it) it was a more localized phenomenon..

Three different radios (Yaesu FT8100, Yaesu VX1R, and Alinco DJ580) are all observing the same signal; it's strongest right next to the pumps (naturally) but is significant just about anywhere within the paved area of a station, and sometimes extends to across the street from the station.

The interference seems to range from around 449.720 to 449.750, and is strongest at around 449.735..449.740 or so (the FT8100 shows it at about S9-S10 when I'm parked near the pump); different pumps seem to have peaks at different places..

Of course the practical answer to this is "buy the CTCSS decode unit and turn on tone squelch" but the interference seems to be an order of magnitude stronger than other interference I've run into in the past.. One wonders what the nominal operating frequencies of the units are, and why they need to be emitting that much power -- on a ham band frequency, no less -- to read something held a couple inches away from the pump.

I haven't yet determined if a pump will deliver free gas when you give it a 35W "response" .. :-)

Anyone else noticed anything like this?

- Bill, N1FHN

:You can still call up the manufacturer and talk to the designer(s). But
:it may be an international call, and it helps if you speak Japanese.
:(Don't bother calling the US reps with technical questions, they're just
:sales droids.). I've had occasion to consult the Japanese manufacturers
:about various equipments, both professional and amateur equipment.
:I've found them to be uniformly friendly and helpful if you can overcome
:the language barrier. I have an in there. One of our staff speaks fluent
:Japanese, and can act as translator. I've even had them return my
:calls, on their nickel. Like design engineers anywhere, they just love
:to talk shop.
:
:Gary

Gary, your experience has been much different than mine.

(repeated from another NG)

I was seriously thinking of buying an ICOM 775. I asked the sales person if I could look at the schematic. I've never seen a schematic that looked like that. It was obvious that they were trying to keep the consumer from figuring out how the rig worked. Obviously, the designers were embarrassed with the design. Any designer worth his salt will go to great lengths to make it readable, so that the design inovations were more apparent. Not in this rig. Garbage, pure and simple.

Now, even though the US manufacturers cut corners, etc in those old rigs, the new Japanese rigs still pale in comparison. After all, there is no rec.radio.amateur.japanese newsgroup, now is there??

(balance snipped)

Agree completely that prohibition doesn't work. As far as the end of Prohibition causing the Depression, someone needs to read some more US history. Most people believe that the Depression began when the market crashed in 1929 - the US was in a full bore depression by 1932, it cost Hoover his chance or reelection.

Prohibition was repealed by the Volstead Act of 1933.

This is truly a sad commentary on law enforcement.
Confiscation of equipment on no legal basis at all.

Please Mr. K0COY, tell us all what law warrants the confiscation of the CB rigs by a non-federal law enforcmement person without any concurrent charges be filed against the owner(s) of the equipment.

4778. What the mayor of SF thinks of us...

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-25 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <60cpbq$43c@news.Hawaii.Edu>
Source record: 189939

From the acs newsletter...
Jeff KH2PZ

EMC098 ACS & the Mayor of SF For release 9/22/98

CITY & COUNTY OF SAN FRANCISCO
DISASTER COUNCIL MEETING
April 22, 1997

Remarks by Willie Brown, Mayor:

"...I must also tell you that I have been frankly fascinated with that unpaid group of people with those ham radios, the Auxiliary Communications Service. Now they are maybe the most active of all the volunteers. They are virtually over at the office every time I go over there. And I suspect that they hang out there. Now they're an interested group of people.

"It is a communication system though, that I think now covers practically every community in San Francisco, and in some cases damn near every block in San Francisco, for emergency communication purposes, which means that a wireless system that seldom if ever can be totally disrupted by a disaster is within our grasp, and we are able to use.

"Obviously the cell phones play a role in that now, but the ham radio operators are the heart and the soul and the life blood of that system. And so we do have a system that is virtually communications disruptive proof in terms of being able to do the communications that we may need to do.

"There is also, I think, a level of training enjoyed by these people to carry out their task, and some method to identify them visibly in case of a disaster when they go into their operations mode."

The above was submitted to the ACS Newsletter by Peter Dunckel, from the City & County of San Francisco OES ACS.

The ACS newsletter is sent to those who indicate an interest in emergency communications by the way they respond to the ACS Web page (see below.)

In the issue in which the above was published, the following also appeared:

"One of the biggest concerns we have is the ability for the government to recognize the efforts of the local volunteer community BEFORE the emergency takes place. I think it's pretty safe to say that the San Francisco ACS IS recognized. Our compliments to San Francisco for a job well done!

--Dave Larton, State ACS Training Officer (larton@garlic.com)
Auxiliary Communications Service
Information Technology Branch
Governor's Office of Emergency Services"

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

The California QSO Party will be held Oct 4-5.
Detailed information and rules can be found at www.contesting.com/cqp

With all this talk about how ham radio is not dead, Here is your chance
to get on the bands and see just how alive we are.

See if you can work all 58 California counties. They will all be active !
If you are in CA, get on and help those who are looking for your county.
See if you can find all 58 US states + Canadian provences. It can be done.

Send your logs to: AD6E@aol.com no log is too small.

73, Al AD6E

I'm afraid Gary you do have susceptibility regulations in the US.
I have seen them mentioned several times in the EMC-PSTC maillist
and sci.engr.electrical.compliance newsgroup as comparision to
the european regulations.
They are known under a IEC number X but I do not recal dirrectly
that number.

How can a police officer confiscate property without a warrant..?? Since there has been no law passed that gives any authority to local law enforcement to do ANYTHING regarding matters that are the FCC's responsibility. There are two bills in congress (hr 2383 & s 608) that address this matter, and to my knowledge haven't been acted on, much less signed by pres Clinton. I do hope he (the sherriff in WV) gets his butt sued for violating the civil rights of those CB'ers who lost their gear. Even if you agree with what he did, YOUR rights get violated as well. I seems like anything the govt decides to get involved with gets messed up. There is a provision in the bill(s) which exempt FCC licence holders from local action, so your amateur licence and equipment will not be subject to the discretion of "local yokel CB vigalanties".....

I see no reason that local law enforcement could make an arrest on Federal charges that would be submitted the US Attorney's office for prosecution. We do for drugs, illegal aliens. And often state mirrors Federal law so that you can be charged at both levels.

BTW, in most states the Sheriff is the only elected LEO. In Indiana the only person who can arrest the county's sheriff is the county coroner. Very powerful, usally term limited because of that.

Don,

A search of the web resulted in one lead that will at least
tell you the creator's name, as provided by Wayne Green
himself to this page's author:

http://www.instanet.com/~scratchi/ham99.html

Using numerous search engines, little else was found. I guess
you'll have to research the old fashioned way ... via the
public library.

Good luck ...

Groucho

With the exception of soliciting/prostitution, what business is it of the
Sheriff to decide what is "bad, disgusting, and degrading language"? Does
the sheriff go around arresting people who mutter to themselves "FUCK! FUCK!"
all day, or two adults having a conversation laced with profanity?

What other civil liberties can we expect the sheriff to appoint himself
arbitrar of next? Whether or not you get a trial, or just hung out in
some apple orchard?

I was wondering how many folks here remember that column. No, it
wouldn't be politically correct these days -- if you squint real hard
and make a point of avoiding what would be called 'appallingly racially
derogatory stereotypes' it might be sort of humorous, but Hon. columnist
would not be welcome in today's magazines ...

>know what is happening.

Without getting into the Constitutionality of all this, I'll just say
that the original article didn't mention any arrests or "due process"
at all. Gary's post specifically mentioned "due process." From all
appearances, this sheriff just grabbed the CBs because of some
personal crusade, and didn't arrest or charge the truckers at all.
This is totalitarianism, pure and simple, and anyone who supports it
can expect to have his own property seized at any time. Few LEOs have
any clue about the difference between Ham and CB. So next time the
sheriff hears some cussing on Channel 19, and notices your two-meter
antenna, he's likely to grab your radio, too.

Howdy Y'all!

I'm editor of "The Paper Repeater" Newsletter of the Alcatel Amateur Radio Association. In my continuing effort to improve and add to the rag, I've searched the WWWeb and scoured the newsgroups for ideas, images, and articles. The information is there, but it sure takes a lot of time to find! What I would like to see is "rec.radio.amateur.newsletters" amongst the titles herein ... but there ain't no such animal.

Now, to the point ...

How do we get Amateur Radio Newsletter Editors together!?

I'd like to exchange ideas, articles, discoveries, tips, and much more with others of my ilk, but I haven't *found* others!

If any of you know of Newsletter Editor's Web Pages, please post same (but NOT just a bunch of HamLinks - I have literally *thousands* of them now and they're not Newsletter oriented).

Ideas, suggestions, help, and whathaveyou are most welcome.

---

NASA GIVES KC5VPF THE GREEN LIGHT FOR MIR STAY

It was uncertain right up until launch day whether US astronaut David Wolf, KC5VPF, would get to replace his colleague Mike Foale, KB5UAC, aboard the Russian Mir space station. Under intense political pressure to consider discontinuing the presence of US astronauts aboard the ailing and aging space station, NASA Administrator Dan Goldin gave the okay Thursday, September 25, for Wolf's Mir stay only hours before the shuttle Atlantis was launched from Cape Canaveral on mission STS-86 and a rendezvous with Mir. At least for another four months, Wolf will continue the permanent US presence on the station that began in 1996 with Shannon Lucid.

Goldin cited separate scientific reviews of the situation aboard Mir in his decision to deliver Wolf to Mir as originally planned. An independent task force, chaired by Lt Gen Thomas P. Stafford, USAF (Ret.), a former Gemini and Apollo astronaut, reaffirmed NASA's internal reviews to proceed with Thursday's shuttle mission to replace Foale with Wolf on Mir. Astronaut Col Fred Gregory, USAF (Ret.), Associate Administrator of the Office of Safety

and Mission Assurance, conducted another NASA review. In that review, Gregory gave his certification of the shuttle-Mir flight safety as one of the key NASA management approvals prior to a shuttle mission.

"This careful and thorough review of the shuttle-Mir mission analyzed risk, readiness and, foremost, safety," Goldin said. "We move forward not only because it is safe, but for the important scientific and human experience we can gain only from Mir." Goldin said that as NASA looks toward next June's launch of the first element of the International Space Station, "nothing can beat the hands-on, real-time training aboard Mir."

Early this year, a fire broke out aboard Mir. The spacecraft also has had various mechanical problems, including malfunctions of its oxygen-generating and carbon dioxide scrubbing systems. In late June, a collision with an unmanned Progress supply rocket during a docking maneuver damaged the spacecraft's Spektr module and disrupted scientific research. Among subsequent problems, Mir suffered from repeated computer system failures, one as recently as this week. The Atlantis carried a new computer to Mir.

Wolf, 41, is both an electrical engineer and a medical doctor. A native of Indianapolis, Wolf is single. He has been an astronaut since 1990 and served as a mission specialist aboard the shuttle Columbia in late 1993.

Meanwhile, astronaut Andy Thomas, who is scheduled to replace Wolf aboard Mir in January, has successfully passed his Technician examination in anticipation of spending several months aboard the Russian space station. He received his new call sign, KD5CHF, this week and already has come up with the phonetics "Cosmonauts having fun." Thomas will take the place of Wendy Lawrence, KC5KII, in the Mir rotation. Lawrence originally was supposed to replace Foale on the current shuttle mission. In the wake of this year's problems aboard the space station, however, NASA determined it would prefer to have an astronaut aboard Mir who could fit the Russian space suits--in case an astronaut needed to participate in a space walk as Foale had to do during his Mir stay. Lawrence is too small to wear the Russian space gear, and that same thinking could have been behind swapping Thomas for Lawrence on the subsequent Mir posting.

Lawrence is aboard the STS-86 shuttle Atlantis mission that will deliver Wolf to Mir and return Foale to Earth from his four-month stay aboard the space outpost. The Atlantis crew includes Commander Jim Wetherbee; Pilot Mike Bloomfield; and Mission Specialists Scott Parazynski, KC5RSY; Jean-Loup Chretien; and Vladimir Titov, KD5AOS, in addition to Wolf and Lawrence.

Thomas, a native of Australia, is 45 and single. An astronaut since 1993, he holds a PhD in mechanical engineering and flew his first flight in space on Endeavour in May, 1996.--thanks to NASA

HAM RADIO NOW AN "OFFICIAL" ISS PAYLOAD

Amateur Radio is now considered to be an official payload on the International Space Station (ISS). In fact, reports Matt Bordelon, KC5BTL, at Johnson Space Center, ham radio was the first payload to become official. Bordelon already has started the training program for the first crew who

will be putting together the ISS starting in January 1999.

Based on our initial request to be manifested onboard, the ISS Payloads Office is listing Amateur Radio as being onboard with (1) a transportable station (H-Ts), (2) a site on the EXPRESS pallet, and (3) a permanent station on the Habitation Module. Amateur Radio soon will be assigned a Payload Integration Manager (PIM) for each of these.

ATTORNEYS AND PROFESSIONAL ENGINEERS: THE ARRL WANTS YOU!

One important service the ARRL provides to amateurs with antenna restrictions is referral to attorneys or professional engineers in their areas. Because they are hams, these attorneys and engineers are aware of our particular concerns. These professionals are members of the ARRL's Volunteer Counsel and Volunteer Consulting Engineer programs. They provide valuable assistance to hams who have to fight City Hall in order to pursue their interests.

Not long ago we put a call for attorneys and professional engineers to join both programs. The response was gratifying, but the need has become even greater. That's why we're asking again.

The Volunteer Counsel Program has several goals. It was developed to provide a better means of tracking and, when necessary, opposing local ordinances and statutes that might have a detrimental effect on the Amateur Radio Service and League members.

The second goal is to compile and maintain an up-to-date list of attorneys capable of representing amateurs involved in antenna or RFI disputes. Amateurs who need the services of an attorney in their area to deal with local opposition to their radio activities frequently call Headquarters. Because attorneys must be admitted to the state bar in order to practice law in a given state, we need Volunteer Counsels in each state. Unfortunately, the following states and territories are not currently represented in the VC program: Delaware, Mississippi, Oregon, Puerto Rico, and South Dakota. Amateurs who are attorneys in these states are especially needed.

The League does not expect a Volunteer Counsel to represent an amateur free of charge. When Headquarters makes referrals, we emphasize that VCs make their living practicing law and amateurs should not expect free or reduced-cost legal representation. Volunteer Counsels are asked, however, to provide an initial consultation gratis, so that the amateur may knowledgeably decide what further steps to take.

The Volunteer Consulting Engineer Program provides assistance to amateurs who may need to meet structural requirements set forth by local zoning authorities. Such engineering requirements are often necessary to obtain a permit to erect an antenna support structure. Hams often need an "expert witness" to certify that the tower in question meets or will meet the engineering requirements of local ordinances. Amateurs who need assistance are referred to Volunteer Consulting Engineers in their area.

As with Volunteer Counsels, VCEs are not expected to provide their services for free. We only ask them to provide an initial consultation gratis, and to consider giving discounted rates to amateurs where possible to meet a common goal for the good of Amateur Radio in the community.

VCs and VCEs must be full ARRL members and licensed amateurs. VCs must be admitted to the bar in the state for which they are listed, and VCEs must be Registered Professional (structural, civil or mechanical) Engineers.

If you are interested in becoming involved in either program, please contact the Regulatory Information Branch at ARRL Headquarters. We can be reached by phone at 860-594-0323, or by e-mail to reginfo@arrl.org. If you have access to the Web, you can apply on-line for either program by accessing the ARRL web page at: http://www.arrl.org/field/regulations/local/vc-vce.html.--Tom Hogerty, KC1J, Supervisor, Regulatory Information Branch

MORE ON NEW FORM 159

ARRL/VEC Manager Bart Jahnke, W9JJ, offers some additional advice on how to file a vanity call sign application, Form 619V, using the newly revised Form 159, Remittance Advice (dated July 1997). Form 159 must accompany all vanity call sign applications, no matter the method of payment.

On Form 159, Item 1, enter the post office box (POB) number that you'll be sending your payment to. If you're filing a paper Form 610V and sending it through the mail with your payment, Item 1 should read 358924. If you're filing electronically and mailing a payment for your electronically filed Form 610V, Item 1 should read 358994.

When using a paper Form 610V and filing by mail, you must include a Form 159 plus a copy of your current Amateur Radio license. The address is FCC, Amateur Vanity, POB 358924, Pittsburgh PA 15251-5924 (so, Item 1 on Form 159 in this case would be 358924, the same as the box number).

To apply electronically and sending Form 159 for your payment by mail, the address is FCC, Amateur Vanity, POB 358994, Pittsburgh PA 15251-5994 (so, Item 1 on Form 159 in this case would be 358994, the same as the box number).

Item 19A should be the applicant's present call sign.

NEW USES FOR THE OLD CODE: MORSE 2000 WORLD CONFERENCE SET

Morse 2000 Worldwide Outreach is giving Morse code a new lease on life to help rehabilitate and educate people with special needs and disabilities. The first Morse 2000 World Conference is now set for late October in Minnesota.

Because it can be sent using a binary-opposition movement pattern, Morse code can be generated with left-right, push-pull and puff-sip control. The code--used in communication for the past 150 years and being phased out in many spheres--has proven to be among the best of several adaptive computer-access methods and augmentative or alternative communication techniques for many people with special needs. The ARRL Foundation has supported the program through grants.

"We now have over 2,000 participants in 27 countries!" exclaims Debra R. King, N9GLG, the director of Morse 2000 Worldwide Outreach. King manages the Office of Continuing Education in Human Sciences and Services at the University of Wisconsin--Eau Claire, and enthusiastically promotes the use of Morse code in rehabilitation and education.

Through her encouragement, various Morse code programs are being used or tested to allow people such as those with spinal cord injuries to converse. She provides information for occupational therapists or speech pathologists and promotes the advantages of using Morse code to help their patients. Occasionally, though, it works the other way around: sometimes patients hear about Morse 2000 and put their therapists in touch with King! The bottom line, however, is that the information she provides can save the therapist-patient team years of research attempting to find the best methods and selecting reliable equipment.

Results have generated heart-warming success stories, especially at learning centers and children's hospitals around the world, as reported in MORSEls, the Morse 2000 newsletter. One researcher told of the case of a woman with ALS (commonly called Lou Gehrig's Disease) who had lost her ability to speak but was able to communicate using Morse code--at first by blinking her eyes and later by using an optical switch activated by jaw movement that was wired to a PC. The same researcher told of a stroke patient who employed his very limited movement to send Morse code messages to his wife. Another report tells of a stroke victim who is able to talk in Morse code by activating a chin switch.

Speech pathologist Thomas King, WF9I--Debra King's husband and the editor of MORSEls--called Morse code "one tool of many" in providing "adaptive access" for those unable to communicate through conventional means. He told of a young man he called Barry who had been severely injured and rendered a quadriplegic after being hit by a car as a youngster. He retained facial movement and can speak (although he's on a ventilator), but he can use Morse via a puff-and-sip switch to write 20 WPM or so. Now in the high school, Barry hopes to eventually attend college. "The use of Morse for taking notes without calling a lot of attention to yourself has worked out very well," Thomas King said.

The first Morse 2000 World Conference will be held October 25-26, 1997, in Bloomington, Minnesota. Featured speaker is rehabilitation engineer Kevin Caves of the Rancho Rehabilitation Engineering Program in California. Although the conference is aimed at clinicians, teachers, therapists, assistive technology users, researchers and product developers, Amateur Radio operators also are encouraged to attend and share their technical knowledge, and to help develop equipment and code skills to train others. Registration prior to October 1 is $98.

For more information on the conference or on Morse 2000, contact Debra King, Morse 2000 Worldwide Outreach, Human Sciences & Services Outreach Office, University of Wisconsin-Eau Claire, Eau Claire, WI 54702-4004; tel 715-836-3990; e-mail kingdr@uwec.edu. Morse 2000 can also be found on the World Wide Web at http://www.uwec.edu/Academic/Outreach/Morse2000/morse2000.html.--thanks to

Richard Regent, K9GDF

SOLAR UPDATE: ACTIVITY DOWN

Solar prophet Tad Cook, K7VVV, in Seattle, Washington, reports: Solar activity was down, but still quite good this past week after the recent big rise in solar flux. The running average of solar flux for the previous 90 days rose another two points this week to 81, and the flux on every day was still above the moving average, now for the 51st day.

Solar flux dipped down only to 85.2, but is now climbing back up. Look for the increase to continue, reaching the mid-90s by October 2, and over 100 again between October 7-11. Flux values are expected to dip below 90 after mid-month, and back above 90 a few days later. Of course this is based on the previous solar rotation, and new active areas could emerge which would drive the numbers higher.

The sun has spewed forth several coronal mass ejections recently, so expect the resulting high speed solar wind to cause unstable geomagnetic conditions around September 28-30. This may cause some problems for the RTTY contest this weekend.

The worst day this past week in terms of geomagnetic instability was September 18, when the planetary K index was up to 4 and 5 over several 3-hour periods.

With the rising solar flux and the fall season comes better propagation on 10 and 15 meters, so we are no longer as dependent on 20 meters for long-distance communication.

Sunspot numbers for September 18 through 24 were 30, 18, 15, 39, 47, 48, and 47, with a mean of 34.9. The 10.7-cm flux was 88.1, 89.2, 87.7, 85.2, 88.9, 91.7, and 92.9, with a mean of 89.1. The estimated planetary A indices were 17, 3, 7, 15, 8, 4, and 4, with a mean of 8.3.

ALLAN L. SEVERSON, AB8P, SK

Former Great Lakes Division Director Al Severson, AB8P, of North Olmsted, Ohio, died September 22, 1997, following a long illness. He was 65. Severson served as Great Lakes Director from January 1990 until June 1995, when he resigned for health reasons. Previously, he'd served as a vice director from 1985 to 1990. He was a Life Member of ARRL, and a member of QCWA and the West Park Radiops as well as many other clubs throughout the Division.

Severson had been licensed for approximately 45 years. During his tenure as Great Lakes Director, Severson was a frequent visitor at various hamfests in the Division.

Born in Minnesota and raised in the Dakotas and Washington State, Severson graduated from Golden Gate University in California. For 26 years, he worked as a field underwriter for State Farm. Earlier, he had served in the Marines in Korea and was awarded a Bronze Star, Navy Cross and two Purple Hearts.

Survivors include his wife, Charmaine, and a son, Craig Severson (W8CS, ex-AB8O), and a daughter, Catherine Sanders.

A service will be held September 28, 2 PM, at St Barnabas Church, Bay Village, Ohio. Cards and letters are invited to Charmaine Severson, 28381 North Park Dr, North Olmsted, OH 44070. Telephone calls are welcome after the memorial service.

PHILLIP S. WILLIAMS, 5W1AU, SK

Phil Williams, 5W1AU, died September 19, 1997. Williams served for 17 years as president of the Western Samoa Amateur Radio Club.--Marty Maessen, 5W1AT

IN BRIEF:

* This weekend on the radio: The CQ WW RTTY Contest, and the Scandinavian Activity SSB Contest will keep you busy this final weekend of the month. Details are on page 105 of September's QST.

* Correction/compliment: In our report on new Gate 3 call signs (see The ARRL Letter, Vol 16, No 37), we incorrectly reported Mike Amaral's former call sign. He gave up WA1IDP to become WA1AW. Mike says the "AW" suffix has "a real smooth CW feel," but adds, "It is my little way of saying thanks to ARRL (and HPM!) for the help it provided me over the years, especially when I used the publications How to Become A Radio Amateur and Learning the Morse Code," and for those code practice sessions I copied from W1AW when I was a boy of 12 or so. Mike says he was first licensed in 1967.

* Gate 3 numbers: The FCC reports it issued 597 new call signs in response to vanity call sign applications filed on August 6, the opening day of Gate 3. Another 759 first-day applications were set aside for special handling in the so-called WIPs (work in process) stack at Gettysburg.

* Ham radio at the CMA Awards: Country music star Patty Loveless, KD4WUJ, did not repeat as female vocalist of the year at the 31st Country Music Association awards this week. Loveless had won the award two years running. Country legend Ronnie Milsap, WB4KCG, announced the nominees and this year's winner, Trisha Yearwood. During the awards telecast Wednesday, Loveless performed her latest, "You Don't Even Miss Me," with help from another legend, George Jones.

* World Puzzle Championship special event station: Activity from special event station 9A97WPC at the sixth World Puzzle (ENIGMA) Championship in Koprivnica, Croatia, continues through September 28. The station will be active on CW and SSB. QSL via the bureau or to QSL manager 9A3KQ.--9A6JYL

* Iranian special event station: Special event "pilot" station EP23TIE will be on the air October 2 until October 10, to mark the 23rd Tehran International Exhibition. EP23TIE will be on the air from 0530 until 1330 UTC daily. QSL to the Directorate General of Telecommunications, Box 931, Tehran, Iran.--Iran Ministry of Posts, Telegraph ,and Telephone

* ROARS Silver Jubilee Award: To Commemorate its 25th anniversary, the Royal Omani Amateur Radio Society (ROARS) has introduced the ROARS Silver Jubilee Award. From October 1 until December 31, 1997, all A4 Stations will use /SJ after their suffix. A special event station, A43XXV, will be QRV from December 17 until December 21. The Award will be issued to any DX station that earns five points. Contacts with A43XXV will count three points. Club Stations A47RS/SJ and A47OS/SJ count two points. Other A4 stations count one point. Contacts with the same station on a different band or mode double the point credit. Send your certified log copy with 10 IRCs or US $5 to Awards Manager, ROARS, Box 981, Muscat 113, Sultanate of Oman.--Nasser Khalfan Al Rawahi, A41KG

* RSGB Young Amateur of the Year: Fifteen-year-old Emma Constantine, 2E1BVJ, of West Yorkshire, is the Radio Society of Great Britain 1997 Young Amateur of the Year. Runner up was 14-year-old Mark Haynes, 2E0APH, of Essex. The pair was selected by a judging panel of representatives of the RSGB and the Radiocommunications Agency in Great Britain. Emma is a founder of the Rishworth School Amateur Radio Club, G0SQA, and has been its secretary for three years. The school's science department head, Anthony Vinters, G0WFG, described her as "an excellent ambassador" for Amateur Radio.--RSGB

* Goldwater ill: Press reports say that Barry Goldwater, K7UGA, may be suffering from Alzheimer's disease. Goldwater's wife, Susan, told reporters last week that opinions differ on whether Goldwater actually has the disease or is continuing to suffer the effects of 1996 stroke. Goldwater, the 1964 Republican presidential candidate and a long-time US Senator, remains at his home in Phoenix, Arizona.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

greetings
I have been an amateur since the mid 60's. I have been involved in most of the popular modes since they came into conception, eg 2 meter fm early 70's, packet mid 80's, ssb 68ish, etc.
I am now trying to figure out where this hobby is going. I know that spread spectrum is, more or less, just around the corner but I don't think it will really arrive until the next decade.
Any ideas on what the next major new mode is going to be and where?

Boy, I really blew that one. I must have been a little heavy into the
cooking Sherry. I somehow forgot to put the Web site into my message.
Either that or the Usenet Gremlin snatched it out while I wasn't
looking.

Here are the two Web sites that will be of interest:
members.aol.com/pkkagold/index.html
interflex.com/demos/testdriv.htm

Just download the kademo.zip file and try it.

I could be wrong, on this one, but I think that both amateurs and cb
will be getting together on this band, gmrs and family band. I even
suspect that the amateur community will help the users to keep that
band fairly clean.

Hans Baby,

You flunk reading comprehension big time! This solicitation of minors
was another case altogether and involved the internet. Lower your blue
nose and read the original post again. Abuse of police power is a issue
that at least deserves some thought.

greetings
I have been an amateur since the mid 60's. I have been involved in most of the popular modes since they came into conception, eg 2 meter fm early 70's, packet mid 80's, ssb 68ish, etc.
I am now trying to figure out where this hobby is going. I know that spread spectrum is, more or less, just around the corner but I don't think it will really arrive until the next decade.
Any ideas on what the next major new mode is going to be and where?

>I was used by Ships in distress, before SOS was used, it meant "Come Quick".

No it doesn't! Why would a landline telegraph operator send Come Quick
down the wire?

Let's turn to page 4 of Baarslag's Famous Sea Rescues (formerly titled:
SOS To The Rescue): "By 1904 a number of ships in the trans-Atlantic
trade were equipped with wireless telegraphy. The British operators
were nearly all landline telegraphers who had left railroad or post-
office keys to go to sea in the newly opened field. They brought along
with them not only their Morse code but also many of their telegraphic
abbreviations and signals. One was the general call - CQ, which had
been used to attract attention of all operators along a wire. It
preceded the time signal in the morning at 10 o'clock and also
all notices of general importance. CQ went to sea and became a
general call to all ships."

A couple paragraphs later, "Early in 1904 the Marconi Company, realizing
the desirability of some universal distress signal, filled the need
by issuing the following general order: ``It has been brought to our
notice that the call `CQ' (All Stations) while being satisfactory
for general purposes, does not sufficiently express the urgency
required in a signal of distress. Therefore, on and after the 1st
of February, 1904, the call to be given by ships in distess, or in
any way requiring assistance, shall be `CQD.' '' "

To me, this implies that prior to 1 Feb 1904, some ship did use
CQ as a distress call, and possibly her calls for help didn't
draw the needed attention. (This was before the twice-per-hour
Silent Periods were created - 600m was pure bedlam, and a CQ
would have gone unheeded.)

For more radio history, visit your local research library. But
please don't make up "facts." (Am I the only one who believes that
questions concerning radio history should be included in the
amateur exams?)

Check it out, i run 11 meters, some day i'll get my ticket but i'llstill run 11 meters. I have a Kinwood th-79a and here a lot of potty-mouths on the repeters, there on am cb also and a few on ssb 11 meters, but over all ssb is pretty clean, i use a Galaxy Saturn-Turbo that's been mod. (26-32MHz) . I've talked a lot of skip and have a lot of fun, all with little goverment regulation. Ham, someday but i'm happy for now..
Let's remember 11 meters used to be a ham band until the late 40's and the ham's were pissed off when the gov. took it away and gave it to the cb's. So let's think about this when we dog cber's, also there's alot of hams on 11meters (if they'd admit it) 73's XNJ459 Eastern Ar.

I've seen the 7360 used in SSB balanced modulators, but hadn't considered
the possibility of using it in a receiver front end. I can see how it would be
a good first mixer.

But the real problem with the old designs is the limited number of active
devices which could practically be used. Because of the bulk and filament
power consumption, the number of vacuum tubes you could practically
squeeze into a radio was sharply limited. That meant that every circuit
was severely compromised because it had to met many, often conflicting,
criteria. With the ability to throw many more devices at the problem, each
can serve an optimized purpose. The total system is still a compromise,
but you can make better tradeoffs for the total system because you aren't
as sharply constrained by the characteristics of any individual device.

A modern radio often has millions of active devices in it. That allows you
to produce functions which were simply impractical in the tube days. Yet
the radio can be much smaller, and consume much less power. If we tried
to do that with tubes, the reliability would be so poor that it would never
work, and it would take a dedicated generating station to power it.

It's a question cooperation vs. total isolation.

We could also discuss the economics of complex
adaptive systems. You might want to get into
the mathematics of cooperation vs "stand alone
independence". Not that the later is truly possible.

Try a book or two on the subject...

In most states, a game warden can confiscate a CB and the vehicle it
is in without ANY process except to arrest the owner. He can confiscate
anything used in alleged violation of fish and game laws. You don't have to
believe me. Ask someone who hunts or fishes.
Also, the US Coast Guard can confiscate your boat so fast you won't
know what is happening.

Bob

This seems to be telling us that the "truth" is somewhere in between. I would imagine that its exact meaning is different for each person and circumstances.

Such generalizations are almost always wrong because, IMHO, things are never that uncomplicated. The most avid pro-code-test person, and the most avid no-code-test person, even those who rant and rave in public, have some redeeming qualities. Few however, take the time to look for those qualities in someone who it tossing insults in thier direction. :-)

I believe that we are more productive if we build on each others' strong points rather than focus on the negatives.

I see two possibilities, Randy. First, you could get your ham license and request your father's call sign under the vanity system. Of course, if it has been reissued (I didn't check the database), this wouldn't be possible.

The second possibility, depending on your states laws, would be to pay for vanity plates for the car and request K6RLN. You wouldn't be getting the plates then as ham plates. You might check into this. Good luck.

I don't agree with that at all. Some excellent receivers were designed using a limited number of tubes. You don't make a receiver better by throwing more tubes into it. You make a better receiver by choosing the tube types carefully and then using them in an optimal manner in a carefully designed block diagram. This was a highly developed technology.

With vacuum tubes, more is not better. With RF integrated circuits the exact same thing is true.

Bill W0IYH

4832. Re: Is Ham Radio Dead?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-26 00:00:00 UTC
From: mathtutor@radix.net

I like the idea of being able to communicate without commercial power.
I also know that if needed, big brother would put a hold and shut down
the internet if needed.
They can't shut down battery powered radio transmitters and they
can't prevent RF from being transmitted from point A to point B.
That's why we need to keep amateur radio alive and well.

4833. Re: Sheriff Seizes CBs in WV

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-26 00:00:00 UTC
From: David McKain <mckain@cemr.wvu.edu>
Message-ID: <342BC5B2.A828ED6A@cemr.wvu.edu>
Source record: 189886
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

OK,

I know its hearsay but, from a personal conversation I found out (from someone living in a trailer park who knows of the CB activity) that solicitation for prostitution and drugs were being made using the CB radio channels and that this is what initially led to the investigation. I suspect that the remarks towards the sheriff occurred following the disclosure of the investigation.

Well, Im not afraid of the local sheriff since in general I obey the law.

I will post additional info as soon as I can when it comes out.

DIVISIONAL NEWS

The next VK2 Division Affiliated Clubs net is next Sunday 6 October on
3.595 at 9am local time.

Attention Clubs so far NO NOMINATIONS for this quarters award have
been received. Closing dates is Tuesday week.

-- Ken Westerman VK2AGW, VK2 Division Affiliated Clubs Officer

The October-December broadcast roster has been sent out to VK2WI
broadcast team members. Please advise the office if you don't receive
yours by the end of the week.

VK2RSY 23 CENTIMETRE BEACON BACK ON LINE.

The Dural based 23 centimetre beacon is now back in service following a
check over by members of the Dural Technical Committee.

It was found that power output had dropped to a few milliwatts and the frequency had shifted.

VK2RSY can be found on approximately 1296.425 Megahertz with 3 watts delivered to the slot antenna, 12 metres above ground. Polarization is Horizontal.

Frequency stability is not good due to the high multiplication from the crystal. Consideration is being given to revamping the frequency system at a future date.

It has been planned for some time to place the beacon on the alternate channel of 1296.425 to enable those with chanellized equipment to receive it. Reports are most welcome and a QSL card is available via the normal exchange methods.

--73 Tim VK2ZTM

JAMBOREE ON THE AIR (J.O.T.A.)

SCOUT AND GUIDES JAMBOREE ON THE AIR WILL CELEBRATE THE 40TH YEAR OF OPERATION ON THE 18th-19th OCTOBER WITH OVER 400 STATIONS OPERATING IN AUSTRALIA.

IN 1996 ALMOST 14000 AMATEUR OPERATORS WORLD WIDE WERE KNOWN TO HAVE PARTICIPATED IN THE EVENT AT 5735 STATIONS. THE OPPORTUNITY FOR SO MANY BOYS AND GIRLS TO COMMUNICATE WITH EACH OTHER IS ONLY MADE POSSIBLE BY THE CO-OPERATION OF THE AMATEUR OPERATORS WHO HAVE YEARLY GIVEN THEIR TIME AND USE OF EQUIPMENT TO THE SCOUT AND GUIDE MOVEMENTS.

THE WORLD WIDE INTERNET HAS ALSO IN THE PAST THREE YEARS BECOME AN INCREASINGLY POPULAR MEANS OF COMMUNIACATION WITH BOTH THE SCOUTS AND GUIDES DURING JOTA.

IN APPRECIATION OF OF THEIR HELP IN MAKING THIS 4OTH JOTA, A MEMORIAL OCCASION A SPECIAL ANNIVERSARY CERTIFICATE WILL BE AVAILABLE TO THE AMATEUR RADIO OPERATORS AND INTERNET OPERATORS OF NEW SOUTH WALES WHO TAKE PART.

WIA (VK2 DIVISION'S) NEW SOUTH WALES "25's" AWARD

The aim of the award is to encourage radio amateurs and short wave listeners to activate or to log amateur radio activity from the many different amateur radio stations within the state of New South Wales. Any band, mode and power level permitted by an individual's licence can be used for this award.

The award commenced at 0001 UTC on 1 st January 1988.

The basic certificate will be issued on proof of contact with 25 amateur radio stations. Callsigns of the Wireless Institute of Australia, New South

Wales Division (VK2WI, VK2AWI, VK2BWI) will count as two contacts each. Special event callsigns held by the Wireless Institute of Australia,

New South Wales Division (VK/AX2ITU etc.) will also count as two contacts each. Callsigns issued to WICEN N.S.W. Inc. will not be counted.

Short wave listeners shall need to log the callsigns of both amateur radio stations. A minimum number of 25 amateur radio stations need to be logged in this way to obtain the basic award. (Callsigns held by the New South Wales Division of the Wireless Institute of Australia will be counted

as two contacts each but can only be counted once).

Accurate logs will be required for the award. Logs must show, in chronological order, the following information. UTC date & time; callsign, mode of operation and frequency of operation.

There are no endorsements for this award

Applicants for the award must submit full log sheets and declaration in accord with the General Rules for all WIA awards, as listed in the current Australian Radio Amateur Callbook. The VK2 AWARDS application form must be completed and submitted with all logs and applications.

The cost of the basic award is

Australia & Territories: Aus$4.00 (4 IRCS)
Overseas Air Mail: Aus$5.00 (5 IRCS)

Payment may be by cheque or postal order and shall be in Australian currency only. International Reply Coupons (IRCS) of less than one year old may also used to apply for the award.

For the booklet containing the information on this and the other WIA VK2 awards, please send a stamped self addressed envelope (at least 200mm x 100mm or 8 inches x 4 inches) to;

The Awards Manager
Wireless Institute of Australia
New South Wales Division
P.O. Box 1066
PARRAMATTA N.S.W. 2124

--Peter O'Connell VK2EMU Divisional Awards Manager

On Internet, you will find details of all VK2 awards; simply go to the VK2 Divisional home page at: http://marconi.mpce.mq.edu.au/wia/ ...just click on "Awards" in the Navigation section.

WICEN NEWS

A mailing list for those interested in WICEN has been set up; just send a message to "majordomo@marconi.mpce.mq.edu.au" with "subscribe your-email-address" in the body of the message. Following approval, you will then be added to the list, and further instructions will follow. Note

that although the list is unmoderated, it is closed i.e. only subscribers can post to it. We believe this to be a better system than the old

telephone BBS still in use by some organisations.

WICEN has been asked to once again provide radio communications for the "Ironman Australia" Forster-Tuncurry half triathlon, to be held on Sunday 23rd November. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed.

Next month looks like being quite busy. The Oberon Car Rally, run by Neil VK2XNF, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over the weekend of 18th-19th October; and the annual Bungonia Cave Rescue, run by Mark VK2XGK, will be on the weekend following, 25th-26th October.

The latter exercise, Bungonia, is planned to be a full-scale DVR (Disaster Victim Registration) exercise, with co-operation from the NSW Police and the other paid (and unpaid) services, and is excellent practice for operating in remote places (although you will be fed).

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

DX REPORT

RODRIGUEZ ISLAND - Toshi JA1ELY and Roddy 3B8DL will activate the island as 3B9/3B8DL on 80 to 10 meters using CW, SSB and RTTY. They may operate primarily on 20 meters.

REUNION - Jan N3NW is active as FR/N3NW in the CQ WW RTTY Contest this weekend.

SVALBARD - LA8XM will be active from Bear Island as JW8XM until September 29.

GUANTANAMO BAY - KG4GC will be a Multi/Single entry in the CQ WW RTTY Contest this weekend. Some of the guest operators will also be active from September 29 to October 3 on all bands and modes.

KURE ISLAND - A multi national team plans to activate K7K until October 4. The team expects to be on all bands and modes with up to five HF stations operating continuously. Emphasis will be given to working stations in Europe and Africa where KH7 is most needed.

ALAND ISLAND - Martti OH2BH and Jukka OH2MAM are active this weekend in the Scandinavian SSB contest, from the OH0W contest station.

CORSICA - Vaclav DL4FF will be active as TK/DL4FF until October 10.

CHAD - TT6SE and TT6EB are active until January 15, 1998, using CW, SSB, RTTY and SSTV.

CHAGOS - Look for Rick WB0BNR operating as VQ9AI until mid November. He can be found daily on 20 meters around 1300z.

GIBRALTAR - Jimmy G3HBN will be active from September 30 to October 14 as ZB2/G3HBN.

PARAGUAY - Ernesto LU2BRG is active this weekend as ZP5XF in the CQ WW RTTY Contest.

-- ARRL DX Bulletin 41, dated 25 September, 1997

HAM LOG PROGRAM UPDATED

Keen Dxers who use a PC to log their contacts will be pleased to know that Robin Gandevia VK2VN has updated his "Ham Log" logging program.

According to Robin, many users find Ham Log so easy to use that they never consult the manual. As a result, you can now obtain an "environmentally friendly" Ham Log, without the printed manual, at a 30% discount. The text of the manual is of course available on the disk, along with context-sensitive help.

Listeners can contact the Author, Robin Gandevia VK2VN on Internet; his email address is

rhg@ozemail.com.au

A demonstration version of Ham Log is on Internet, hosted by Richard VK2SKY. The URL for the Ham Log page is:

http://www.zeta.org.au/~richardm/hamlog.html

If you missed that, just go to the VK2 Divisional home page, and you'll find a link in the "What's New" section.

SPACE NEWS

NASA LETS KC5VPF VISIT MIR

Ham radio aboard Mir will continue at least for another four months. US astronaut David Wolf, KC5VPF, will get to replace his colleague Mike Foale, KB5UAC, aboard the Russian space station. Under intense

political pressure to consider discontinuing the presence of US astronauts aboard the ailing and aging space station, NASA Administrator Dan Goldin gave the okay September 25 for Wolf's Mir stay. Approval came only hours before the shuttle Atlantis was to be launched from Cape Canaveral on mission STS-86 and a rendezvous with Mir. Wolf will continue the permanent US presence on the station that began in 1996 with Shannon Lucid.

Goldin cited separate scientific reviews of the situation aboard Mir in his

decision to deliver Wolf to Mir as originally planned. ''We move forward not only because it is safe, but for the important scientific and human experience we can gain only from Mir,'' Goldin said. He added that, as NASA looks toward next June's launch of the first element of the International Space Station, ''nothing can beat the hands-on, real-time training aboard Mir.''

Early this year, a fire broke out aboard Mir. The spacecraft also has had various mechanical problems, including malfunctions of its oxygen-generating and carbon dioxide scrubbing systems. In late June, a collision with an unmanned Progress supply rocket during a docking maneuver damaged the spacecraft's Spektr module and disrupted scientific research. Among subsequent problems, Mir has suffered from repeated computer system failures, including a failure earlier this week. The Atlantis is to carry a new computer to Mir.

Wolf, 41, is both an electrical engineer and a medical doctor. A native of

Indianapolis, Wolf is single. He has been an astronaut since 1990 and served as a mission specialist aboard the shuttle Columbia in late 1993. Meanwhile, astronaut Andy Thomas is scheduled to replace Wolf aboard Mir in January. Thomas just received his Amateur Radio call sign. He's KD5CHF, which he says stands for ''Cosmonauts Having Fun.'' He will take the place of Wendy Lawrence, KC5KII, in the Mir rotation.

--ARRL Space Bulletin 30, dated 25 September, 1997

AMSAT P3D LAUNCH DELAY OFFICIAL

AMSAT's Phase 3 D ham radio satellite will definitely not be launched aboard the Ariane 502 booster later this month and AMSAT has begun negotiations for a new launch opportunity.

Ron Broadbent, G3AAJ, of AMSAT UK tells the GB2RS News Service that Phase 3D will not be on Ariane 502 that's due for launch on the 30th of September. He also tells GB2RS that AMSAT's Phase 3D launch contract with the European Space Agency has been canceled by mutual consent.

Two weeks ago AMSAT here in the USA made it official that the Phase 3D payload would not be ready for the late September launch. This is because ESA provided last minute new data that forced AMSAT to structurally modify the Phase 3D spaceframe to bring it up to new mechanical standards. But, making the changes put Phase 3D out of

sync with the Ariane 502 launch schedule. It has also added $25,000 to the satellites prelaunch cost.

But in making the announcement Broadbent also has good news. He says that a launch contract for Phase 3D is now being renegotiated with ESA. At the same time, AMSAT is also talking with various other unnamed launch agencies. Broadbent says that at the moment options are very fluid but there is a good possibility of a launch in as little as five
or six months time.

(Via GB2RS, AMSAT-UK, and Amateur Radio Newsline)

JOTA BALLOON LAUNCH

Listeners who are interested in remote repeaters, weak signals, packet and SSTV should listen on Saturday October 18th during Jamboree on the air, for the beacon launched by members of the Scout Radio and Electronics Unit. If in the past you have monitored balloon launches from VK3 you would be aware that the payload is packed with very sophisticated electronics, this launch is no exception. Using Packet and Phone the payload reports on a regular basis: altitude, rate of climb, flight time, internal and external temperature plus its Identification message on the telemetry frequency of 145.7 which is the national ARDF homing beacon frequency. New for this launch is the cross band repeater with 4/ 70cm uplink and 4/ 2m downlink channels, along with the repeater there will be SSTV transmissions and as the camera is B&W the Robot 36 mode has been chosen. Output power will be 100mW but for the Packet bursts increased to 1W, total weight of the payload is under 1Kg and the flight is expected to last up to 3 hours. During the balloon's flight it should reach an altitude of 20+ Km. and should be heard in VK's 1,2,3,5 and 7. If you are interested in this event here are the vital details
again:

Launch Date: Saturday 18th October.

Launch Time: 13.00 hours est. (03.00 UTC)

More information can be obtained from viewing the launch home page at: http//www.netlink.com.au/~davbjorn/sresu/index.html

--VK3WWW Jack Bramham.

CLUB NEWS

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION.

The Association has refurbished the antenna for the northern link from Sydney. There was a problem with the antenna, so it should be easier to exchange traffic to the north.

Also the Association has obtained some new shareware software titles. John VK2WRT will pass the titles on as he

receives them. Or ring the secretary on phone number 9489 4393 for more information.

--Submitted by John VK2WRT, Publicity Officer.

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD ON OCTOBER 12 - WEEK BEFORE JOTA

AATC COMITTEE MEETING AT WAYNES, MONDAY NIGHT

FOR MORE INFORMATION ABOUT ATV, CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

HORNSBY & DISTRICT ARC. INC.

The next meeting the mid monthly informal get together, will take place on Tuesday 14 th. of October, in the Mount Colah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) at 8:00 pm. Last Tuesday nights, guest speaker Colin Christenson VK2BCC. from the Australian Communications Authority, (ACA formerly the SMA) Colin gave a little history of his association with

the departments, agency, and authority. Colins talk was well received, and very well illustrated, thanks again Colin .

The Club net is every Monday night using the Club call sign VK2MA. through the Club repeater VK2RNS., the frequency Is 147.250 with a positive offset, all are welcome to join the net, and listeners tune your receivers to 147.250. Yes! we would like you to join the net, or come along to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities write to HADARC., Post Office Box 362., Homsby 2077., or phone John VK2WRT on 9807 2490 again 9807 2490.

--John. W. Turner VK2WRT Publicity Officer.

AUSTRALIAN NATIONAL AMATEUR RADIO TELEPRINTER SOCIETY.

A GOOD MANY STATIONS IN AUSTRALIA WHO LOG ONTO THE PACKET SYSTEM, ARE ALSO CAPABLE OF OTHER MODES, SUCH AS RTTY, AMTOR AND PACTOR. WHY NOT MAKE A LITTLE MORE USE OF YOUR MODEMS.

FOR ALMOST 20 YEARS, ANARTS HAS TRANSMITTED A RTTY BROADCAST EACH SUNDAY AT 0030 UTC ON 7042 AND 14091 KHZ AND 0930 UTC ON 3542 KHZ. AN AMTOR FEC TRANSMISSION IS ALSO MADE AT 0030 UTC ON 14070 KHZ. CALL IN'S AND CALL BACK'S ARE TAKEN ON 7042 AND 3542 KHZ.

SOME STATIONS MAY THINK THAT RTTY IS OUTMODED AND IS NOW USED BY JUST A FEW KEEN ENTHUSIASTS. JUST LOOK AT THE NUMBER OF ENTRIES IN THE VK2SG DX NOTES EACH WEEK AND YOU WILL SEE THAT STATIONS IN OTHER COUNTRIES DO NOT VIEW IT IN THE SAME WAY.

DURING THE LAST FEW DAYS I HAVE WORKED QUITE A LOT OF EUROPEAN DX, USING RTTY, ON 20 METRES. INCLUDING FRANCE, HUNGARY, GERMANY AND ROMANIA, PLUS THE VK9 DXPEDITION ON WILLIS ISLAND.

I INVITE ALL STATIONS TO RECEIVE OUR NEXT BROADCAST AND TO CALL IN OR BACK. BACK, I LOOK FORWARD TO MEETING YOU ON AIR.

--COL VK2CTD, PRESIDENT OF ANARTS AND 40M BROADCAST RELAY OFFICER.

BROADCAST ROSTER

Next Sunday, 28th September, 1997

Morning:
Announcer: Peter VK2BPN
Engineer: Bernard VK2IDS

Evening:
Announcer: Pat VK2JPA
Engineer: Kevin VK2CKD

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.
Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

Hi Jeff, CQ was an abbreviation for "Call to Quarters" in the military. (Don't know if it is still used or not). It meant for everyone to move from wherever one was presently back to a known position, usually the bunk area. For a telegraph operator it could have meant for all operators to return to a known position, i.e. the operating position for a telegraph operator, in effect a signal to listen up. If I remember right, there is a bugle call for call to quarters.

4840. Kenwood TM-261A veteran wanted!

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-26 00:00:00 UTC
From: David Barnes <david_barnes@hp.com>
Message-ID: <342BDB42.19A@hp.com>
Source record: 189893

I just got a Kenwood TM-261A 2M mobile rig, and am having trouble understanding some of the advanced features; I can't seem to reconcile the manual with some of the functions, in particular, setting a group code with an A, B, C, D, E or F "wildcard". Maybe I just don't understand how the feature is supposed to work and am misinterpreting the manual, but I'd swear some statements are just wrong. Kenwood tech support says they're going to go over this with the guy in charge of manuals, because the manual does seem to be misleading, and they can't get the rig to work as claimed in the manual. Incidentally the tech support guy I've been speaking to has been VERY responsive and willing to help me, no complaints there. It's just that he's not a personal regular user of the rig, just sort of familiar with it.

I think I'd benefit from someone who really knew the TM-261A rig and could explain this feature (and others) to me clearly. Would anyone be willing to exchange a few emails with me, or talk with me on the phone for a few minutes to try to figure out some of these things?

Much appreciated!

IMO, the most likely reason for the demise of amateur radio will be outlawing by the federal government around the same time that guns are outlawed. A socialist welfare state cannot tolerate freedom of speech.

4844. 50.400 AM this weekend

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-26 00:00:00 UTC
From: Dave Booth <*SPAMSAVER*booth@pactitle.com>
Message-ID: <342BEBBF.1CFB@pactitle.com>
Source record: 189897

Hello everyone,

I will be calling CQ on 50.400 AM all this weekend.

Fri 9/26/97 16:00-22:00(PDT 23:00Z-05:00Z
Sat 9/27/97 07:00-22:00(PDT) 14:00Z-05:00Z
Sun 9/28/97 07:00-20:00(PDT) 14:00Z-03:00Z

I'll be calling CQ on the top and bottom of the hour.

Lets all get out on 50.400 AM and have some fun.
Solar conditions are favorable!

Equipment being used will be:

Gonset G-50 25w into ARX-6
Swan 250 40w into G5rv
Icom IC-726 into Marage A1015 150W into ARX6

If you have not seen my 50.400 AM page please check it out and let me
know what you think.

http://www.geocities.com/Hollywood/5860/50am.html

I think this will be a FUN weekend!!!!!
Everyone let me know how you all did and what equipment you used.

Thanks for your participation!

I have to agree that making ham equipment hard to buy hurts us all in the end, visibility, reputation, and all. I find the idea of legally restricting sales to non-hams offensive at the very least, especially since thanks to the 11-meter crowd our reputation grows slightly more tarnished with every interference complaint spurred by them and blamed on us. Band threats are always an issue, and if we're not out there using the bands we hold, they can be taken away by the short-sighted folks in commercial communications. (Speaking of which, what happened to the 146-MHz commercial satellite proposal?)

However, it's important to make sure that access to the equipment is through the community in some way. Legal means probably aren't appropriate, but it's worth the investment to try and get hams involved

in the sales as much as possible. I try to recruit any nonham
salesperson I encounter. It makes for a more intelligent sales pitch if
nothing else.

4847. Police frequencies in SF Bay Area Peninsula

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-26 00:00:00 UTC
From: David Barnes <david_barnes@hp.com>
Message-ID: <342BDF8C.4467@hp.com>
Source record: 189900

Does anybody know the police channel frequencies for the San Francisco Bay Area Peninsula, specifically Palo Alto, Menlo Park, etc.?

I have the Kenwood TM-261A 2-meter mobile. Do I need to modify it to receive out-of-band frequencies like Police? (I think it already is set up to receive AM aircraft transmissions)?

> felt uncomfortable with some of the language."

Have to say I've noticed this problem in central Texas -- part of what
got me *off* the 11m band and into ham radio. Some folks seem to have a
perverse (no pun intended) attraction to making very offensive
solicitations to the more "macho" truckers just to hear them foam at the
mouth. (Traveler, you listening?) This kind of QRM seems to have
spilled over into most of the available channels now, including 9 and 11
which as I recall are supposed to be reserved for emergency and calling
respectively. Discipline isn't exactly the watchword.

Quite frankly, the only contact I have with 11m now is the occasional
illegal operator coming out of my household equipment, and the one that
got into a guy's 2m mike the other day, echo and all ...

> To answer another point--Moonbounce was "operational" between DC and
> Pearl, but I doubt you could have mounted a reasonable antenna on any
> other ship. (As a sidenote, I've uncovered recent evidence that
> Moonbounce ELINT was also an operational system during the 60s, although a
> very limited one.)

I read in James Bamford's *The Puzzle Palace* that a very large (600-foot?) steerable radio telescope, under construction in the Sixties but not completed, was a cover for an effort to gather electronic intelligence from the Soviet Union by listening to stray signals bouncing off the Moon.**

I was very surprised to read this, because contemporary books on radio astronomy had always explained that telescope as a civilian project! For radio astronomy, it was the Supercollider of its time, cancelled because of cost overruns...

This is tangential in Bamford's book-- might even be a footnote-- but perhaps somebody else has gone into more detail on the history. I presume they wouldn't undertake the megaproject if they hadn't already tested the concept of moonbounce ELINT with a smaller system.

As ELINT from satellites became feasible in the late Sixties, the need for such a desperately clever system faded away.

I wonder how they would have worked this thing, had it been built? Give telescope time to astronomers when the Moon was in the wrong position to eavesdrop on the Reds, and schedule spooks the rest of the time?

Would there be an attempt to keep the facility secret? How could you do that when there were a bunch of university astronomers crawling around all the time?

Would they try to keep non-U.S. astronomers from using the thing?

If I crosspost this to sci.astro, will I hear from radio astronomers who have heard folklore from Old Hands about it? Maybe a couple of other groups would be relevant. Followups to sci.space.history. (Readers knowledgeable about radio may also wish to read Dwayne's parent article in that newsgroup.)

**Bamford and others also mention that the U.S.S. *Liberty* and other

ships had big dishes for moonbounce communications, but this was for
transmitting ELINT data back to the U.S., not for lunar evesdropping,
if I'm not mistaken.

From Tad Cook, K7VVV
Seattle, WA September 26, 1997
To all radio amateurs

SB PROP ARL ARLP039
ARLP039 Propagation de K7VVV

Solar activity was down, but still quite good this past week after the recent big rise in solar flux. The running average of solar flux for the previous 90 days rose another two points this week to 81, and the flux on every day was still above the moving average, now for the 51st day.

Solar flux dipped down only to 85.2, but is now climbing back up. Look for the increase to continue, reaching the mid nineties by October 2, and over 100 again between October 7 to 11. Flux values are expected to dip below 90 after mid month, and back above 90 a few days later. Of course this is based on the previous solar rotation, and new active areas could emerge which would drive the numbers higher.

The Sun has spewed forth several coronal mass ejections recently, so expect the resulting high speed solar wind to cause unstable geomagnetic conditions around September 28 to 30. This may cause some problems for the RTTY contest this weekend.

The worst day this past week in terms of geomagnetic instability was September 18, when the planetary K index was up to 4 and 5 over several 3 hour periods.

With the rising solar flux and the Fall season comes better propagation on 10 and 15 meters, so we are no longer as dependent on 20 meters for long distance communication.

Sunspot Numbers for September 18 through 24 were 30, 18, 15, 39, 47, 48 and 47 with a mean of 34.9. 10.7 cm flux was 88.1, 89.2, 87.7, 85.2, 88.9, 91.7 and 92.9, with a mean of 89.1, and estimated planetary A indices were 17, 3, 7, 15, 8, 4, and 4, with a mean of 8.3.

Use of radios in hunting are primarily to prevent organized groups of
parties from hunting in unison over large areas. That's the rationale,
at least around here. Therefore, its against the law to use a radio in
hunting activities.

> Also, the US Coast Guard can confiscate your boat so fast you won't
>know what is happening.

If you do something illegal, yes. If a Coasty sees your boat and decides
he likes it, he can't confiscate it and take it home with him.

Point is, confiscation as part of an illegal activity is not unusual.
However, the news report indicated people had their radios confiscated
for using "foul language". One guy supposedly had his radio confiscated
for "bad mouthing" the Sheriff. Since when is "foul language" and
"bad mouthing" illegal activities?

Funny thing...I thought violation of p95 would fall under Federal jurisdiction. Shouldn't the Sherriff be arresting the prostitutes? That's a local matter....

The story didn't state if warrant were issued. A crime in the prevention of a crime is still a crime. (Say that 10 times fast)

EMC specification are 2 fold - radiated and conducted.
In both cases you have to consider emission and susceptibility.

Radiated is the direct emission or reception of unwanted signals
Conducted is the same but true the power cord.
The unwanted signal have to be below a specified value for emission
and above an other value for susceptibility.

In order to perform those measurements specific setups and
environmental conditions have to be satisfied.

For instance for radiated emission you need:
- a free open area not obstructed by reflecting items called outside
air test site (OATS)
- or an anechoic chamber (closed room with absorbing material).
The measurements have to be performed at a distance of 10 meters
(approx 10 yards, 32 feet) with an antenna polarized vertical and
horizontal and the equipment rotated in order to find maximum signal
strength.

Its to long to explain the whole thing.
The european generic regulations (for residential and commercial
equipment) are known under the numbers EN50081-1 and EN50082-1.
There are US equivalents IEC...

For more info you can subscribe to the EMC-PSTC maillist
or sci.engr.electrical.compliance newsgroup where the regulation
question are discussed, how to interpret and how to perform them.

Putting on my crystal ball<g>..

I think some kind of regular (not spread spectrum) digital audio will be the next *major* mode change in amateur radio. Digital cellular is currently being deployed. The chips will become (already are?) quite inexpensive; sooner or later, someone will be sufficiently tempted to use one of these on the amateur VHF/UHF/microwave bands. Narrowband single-frequency digital audio eliminates or reduces many of the problems facing VHF/UHF analog FM amateur radio, notably squelch glitches from distant repeaters and intermod. It also opens possibilities for high-quality digital linking, automatic identification, and simultaneous voice & data transmission. And, I think the gear can be built/marketed for prices similar to current VHF/UHF analog FM gear.

Work is progressing on digital AM broadcasting in the 525-1705KHz band too. If this succeeds (I personally think "If" is an important word here<g>) I could see it being tried on the HF bands. However, I have my doubts there will be an overall advantage in using single-frequency (as opposed to spread-spectrum) digital audio on HF.

But I think the biggest technical advance in HF is not a change in modes, but in receivers and operating practices. Advancing QRM and QRN-cancelling technology (DSP and phasing) will (already have) open up 7100-7300KHz for nighttime use. The continuing move of much local-area work from low HF to VHF/UHF analog, digital, and packet will reduce the QRM levels on HF, and relieve the pressure for new bandwidth-saving HF modes.

Spread-spectrum will be a valuable and interesting mode, and I think it'll see a lot more experimentation in the future. But I don't think it's that close of a match for amateur operating practices, and the gear will remain relatively expensive for awhile yet. I think single-frequency modes will remain dominant for years to come.

greetings
I have been hearing more and more about these glass mounted, no hole,
antenna instations.
I realise that they are used quite extensively in cellular radio.
My understanding is that they couple the signal, through the glass,
using inductive loops.
Has anyone used those antenna, who could give me their opinion on them
plus has anyone done signal strength comparisions studies?

Here is a summary of news items covered on edition #235 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 3-Oct:
-
1. ARRL Rejects NLI Section Manager Recall Petition
2. KC5VPF Heading for Mir to Replace KB5UAC After Flawless Launch
3. Amateur Radio Designated First Official Payload on ISS
4. New FCC Form 159 Still Causing Confusion for Vanity Filers
5. Former ARRL Great Lakes Division Director Al Severson, AB8P, SK
6. Special Event Station Calendar
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. AMSAT-NA Announces Results of Board of Directors Election
10. Morse 2000 Project Announces Seminar, Offers Outreach Services
11. Landmark EME Contact Completed on 2 Meters
12. RSGB Announces Winner of "Young Amateur" Award
13. Patty Loveless, KD4WUJ, Sings at CMA Awards, No Win This Year
14. "The RAIN Dial-up" from Chicago
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
```

repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

It is with deep sadness that I report the passing of Steve Eklund, WA3RVT.
It was reported that Steve passed away suddenly sometime Thursday night 9/25
at home due to massive injuries sustained in a fall down stairs.

Funeral and viewing arrangements are pending.

Steve was responsible for maintaining the DCARA (Delaware County Amateur Radio Assoc) repeaters in Darby, PA (Philadelphia area) on 147.360, 224.500, and the WA3RVT repeater system on 444.05 MHz. Steve was also co-net controller for the DCARA swapnet.

Steve will be sadly missed. Indeed, amateur radio community has lost a dear friend.

Our deepest condolence to Steve's wife Cheryl, N3VKB and family.

Brian Pasternak, KA3VSP
DCARA Vice President

Source record: 189739

Doug:

Are there effective add-ons to older rigs that will really accomplish
this, or does one have to come up with the bucks for the pricey newer rigs?

Suggestions as to the best add-ons and/or rigs? I hope to get active
again this Spring, but hate the obnoxious garbage spewed (QRM) by so many
refugees from CB on the ham bands, and I get clobbered here on 40 by the
shortwave stations splatter, and evening QRN.

Thanks! DavidC AA1FA

Yup, go ahead, fire away at me too. We're doing a class in Laurel, MD,
and it's basically a no-code Technician class.

We asked the TWENTY-THREE participants to stay after class was
over if they wanted to learn the code, too.

Eight of them stayed afterwards.

I'm teaching a code class!

So only your personal experience (as related above) would
indicate that (in this case) only about 1/3 of those interested
in becoming hams are willing to even TRY to learn the code?

It will be interesting to see what your drop-out rate will be
once they find out that it's not easy and how slow and
cumbersome Morse really is ...

Source record: 189748

I have used gall sount antennas for 15 or so years starting with the 2-M Avanti which is no longer made. They do work, hoever they are not as efficient as a roof mount antenna. The Larson 2/70 antenna which I have on my Nissan Altima has a high VSWR on UHF and resulted in my losing of a $135 power module. Several go arounds with Larson brought me no satisfaction. I would advise staying away from the Larson line. The Pro-Am seems to work and I heard that MFJ is introducing a low cost line of them.
Unless you are intent on not punching holes, go for a roof mount.
Otherwise good luck.

Have been away from the hobby for a few years and need some
refresher information...could u help me!
What freqs are good now...10meters? 15 or 20? Guess 40 is still good
during the daytime....I used to know all of this.

I'm not planning to work 10, but would like to work either 15 or 20 and
40. 80??? Not a lot of space for an antenna where I live. Incidentally I
live on the West coast of Florida.

73's and thanks for the help in advance.

Or we could look back to 1984, when I got my license. I was KA3NJI.

Who do we have (my Novice class, taught by the IBM ARC, Gaithersburg, MD)?

KA3NJF T+
KA3NJG N (expired)
KA3NJI E
KA3NJN G
KA3NJP N (expired)
KA3NJS A
KA3NJT N (expired)
KA3NJW N

So of the original eight, we have:

One Extra
One Advanced
One General
One Tech+
One active Novice
Three expired Novices

which means exactly 1/2 of the folks WHO ALREADY DID
the code continued to upgrade from there. The novices
would have had to pass A SINGLE written exam to get
VHF privileges, yet never did.

The people who were getting Novices and not
upgrading are the "never to upgrade" contingent of the
No-code licensees of today. But at least they can operate
VHF, right?

Sure. If you like where this Sheriff starts, you will not like where his (or other LE) actions stop.

1.) Where is his authority to do this?

2.) Who is he to do this without filing charges and letting the legal system decide if these people committed a crime and what their punishment should be?

3.) What about due process and presumption of innocence? He has violated the alleged perpetrators rights.

4.) Where do these Gestapo actions stop?

I wholeheartedly agree that people should obey the law and that it should be enforced. That said, this LEO is picking which laws he wants to enforce and ignore. That is not the way for him do to do business.

1) It's a service, not a hobby.

2) I'm teaching ham radio to between 4 and 6 neighborhood kids.
We went over licenses and privileges today, and when we got to
the code, nobody said, "That's stupid."

They said, "5 words per minute? How hard is THAT?"

The ONLY people I've EVER heard bitch about having to learn
Morse Code are adults who feel they should've already earned
a "get out of Morse free" card via their amazing life experiences.

The no-code license is a GREAT entry-level license. Yes,
Morse code CAN be tough to learn, but it's certainly not hard
for most people. It's more a question of desire and the ability
to expend effort to learn something new.

Hi

Im writing to say that AirNav, the Aircraft Tracking Software
for Windows has a new web homepage:
(The URL is the same: http://www.geocities.com/SiliconValley/Lakes/9420)

The new page includes:
-New detailed info on the program with more and better ScreenShots;
-HF airband information;
-More than 700 aircraft related links;
-Completely new look;
-Order information.

Also would like to say that AirNav is now on Version 1.11 which
has all reported bugs corrected - you can download a DEMO version
of it at AirNav URL.

Thank you very much,

Andre Brandao

life experiences.

I'll let the personal insult slide. I have an extra
class license, and can
copy 20+ WPM anytime. I still say that the code is
a stupid requirement
that has greatly harmed our hobby by starving it of
new blood.

Hey, guess what, chum. You have heard ME criticize
the code, so I guess
that your statement that the ONLY people you've EVER
heard etc. etc. is also
wrong.

>
> The no-code license is a GREAT entry-level
license. Yes,

In actual fact, code is not really "learning." It does not involve the cognitive functions. It is essentially a skill, like riding a bicycle. Knowing code, unlike learning the regulations, or learning basic theory, does not make a person a better amateur.

Ever seen a WRR-2 (FRR-59)?
Made by National circa 1965
64 tubes, synthesized HFO
2-32 Mhz AM/DSB
200+ lbs
24 inches worth of 19 in rack

The ultimate boatanchor receiver...

<342E0886.2CEB@postoffice.worldnet.att.net>...
>
> Hello,
>
> I might be sticking my nose in where it does not belong.

Not at all ... despite the pro-code fanatics who insist that
only current, (coded) licensed hams should be involved in
any debate or decision-making relative to amateur licensing
requirements, there are many of us who recognize that ham
radio has suffered terribly for it's stodgy, backward, Luddite
ways over the past few decades through the loss of thousands
and thousands of good folks (including a huge number of very
qualified technical professionals who see no use (to them) for
Morse and refuse to waste the time jumping through the hoop
for the amusement of the olde fartz ...

> But I have no radio license as a ham.

You are, I assume, an American (judging from your name
and e-mail address, that seems likely) ... therefore, you are
entitled to participate in the debate and even the decision-making
process WRT the FCC's regulation of the public spectrum ...
including the ham bands ...

> I have one that goes with flying a small
> private airplane. And yes all I learned for that was proper etiquette
> in using the radio. Seems like enough if you ask me. I even think some
> equivalent for ham radio at a starting level is fine.

Unlike the other radio services, where folks are not supposed to
build, tinker with, or otherwise adjust their radios in ways that could
affect their proper operation and cause interference to others, hams
are specifically *supposed to do EXACTLY that* ... therefore, knowledge
of the theory of radio operation and some minimal technical skills are
necessary ... even for beginners ...

> I have considered getting into ham radio.

Please do ... don't let the Luddites and cranky olde fartz chase you
away ...

> And being the person that I
> am I would considering learning the technical aspects of how the
> equipment works desirable and interesting. And not a waste of time.

A no-code tech license would be a fine starting point ... that will get
you on the air in the VHF/UHF bands, where there are lots of interesting
things to do ... with 5wpm Morse (at this time) you get Morse privs on
small parts of several HF bands and voice and digital modes on a slice
of 10 meters ... not the best package, but your voice will help us to
effect the necessary change to something more modern and progressive.

> But I would say that to me with many responsibilities elsewhere, that
> I would view time spent learning Morse code to be a waste of time. Not
> having learned it I don't know how much time would be involved.

For many people 5 wpm is *relatively* easy ... it's the faster and faster
Morse tests that the ARRL/FISTS/olde_farte "traditionalists" insist on
forcing on everyone to obtain totally unrelated voice and data privs on
HF that are hard for many, impossible for some ...

> But I
> would only be "jumping through a hoop" as another put it so well. And
> as soon as possible would want to move on to voice or some other radio
> activity. And no one is saying they wish to stop others from using
> Morse if they wish. Some just don't wish to be forced to know it for
> the benefit of another's sense that one has really earned his license.
> I see no practical need that one know Morse before having a license.
> We all got better things to do in my opinion.

Please get your tech license, join us on the bands and here on the net
and help us to modernize ham radio so that it can survive and grow into
the coming century ...

I was going to reply to just the sender, but this is such a good question ... I said "what the heck"

There are thingies call "Nets" - I know of about 13 on 2-meter in my area (Mid-East Colorado). These nets cover everything from fox-hunts to Edge-of-Space to Emergency Preparedness to just plain "traffic nets". To join one of these nets, just sign-in when the net control calls for it. Do this every week for about a month (work every net you can). Three things will happen...
1. You will meet a bunch of people
2. You will actually be doing something with your new hobby / skills
3. You will make a bunch of contacts and polish your radio skills.

How do you find a net?

There are a couple of ways. I found the net schedule for Colorado Springs on the InterNet. Another ways is tune to the better repeater in your area at about 19:00 or 20:00 hrs... that's when most nets get under way.

Soon you will know a bunch of people and you will be putting your skills to good use!

>
> Thanks in advance

Yes, you're exactly correct. Jump in at an appropriate time in the
conversation (or after it) and introduce yourself, mention that you're
new, etc., etc.

Everyone was new once, so folks will understand and should encourage
you. Don't be shy!

A couple of things to remember:
1) Know how to use your radio BEFORE transmitting.
2) Be reasonably sure you have an acceptable signal into the repeater --
outside
antennas are preferable.
3) Don't use "CB" lingo, 10-codes, Q-signals (on voice), phonetics, etc.
If
regular English is good enough for a telephone call, 99% of the time
it'll
be just fine on FM repeaters.
4) Speak in a natural voice, with moderate intensity -- just like in
person.
5) Most repeaters are member supported. If you intend on using a
repeater regularly, it's considered polite to join the organization
that sponsors it.
Almost all repeater groups will encourage casual use by non-members,
though.
6) Remember that anything you say can be (and probably is) heard by
anyone with a
scanner, etc. Don't divulge personal information that could
compromise your
safety or the security of your home/auto. A friend of mine had his
car
burglarized after he announced on the radio where and for how long it
would be
parked.
7) Enjoy yourself!

Welcome to the hobby -- 73!

>cumbersome Morse really is ...
>

Carl, you let the proverbial cat out of the bag... Let us take
just the last sentence:

Are you saying we must make the testing easier than it
already is? Your observation about the modern young
human beings wanting it to be easy or they will drop out is
unfortunately all too true. At least it seems to be true and
of course we cannot apply that observation to everyone --
thank goodness... Getting this back in context, you
are advocating ridding us of Morse tests because they
will be viewed as too hard and too much work. I can
only assume you feel the same way about the rest of
the testing, eh? If not, then you have a totally inexplicable
double standard. Also, you have negative expectations,
period. And, it shows through very clearly that it either
pleases you or does not surprise you that only one in
three even wanted to try. Well, never mind, Carl -- we
now have a bunch of no-code techs we did not have
before, because they passed (test mustn't have been very
hard, right?), and they will enjoy all that ham radio has
to offer (yeah, right). I know you did not say that, but
I think youj are pleased that 2/3 of the no-coders did
not want to work on upgrading because that would be
too hard, and the other third in your mind will indeed
find it too hard once exposed to it. Ham radio is not
for everybody, and making it so is ruining what is left
of ham radio.

Again, you said, and I see no reason not to keep this
little snippet of brilliance as evidence of where you

really are coming from.
Carl Stevenson said:
>It will be interesting to see what your drop-out rate will be
>once they find out that it's not easy ....

4913. MN ARES bulletin

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-28 00:00:00 UTC
From: hansbrakob@juno.COM
Message-ID: <19970928.160631.3158.0.HansBrakob@juno.com>
Source record: 189675

From: RWendel@aol.com

Subject: MN ARES bulletin

NOTE: Please distribute as you see fit.

MN ARES SEC Gary Peterson N0ZOD writes:

Just wanted to fill you in on a conference I just returned from. I am
on the board of Association of Minnesota Emergency Managers and
act as a contact for the Association of Minnesota Counties with this
organization. The past week, AMEM has been meeting at their fall
conference and discussing a wide variety of issues.

I am pleased to report that Section Manager Randy Wendel appeared
on a panel with Gerry Nies N0NGW from Grand Forks and John Engel
WA0LPV of East Grand Forks, and myself. The topic of conversation
before the membership of Emergency Management Directors was
what the role was that Amateur Radio played in the floods of NW
Minnesota. ARES was given over 45 minutes to explain the
different functions that amateur radio fulfilled and what our
capabilities are to assist emergency services organizations in the
future

I am very proud to say that ARES is on the front plate for emergency
management in Minnesota. After the presentations I was approached by
many emergency management directors inquiring about how they would
reach their ARES Ec's in their counties to find out what we can offer. I
could go into a long involved description of the positive feelings I got,
but I can sum it up by telling you that the time is now to set up an
appointment with your County Emergency Management Director and tell
him that your ARES organization is there at his dispoal and you want to
work with him or her.

There is a feeling that we are facing another unsure winter and spring
and we should begin now to cultivate the respect of your local officials.

If your county director was at this conference, he has had a hint of ARES
capabilities and it is now your job as EC's and DEC's to gain the
confidence
of your local director. If you do not know who your director is call me
or
e-mail me because I have a complete list of all of them.

Amateur radio emergency services is also a focal point of AMEM warning
strategic planning. We are in the door!!! A couple suggestions:

1. Do not tell them we are coming in to take over and replace their =
system when it goes down. Tell them we can supplement, not replace, even
though we know we could provide many of the emergency services
communications.

2. Do not make promises you can't keep. Impress upon them, that it's
not just the ARES members from their city or county, you have the backing

of the nationwide ARRL Organization.

Lots of luck and let's get ready for assistance when needed locally,
statewide, or regionally...

-----MORE--------

Minnesota Section Manager Randy Wendel N0FKU writes:

Thanks to Gary for his involvement in getting ARES on the conference
schedule. Also tnx to Gary for showing the video he produced, =
10-minutes of Minnesota ARES including flood hams in action. Great job!

I had the honor in presenting an Emergency Commendation to Gary, xyl
Gladys (kb0tut), Gerry and John for their involvement in flood
communications. Over 200 emergency managers from around Minnesota
applauded their efforts.

Tnx to
Gerry and John for taking time to attend the conference!

-----MORE--------

Outgoing AMEM President Lowell Johnson writes:

The Outstanding Volunteer for Region III has devoted hundreds of hours
to ensure that communications were maintained at a level needed to =
accomodate all the agencies and missions in flood response and recovery,
and that*s just in the past year. He installed 10 radios in the Polk
County EOC
in preparation for the flood, some of which were his own and his own
cable and antennas as well. He went into East Grand Forks as the water
was claiming the City and installed radio transmitters, antennas and
receivers
to get the city*s communications back on line and it stayed on line
during the
entire event. He cancelled business for his own radio business so that
he
could volunteer on behalf of the community. During the most devastating
night of the flood and into the next several days, HAM radios that were
installed in the East Grand Forks and Polk County EOC*s were the only
communications available and all rescues and logistics coordination
between
the two were carried out on these radios. The "pont-to-point" nature of
cell
phones, even had they been operational, were inadequate to the task.

The Outstanding Volunteer in Region III is John Vik (KB0BSJ), Amatuer Radio Operator in Polk County (E.Grand Forks).

Outstanding Volunteer Service * Metro Region

As we all know the flooding this past year was a statewide event and it tested resources in many areas. The Metro Region was no different. When the Salvation Army established a command post at their Brooklyn Center office they needed reliable communications with their field units.

This called for amatuer radio operators to volunteer. Matt Stepaniak coordinated volunteers and services at the command post from April 4 to May 29. He worked nearly every day during that period and regularly worked 12 hour days. His scheduling and training assistance helped make the communications assistance from amatuer radio a success.

The Outstanding Volunteer Service for 1997 in the Metro Region is awarded to Mathew Stepaniak (N0TNL)

This could be true but then again perhaps a few/some/all of the 15
people who did not stay for an unscheduled session had other
commitments. Or perhaps it just shows that less that 1/3 of potential
no-code licensees are already interested in upgrading or that 2/3s of
the same group have no interest in advancing their skills and
knowledge beyond the minimum required under the current regulations.

>It will be interesting to see what your drop-out rate will be
>once they find out that it's not easy and how slow and
>cumbersome Morse really is ...

Here I assume Carl speaks of the eight who stayed for the CW session.
It would also be interesting to track the dropout rate for the other
15 potential licensees. What will their reasons be?

Kudos Scott, keep up the good work and hopefully the dropout rate will
be 0 out of 23.

I recently fried a couple of resistors and God knows what else, I am in need of the schematics so I can get the values of the dammaged parts. Can anyone help?
the items are labled on the board, perhaps if I make note of them, someone might know what they are?

TIA
Sean (N1WSC)

>contributed to the technical stagnation and general decline of
>technical competence in the service and that's BAD ...

Stevenson,

You didn't 'get screwed' out of SHIT. You 'got' what you 'paid for'. The
rules call for CW testing to obtain HF privileges. YOU made the
decision not to meet the requirements. YOU didn't get SCREWED out
of anything. You made your choice. Live with it and quit wasting our
time with your whining and trying to rationalize why you shouldn't meet
the requirements of the liscense.

If you spent HALF the time you waste here on the newsgroup bitching, in
learning the code, you'd be an extra by now (assuming you are as
technically competent as you try to convince us that you are). It's
getting boring.

You attribue endless derogatory remarks to everyone else, but the only
place we actually see them are in YOUR posts. Everytime anyone tries
to get you to back up any of your 'claims', you resort to mis-direction,
evasion and if that fails then attack your opponent on a 'personal '
level. You quote endless unsupportable 'statistics' and I haven't seen
any evidence that you've actually done 'anything' to try to get the

rules changed other then your endless diatribes against 'old fartz' (your term) which are in a great conspiracy to keep YOU from getting on HF. (Untrue, but not a bad idea in principal. Amateur Radio already has it's share of 'lids', on HF and we sure don't need another one).

The rules require that for 'privileges' on HF, that you pass a code test. All your pissing, moaning, crying, whining, and rationalizing why YOU shouldn't have to pass that test to gain the privileges isn't going to change that. LIVE WITH IT.

Amateur Radio is a hobby with endless intellectual, technical and physical challenges. Morse code is only one small piece of it and a pretty small piece at that. Many of my most satisfying accomplishments in the hobby have been made above 30Mhz. Some of those have required CW, some not. If the code is keeping you from enjoying the challenge of the hobby., then maybe you need to find another hobby.

QwikKep version 01.01 is now available for download at:

http://www.trucom.com/ppages/marty
ftp://ftp.kc6ufm.dyn.ml.org

This new version makes the following changes:

1) Makes a more rigorous check of the integrety of the input data files
to prevent problems due to editing and/or damage to the files.

2) Removes the pauses on errors and documents the returned error codes.

3) Cosmetic changes to the bulletin footers.

If you are using version 01.00 you should download the newest version.

Take Care & 73

And how archaic. Who among us has not seen a potential new ham's amused
look of
non-interest that arises upon his or her understanding of the Morse
requirement. Morse testing
is an embarrassment to the hobby.

I was interested in how many wannabe hams have any interest in
Morse at all ... apparently Scott's sample is about 1/3 ... but they
haven't had much of a chance to be frustrated yet ... some folks will
try jut about anything for a while ... others may simply have not wanted
to "offend" the instructor of their technician class by saying "thanks,
but no thanks."

After all, even amongst current, code, HF licensees, only 27% use
Morse "regularly" according to the ARRL's "survey" ... the remainder
said "never" or "rarely" ...

>
<snip>

Quick-Kep turned out to be a tasteless joke. It produces 46k bulletins DUPLICATING info you can and will get much faster, quicker, and more reliably via the genuine AMSAT bulletins. The enormous message size is there so Marty's "packet" bulletins will travel the Landline Lid "net" efficiently, but will tie up genuine amateur radio digital network links.

In other worfds, it's another LandLine Lid attempt to undermine amateur packet radio, this time by flooding the network with grossly oversized bulletins containing redundant, useless information.

What a jerkoid stunt. But then again, what more can one expect from one of TAPR's pet LandLine Lids? Marty devotes the majority of his time, it appears, to the ideal of convincing all hams to communicate via non-ham means of communication. That is, when he is not deliberately trying to cause widespread problems across the genuine ham radio digital net.

LandLine Lids like Marty use non-ham means to bypass and route around ALL known types of ham radio digital communications, and that most certainly includes AMSAT stations. -- If a LandLine Lid is allowed to move messages over the Internet which were intended to be moved by the AMSAT station, what is that AMSAT station supposed to do with no traffic? AMSAT stations are quite expensive to build and maintain, but of course a LandLine Lid's Internet access is dirt cheap.. Once it's been "routed around" thoroghly enough by the proliferation of non-hams like Marty Albert, no AMSAT station will stay on the air for long.

AMSAT: Beware of "favors" from LandLine Lids. Ask any HF forwarder what their "help" will do for (to) you.

Users of FBB BBS can set up their REJECT file to reject all non-standard and bogus AMSAT bulls like this:

R * * AMSAT * #* 0

This lets genuine AMSAT bulls through and rejects garbage, including KC6UFM's "Quik-Keps" and most other bogus AMSAT bulls.

>DDDDDDDDDDDDDDDDDEEEEEEEEEEEEEEEEEE-XXXXXXXXXXXXXXXXXXX
>into a microphone all day.

Yup. That about sums it up.

>when it has NO valid justification as a government requirement,o

It has no valid justification in *YOUR* mind. However:

1) We do have a treaty requirement for a sending/receiving morse test
2) It is in the government's interests to promote a common mode of operation
3) 40% of all amateurs do use morse code
4) CW is a major mode in DX
5) Most long-distance contact records are made using CW
6) Most experimenters use CW for their "short, controlled" transmissions.

These are just a half-dozen I can rattle off the top of my head, given I
just woke up.

>should I bitch and complain and debate and try to get the rules changed?

Why ask the question. Everyone knows your favorite amateur radio-related
activity is to get on USENET and bitch about code and insult other hams.
I doubt you've turned on a radio since you've discovered USENET.

>I believe that it is time for the thousands and thousands of us who feel
>that way to stand and be heard, rather than meekly submitting to such
>ridiculous hazing ...

Just think, another tidbit for your resume:

Carl Stevenson, Leader
Morse-Code Bolshevik revolution

>survival of the service that we fight ... and win ... this battle in the next
>couple of years ... otherwise, there will BE no ham radio to fight over ...

Right. With people like you promoting divisiveness. We have a codeless license. If you don't want to do code, you don't have to. But, it doesn't really matter anyway. Code or No-Code, the moment someone shows up with $50 Billion dollars to buy spectrum currently assigned to amateur radio, you can bet the government will be richer, and you'll have a useless radio.

Hello Dennis,

Are you aware that amateur radio already has a license specifically
designed for you -- its called the "Technician" license, and all it
requires is that you pass two, 50-question total, theory examinations
to get on the radio and operate. No morse code test is required. Your
local Radio Shack should have applicable study materials. Depending
on how much entry-level radio information you already know, you could
be "on the air" in as little as a week!

Now, in response to your "Theory is interesting, Morse is boring"
summation:

You're absolutely right. For you personally, you said it yourself
"...begin the person that I am I would consider learning the technical
aspects...interesting".

But, let me pose a question to you: what if you are the type of person
who doesn't find the "technical aspects" at all interesting? What if
you are the type of person who sees the communications utility of
amateur radio and you wish to capitalize on that? What if you are
a Red Cross volunteer, and would like to work with the RC group that
interacts with hams on several "emergency nets" during times of crisis?

For example, I use night-vision binoculars for covert surveillance.
Should I need to understand HOW they work before I can use them?

For those who do not find the "technical" aspects interesting, should
they be tested on those technical aspects? Isn't that a "waste of time"
and "jumping through a hoop", as you said above, in their case? Regardless
of your answer, I want to know "why" you feel one way or the other.

There are many aspects to amateur radio. Code is just one aspect. If
you choose not to do it, that's fine -- the Technician license class
offers access to 99% of all amateur radio frequencies, with full-power

(as high as 1500 watts) and no "special" restrictions. You can do the "usual" things people do -- talk to other hams about topics of interest, interface your radio to your computer and get on "packet" -- or you can do some "unusual" things, like operate microwave links, use the moon to bounce your transmission to another part of the world, or try to make another "world record" "long distance contact" (well, okay, maybe not that one, since its usually done in morse code -- but even techs can use morse code if they want to, even though they haven't officially been tested in it!)

Point is, you get out of amateur radio what you put in to it. Don't look at this newsgroup as a reflection of amateur radio. Its too laden with people whose favorite amateur radio-related activity is to get on the computer and insult other hams while complaining about the code "requirement".

4937. Help needed on RCI 2950

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-28 00:00:00 UTC
From: Tony Hance <kryten@humanoid.net>
Message-ID: <01bccc16$d8856960$b35fa5c2@tonhance>
Source record: 189777

Hello all !

My RCI 2950 has a problem. The Send and receive frequency on AM/FM has shifted about 2.5 kHz all by itself.

I now need to use the SPLIT option to be able to be on the right frequency for people to hear me loud and clear.

Now comes the strange part:

On SSB it all works fine withe frequency shift. No problems there.

I never have been tampering with this radio so the freq shift cannot be my own fault.

Any one know how to overcome this problem???

I do not login to news groups very much, so please be so kind as to send me a reply to my email adress if you will.

kryten@humanoid.net

Thanks in advance.

4938. Announcing BeaconClock 2.0/1.08

BeaconClock is FREEWARE for DXers!

Two new versions of BeaconClock are now ready for download from the KaWin/SA Watch Home Page - URL below .

For Win95/NT users only, BeaconClock 2.0 is a new native executable code version. Download and install the NEW RUNTIME files, RUNTIM97.EXE, before attempting to install BeaconClock 2.0.

For Win3 users, BeaconClock 1.08 fixes two bugs.

Both versions correct the LP headings in the "List" and permit entry of Lat/Lon information using either the "." or "," as the decimal indicator, depending on your system's "Regional" settings.

73 and DX,

Interesting logic. But I doubt that the schematic has been drawn to
intentionally obfuscate.

If you were to obtain the service manual for this rig, and if is done as
well as the IC-781 manual is for instance, you would find a clear
exposition which covers many "sectionalized" schematics which may take
some time to understand, but not because somebody is trying to pull the
wool over your eyes. Its quite too complicated for one small schematic
to give you a clear picture.

Simply because 1) it's necessary to demonstrate that you know enough
to operate safely and in compliance with the rules ... and 2) because
ham radio is *supposed* to be a TECHNICAL avocation ... it is meant
for those who want to tinker, build, experiment, and learn ... NOT just
to be another personal radio service for folks who don't give a shit about
radio technology ... the ARRL has promoted the competitive games
and DXing thing to the point where they have perverted ham radio into
something VERY different than its charter purpose ... if we don't get it

back on track, we'll be dead meat before 2010 ... many of us don't want
to see that happen because of clinging to "tradition" and religious dogma
WRT the mystical powers of Morse ...

> when all I want to do is plug in my Yaesu, connect it to a store bought
> antenna and yell CQ DX? Why not just stand at the local Ham radio outlet
> and hand licenses out?

Because it's not CB ... despite the fact that many of you act like it ...
you sound like you really belong more in one of the personal radio
services like CB, GMRS, or FRS ... they are not technical and don't
require any technical knowledge ... they are specifically for "yackers" ...

> > I choose the latter avenue ... it is clearly not the easiest one ... but I

>
> Yea right Carl. Why aren't you forming the No Technical Examine group?
> After all that technical stuff with all those formulas are just a waste
> of time to learn too!

I have steadfastly stated that I favor more rigorous technical examinations
as well as the elimination of the Morse hazing ritual ... as I said before,
we need to get ham radio back on track before the FCC pulls the plug on us.

> 10-4 good buddy?

Why the question mark??? From your " when all I want to do is plug in my
Yaesu, connect it to a store bought antenna and yell CQ DX?" it would
appear that that is YOUR line and lingo, it's certainly not mine ...

I have a grand total of ONE QSL card ... from a dear friend in Washington ...
so you and MD are way off base when you imply (or, in MD's case, outright
claim) that I "just want to get on HF so I can yell CQ DX into a mike ...").
I am not saying that I would refuse to talk to foreign stations ... just that
chasing DX and "collecting wallpaper" are below the noise floor relative to
more productive interests such as experimentation, learning, and improving
technology for HF communications to me ...

I have a six-footer that I no longer use that I'd be willing to part with for $25.00, and I could even probably take it to you (I have a pickup). I believe I still even have all of the mounting hardware for a roof-mounted pipe mount, but I'm not absolutely sure. It was originally used as an SCPC audio receiver, and I believe it's made by Prodelin. I also have a 4 GHz feed and LNA I'll throw in. Let me know if you're interested. It's presently in my backyard in Newark.

How does knowing the technical nitty-gritty about slow-scan mean I'm going
to "operate safely" if I have no interest in operating slow-scan?

>and 2) because
>ham radio is *supposed* to be a TECHNICAL avocation ...

The definition of amateur radio, as codified in Part 97.1, mentions
communications *ART*, not communications *SCIENCE*. Technical aspects
plays only one, not an exclusive, role in amateur radio.

>the ARRL has promoted the competitive games
>and DXing thing to the point where they have perverted ham radio into
>something VERY different than its charter purpose ...

This shows how little Carl really understands about amateur radio.
"Competitive games" and "DXing" are two aspects of many in amateur radio.
However, both of these activities promote "technical" aspects, by
encouraging more efficient antenna design, greater study and understanding
of atmospheric events that affect propagation, more challenging contact

attempts using lower power, and so on.

Carl thinks "DX" means getting on the radio and screaming
"SEEEEEEEEEEEEEEEEEEEEEEEEEE-QQQQQQQQQQQQQQQ DDDDDDDEEEEEEEEEEEEEE-X"
into a microphone, because that is exactly what he wants to do, and
can't, because he hasn't passed a 13wpm code test.

>... just that
>chasing DX and "collecting wallpaper" are below the noise floor relative to
>more productive interests such as experimentation, learning, and improving
>technology for HF communications to me ...

Which, in the past 20 years of being a licensed Tech-Plus operator
with HF privileges on 10 meters, you've yet to contribute a single,
solitary "technical achievement" to amateur radio.

My only advice to Larry is to have fun with Ham radio, but he sure won't find it by paying even an iota of attention to Stevenson The Whiner, nor any of his supposedly hi-tech friends. They are somehow against having fun & seem to somehow equate that with morse code. I would strongly suggest he just end it all, take Shannon and Nyquist and all their writings and desciples and stuff them where the sun doesn't shine, after which he too can crawl in and slam the door behind him. Hopefully the handle will break off.....

Randy-

Skip applying for a ham radio plate & instead apply for vanity plates.
Use that call as the number for the vanity plate. You will be assigned
your dad's old callsign on the license plate. Then take your
dad's old plates & put them on. No one will ever know, & you will
be displaying the correct license plate number.

I've played this gave a few times. I have my callsign on 4 different
car license plates. I did it by licensing in four different states.

Randy or Vanessa Carlson wrote:

Where in Part 97 does it say I can't send my radios back to Yaesu for
repair? There is no requirement to "build, tinker with, or otherwise
adjust" ANYTHING in amateur radio, unless you so choose.

And, geez, where do we find 7360's nowadays?
Those were tough enough 10 years ago!!!

"William E. Sabin" <sabinw@crpl.cedar-rapids.lib.ia.us> wrote:

> You don't make a receiver better by
>throwing more tubes into it.

Bingo. The more tubes, the more noise,the tougher
it is to align. The idea is to get the max gain
and lowest noise out of the fewest stages.
One of the nicest things about tubes is that they
tend to force people to choose the simplest designs.

>With vacuum tubes, more is not better. With RF integrated circuits the
>exact same thing is true.

I am a tube salesperson, so I cannot comment knowledgebly
re RF IC's.
I will say that the *good* ham & SW gear that was made
back in the old days involved a considerable handwiring
(uggh, check out some Hallicrafters' bandswitches, yikes!),
and could not be duplicated these days for less than
6X to 10X the price. Them ol' National HRO's sold
for $359 new in 1951!

BTW, we have a good deal on Russian 807's
if anyone's interested. Check out:

What are you talking about? Are you crazy? In the United States CB is about as clean as the bottom of a Mc Donalds' dumpster sitting in a manure pile in the city dump!! If CB ever gets back any quality or class anything near of Ham Radio, I'd be amazed.

Just because CB isn't formally licensed, doesn't mean the operators can be as mature as many licensed in Amateur Radio.

The important point, which pro-coders continually choose to
ignore, is that nobody should HAVE to "have a get out of Morse
free" card today, because Morse should no longer be a
"requirement" ...

> The no-code license is a GREAT entry-level license. Yes,
> Morse code CAN be tough to learn, but it's certainly not hard
> for most people. It's more a question of desire and the ability
> to expend effort to learn something new.

Or, to many people, it's more a question "am I willing to waste
a tremendous amount of my valuable time learning to do something
that I have NO interest in and NO desire to use and NO intention of
EVER using, just so some olde fartz can be happy that they made
me jump through their silly hoop? Should I submit meekly to being
forced to accept what amounts to someone else's religious preferences,
when it has NO valid justification as a government requirement, or
should I bitch and complain and debate and try to get the rules changed?

I choose the latter avenue ... it is clearly not the easiest one ... but I
believe that it is time for the thousands and thousands of us who feel
that way to stand and be heard, rather than meekly submitting to such
ridiculous hazing ... I also believe that it is VERY important to the future
survival of the service that we fight ... and win ... this battle in the next
couple of years ... otherwise, there will BE no ham radio to fight over ...

I suggest you check news reports about traffic stops along I-10 in Louisiana, or police confiscating money from travelers at airports if the traveler pays for a ticket in cash and is carrying lots of cash. Forfeiture law doesn't require that the police prove a crime was committed with an item, or that a crime was committed to obtain the item. The police only have to establish reasonable cause to confiscate the items, and then it's up to the property owner to establish that no crime was committed at the owner's expense.

I also note that amplifiers at least for CB are illegal in the U.S., the FCC should probably send US Marshals to confiscate the items when they are auctioned, as they aren't type accepted. One can't sell drugs legally that have been confiscated, there is no reason why an illegal amplifier should be sold either.

Hello,

I might be sticking my nose in where it does not belong. But I have no radio license as a ham. I have one that goes with flying a small private airplane. And yes all I learned for that was proper etiquette in using the radio. Seems like enough if you ask me. I even think some equivalent for ham radio at a starting level is fine.

I have considered getting into ham radio. And being the person that I am I would considering learning the technical aspects of how the equipment works desirable and interesting. And not a waste of time. But I would say that to me with many responsibilities elsewhere, that I would view time spent learning Morse code to be a waste of time. Not having learned it I don't know how much time would be involved. But I would only be "jumping through a hoop" as another put it so well. And as soon as possible would want to move on to voice or some other radio activity. And no one is saying they wish to stop others from using Morse if they wish. Some just don't wish to be forced to know it for the benefit of another's sense that one has really earned his license. I see no practical need that one know Morse before having a license. We all got better things to do in my opinion.

My 2 cents,
Dennis

SB DX @ WW $OPDX.324
Ohio/Penn DX Bulletin No. 324

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 324
BID: $OPDX.324
September 29, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & WB2RAJ The 59(9) DXReport, W3UR & The Daily DX, WA4FFW, N5FG, K7ZD, OH2/K8MN, NN9K, AC0X, CT1EAT, DJ1US/5X1S, G4BUE & DX News Sheet, G0PSE, OZ5AAH, T77WI, TA3YJ & TA3J, VK4AAR and ZS6Y for the following DX information.

5X, UGANDA (Update). Steve, DJ1US, reports he has finally received his 5X license that he applied for on July 27th. Look for him to be active as 5X1S. Steve states to please be patient with the QSLs - they are not printed yet. QSL to DF2RG via the bureau or direct to: Gerhard Jaeger, Ruhseugstr. 6, 92421 Schwandorf, Germany. ADDED NOTE: For those of you who would like a Uganda stamp, Steve's Ugandian address is: Stefan M. Bauer, TSU, c/o UN WFP, P.O. Box 7159, Kampala, Uganda (but don't expect an answer until late October or so!).

A5, BHUTAN. The "DX News Sheet" reports that well known DXer Jim, VK9NS, is having a visa application being processed, and he will be meeting the Bhutanwese Ambassador to Bangladesh in Dhaka. For those who do not know, Jim was previously active from Bhutan in 1990 as A51JS. KYFC!!!! ADDED NOTE: Jim has renewed his S21ZA licence and may be active from Dhaka after his visit to the UK while attending the RSGB HF Convention.

C5, THE GAMBIA (Update). It been reported that Mako, JA1OEM, had to postpone his September 25th, C56/JA1OEM operation as he was unable to obtain a visa.

FO0, MOOREA ISLAND (Update). Giancarlo, T77WI, has received the callsign FO0MOT to activate this Polynesian island (OC-046). Activity will last until October 12th. Refer to OPDX.323 for more details.

GB0, LUNDY ISLAND. The Taunton and District Amateur Radio Club (TADARC) will be activating the special callsign GB0LI on Lundy Island (EU-120) from September 30th to October 6th. Activity will be on 160-10 meters with operations on CW and SSB. They plan to use IC-725 and IC-735 with

100 watts to R7000, wire dipoles and Long Wire. Operators will be G3WNI and G0PSE. QSL to G3WNI or G0PSE via bureau, or to the following addresses:
G3WNI - Bill Lindsay-Smith, Way Close, Madford, Hemyock,
Devon EX15 3QY, England.
G0PSE Tom Taylor, 19 Derwent Grove, Taunton,
Somerset TA1 2NJ, England.

JY, JORDAN. "The Daily DX" reported that King Hussein, JY1, made a very rare visit to the bands this past week. His Royal Highness showed up on 14280 kHz at 2100z. QSL via WA3HUP.

KH4, MIDWAY ISLAND. By the time you read this, the Midway-Kure Dx Foundation team should be active from Kure as K7K, but there are also plans for a very brief operation from Midway Atoll just after the team returns from Kure. Their tentative plans are for the team to operate on Midway from October 5th and 6th only. The special callsign for the Midway operation will be K4M (Kilo 4 Mike). QSL via KE7LZ.

QSL INFO AND NEWS.....
R1ANZ QSL INFO. Alan, VK4AAR, reports that lately several DX bulletins have provided the wrong QSL information for Wally, R1ANZ. Alan has spoken with Wally many times, and he gives his home callsign for QSLs :--> UW1ZC (***NOT*** RU1ZC). His mailing address is: V. N. Mykitenko, Akademgorodok 2-1, 184340 Loparskaya, Murmansk, Russia (Wally added "Murmansk" as it helps the postal people). By the way, Wally's XYL, Natalie, is handling QSLs until Wally returns home.

KH4/KH7K QSL UPDATE. Mac, WA4FFW, reports that with the help of WJ4T, all QSL cards received to date, including bureau cards, have been processed for the N4BQW/KH4 (Midway) and N4BQW/KH7K (Kure) operations. All cards were mailed 9/20/97, and most should be received as you are reading this. Anyone who does not have their card after 2 weeks needs to resubmit. Mac states he will begin processing cards received for the recent Tern Island (N4BQW/KH6) operation. They will be mailed within the next two weeks.

NEW QSL MANAGER. Pete, NN9K, reports he is assuming the QSL Manager duties for V51MA, Mike Alberts, starting with contacts made after September 15, 1997. His address information is as follows:
Peter E. Beedlow, NN9K, 741 Greenway Avenue, Colona, IL 61241-9337

WRONG ADDRESS. Lou, AC0X, reports that the address for TY1IJ's QSL Manager DK8ZD is incorrect on the Buckmaster Callsign Lookup WEB page (it gives a "Moss Beach, CA" address). Cards sent to that address get returned by the post office. The correct address is: Jochen Errulat, Berlinerstrasse 31-35, D-65760 Eschborn, Germany. This address is from the DL5MO QSL Manager WEB page:
http://www.systemtechnik.tu-ilmenau.de/ham/qsldb_gate.html
A card sent to that address with a SAE and 2 green stamps resulted in a card in about 2 weeks.

Dave, OH2/K8MN, in downtown Helsinki, reports to OPDX he just returned late Thursday night from the midweek OH0/K8MN trip to Brando Island. The island is part of the Aland archipelago (IOTA EU-02). A couple of thousand QSOs were made on SSB and CW on 80 through 15 meters. If you made the logs, QSLs can be obtained (U.S. with SASE, rest of the world with IRCs) from WA8JOC. His address is: Ken Scheper, 5875 Cedaridge Drive, Cincinnati, OH 45247 U.S.A.

S9, SAO TOME & PRINCIPE. Francisco, CT1EAT, reports to OPDX that he will be in S9 from October 21st until November 4th. His planned operations will begin from Sao Tome Island (AF-023) from October 22-30th, using the callsign S92FC. Activity will be on 80-10 meter including the WARC bands with operations on SSB, RTTY and RS12 satellite (Mode K). Francisco has requested the special call S97A to operate during CQWW DX SSB Contest only. He plans to be a Single/Op/Multi Band LP entry. Outside of the contest he will concentrate on RTTY. This will be his first time on this mode, so PLEASE be nice. Francisco reports that the RS12 satellite is currently in mode A (as of Sept. 28th). So, if it doesn't return to Mode K, no operation will be possible. From October 31st to November 4th, Francisco will go to Principe Island (AF-044) and use the callsign S91FC. Operations will be SSB only with activity on 20-10 meters including the WARC bands. His equipment will be a FT890 (100w), R5 and dipole. QSL all callsigns (S91FC, S92FC and S97A) via the CT Bureau (REP) or direct to: Francisco Costa, P.O.Box 172, 7800 Beja, Portugal. SPECIAL NOTE (from Francisco): "If I 'disappear' during a QSO, it will be almost sure due to lack of energy. Energy failure happens several times a day... Also, this isn't a Dxpedition. I'm going on holiday and I'll take my radio with me. I'll only be on the radio a few hours a day..."

THE 1997 MAGNOLIA DX ASSOCIATION'S DX FORUM AND BREAKFAST will be held in conjunction with the MS. Coast Amateur Radio Assoc. Hamfest. The dates for this year's DX activities will be on Saturday, October 11th, in Biloxi, MS. The DX breakfast will be at the Lady Luck Casino, located on Casino Row, at 7:30 AM. The speaker will be Bill Musa, K5YG, with details about his trip to VP5 land. If you wish to attend the DX breakfast and want details please E-mail Floyd, N5FG, at: floydgee@datasync.com
The DX forum will be at 2PM. The speaker for the DX forum will be Rick Roderick, K5UR, the Delta Division Director. The subject will be DXCC 2000...

TF, ICELAND. Preben, OZ5AAH, will be active here October 26th through November 10th as TF/OZ5IPA. The callsign OZ5IPA is the club callsign of the IPARC (International Police Association). Preben is the chairman of the association. Priority of operations will be CW, WARC and low bands. QSL via home call.

TR, GABON. "The 59(9) DXReport" states Jean, TR8XX, is regularly active on 40 meters at 0600z, then QSYs to 30 and 20 meters.

YM3, TURKEY (Special Event). Look for "YM3SV" to be active starting 0000z Saturday, October 25th and ending 2400z Friday, October 31st. This station is commemorating the "Friendship, Neutrality, Reconciliation and Arbitration Agreement" between Turkish and Greek Rebuplics. This agreement

was signed by Turkish President Mustafa Kemal ATATURK and Greek Prime
Minister, Eleutherios (Kiryakos) VENIZELOS on October 30, 1930, in Ankara.
In accordance with the authorization from the Izmir Directorate
Radiocommuniciation, TA3YJ, TA3J and possibly others will be active from
the TA3YJ amateur radio station with the special callsign YM3SV in low power.
Activity will be Phone only on 80, 40, 20, 15, 10, 2 meters and 70cm.
QSL via TA3YJ, Nilay Mine Aydogmus, Box 876, 35214 Izmir, Turkey

ZS9, SOUTH AFRICA. Be looking for ZS6Y to activate the callsign ZS9F
during the CQWW SSB Contest at the end of October. Activity will be
on all bands. QSL to KK3S via the bureau or CBA.

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX
Bulletin) take note, the area code has changed as of August 16th. The new
440 area code will replace the 216 area code. Currently both area codes
can be used, but the 216 area code will be permanently replaced in April,
1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 440-237-8208 28.8k/14400/9600/2400/1200 and leave a message with
the Sysop or send InterNet Mail to one of the two following addresses:
kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 440-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

It's a hobby which happens to have service aspects.

>1) We do have a treaty requirement for a sending/receiving morse test

That can and will change. In the meantime, many countries have found
ways to circumvent the requirements.

>2) It is in the government's interests to promote a common mode of operation

No it isn't.

>3) 40% of all amateurs do use morse code

I'd love to see you prove that. I'd be surprised if the actual figure
is half that.

>4) CW is a major mode in DX

So?

>5) Most long-distance contact records are made using CW

So?

>6) Most experimenters use CW for their "short, controlled" transmissions.

Unproven. Even if true, it, like the two above, is no justification
whatever for REQUIRING code to get a ticket.

>These are just a half-dozen I can rattle off the top of my head, given I
>just woke up.

No doubt when you're fully awake, you can come up with some _rational_
arguments. Only one of those has any validity at all.

Hello,

First, Congratulations on your new liscense.

Second, Cudos to KF2T's fine response

Third, Each repeater and simplex frequency has different people that
operate and expect certain protocol, Listen first.

Lastly, I've only been a ham for a few years, but I got involved, I've
been the Net Manager for our SkyWarn Net, Hamfest Director, Hosted a
state convention, and a VicePresident for our local club. All within
the first 5yrs of being a ham.

Have fun, it's all that you make it. cul es 73, Jack

Dennis,

I find that Morse proficiency helps me significantly as a pilot in being able to quickly and easily identify Navigation Aids without having to go back and forth to a chart and try find the 'dots and dashes' and try to remember them while I'm trying to hear the VOR or beacon Id. This becomes increasingly useful when flying IFR and having to manage additional other cockpit tasks and keep up an instrument scan at the same time.

Well, Art, I don't know about law in LA, but I do know a little bit about
law in the Northeast, and up here forfeiture requires probable cause that
a crime has been committed.

Now, of course, this doesn't stop the jack-booted thugs with coats
emblazoned with three initials on the back from stopping an otherwise
law-abiding citizen and confiscating his money simply because he
happened to have cash on him, or murdering innocent women and children
in their zeal. Naturally, at that point, its incumbant upon the citizen
to spend money to protect his rights, which, unfortunately, the middle
class and poor cannot do.

However, in the "war on drugs" (more aptly named the "war on civil
rights"), the complacency of the populace has allowed agencies like
this to exist. Until overwhelming public outrage exists in sufficient
quantities to force our elected officials to enact legislation or take
other actions to rein in these out-of-control zealots, I'm afraid
abuses will continue.

Hopefully, the American people will wake up before everyone has to
goose-step in unison.

I have listen (watched?) you people blather about code v. no-code for a couple of weeks now .. and the only thing that has changed is the headers ... and that but precious little..

Have you people looked over in r.r.a.a.? There was someone over there asking how to make an antenna for 40 meters so he could practice his code ... apparently did not know how to make a dipole ...

Now.. since this person is (hopefully) at least a Novice ... how the heck did he get a license without knowing the fundamental equation for an antenna and the concept of a dipole?

Once you have that out of the way ... explain how this relates to the code requirement?

And what the heck does that have to do with the number of people killed in Ted Ks car?

NOw can we get on to something really meaningful? Like IBM clones v. MACs?

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

73,

John Seney

So why isn't morse proficiency a requirement to be a pilot?
The fact that morse is used for navigational beacons does
not support in any manner the morse test for HF licenses.

4971. Hammerlund Roberts HiQ receiver questions?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-29 00:00:00 UTC
From: Jim McKinnon <radiola@ihatespam.com>
Message-ID: <60oatf$sv8@winter.news.erols.com>
Source record: 189462
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

I just picked up a Hammerland Roberts receiver. It uses 5 - 01a's. It looks like a kit but has a nice engraved panel. It is also in a cabinet with a gold decal that reads that the cabinet was built to Hammerland Roberts specs. I have an AC Super wasp in the same cabinet. Does this set use plug in coils? The only coils in it are the ones on the tuning caps. Is the set a boat anchor or does it have a little value as the Superwasps and SW3's do? Sorry about my questions, but I collect mostly early 20's broadcast receivers.

Thanks,
--
Jim McKinnon

Unfortunately, there was an unplanned change of
IP numbers for the systems and the DNS entries
take time to propagate. You can get in to some
degree using the IP number as shown below.

Everything will be back to normal (except new IP
address) as soon as things get updated around the
world...

QSL/QTH.Net are up and healthy, just not as easy
to access as desired.

-Brian

It's a great rig. I've had mine for almost two years without any problems. The noise blanker isn't as effective as one might hope, though.

Check:
http://www.jyu.fi/~pjka/IC-706/

for reviews and mods information.

Unfortunately, there was an unplanned change of
IP numbers for the systems and the DNS entries
take time to propagate. You can get in to some
degree using the IP number as shown below.

Everything will be back to normal (except new IP
address) as soon as things get updated around the
world...

QSL/QTH.Net are up and healthy, just not as easy
to access as desired.

-Brian

Ok, I would have not seen this if I had not seen this thread in
Rec.Radio.Shortwave. While it affects shortwave listeners, I
believe that this should have been posted in other groups. Like
Rec.Guns were replies of a political nature as reposted in
Talk.Politics.Guns, it might make sense to redirect political discussions
to Rec.Radio.Amateur.Policy and Rec.Radio.Amateur.Misc.

Now would someone like to restart this discussion so the rest of us
can get in on us? What is happening with Rep Tauzin? Look this affects
law enforcement, firefighters, news gathering as well as us hobbists.

BTW, it seems like all my hobbies are under attack by the
Prohibitionists. I really got into hobbies to get away from my political
responsiblities (I am an elected official).

ZCZC AG57
QST de W1AW
ARRL Bulletin 57 ARLB057
From ARRL Headquarters
Newington CT September 29, 1997
To all radio amateurs

SB QST ARL ARLB057
ARLB057 Doug DeMaw, W1FB, SK

Acclaimed ham radio icon Milton F. ''Doug'' DeMaw, W1FB, died September 28. He was 71. One of the most widely published technical writers in Amateur Radio, DeMaw was diagnosed with leukemia earlier this year and had been in failing health in recent weeks.

DeMaw was first licensed in 1950 as W8HHS. An electrical engineer, he was a member of the ARRL Headquarters staff for 18 years--from 1965 to 1983--and served as Technical Department Manager and Senior Technical Editor from 1970 to 1983. During his tenure at HQ, DeMaw served as editor of The ARRL Handbook. In 1970, he engineered the shift in emphasis toward solid-state design in QST and the Handbook. He has hundreds of articles in QST and other publications to his credit. DeMaw also was founder and publisher of VHFer Magazine. (His wife, Jean, W1CKK, also worked on the Headquarters staff.) DeMaw was a life member of the ARRL and a senior member of the IEEE.

After retiring to the family farm in Luther, Michigan, he was elected chairman of the Lake County Board of Commissioners and continued to write books and articles. He also tried his hand in the Amateur Radio business as proprietor of Oak Hills Research. Among his other books, DeMaw wrote W1FB's Design Notebook, W1FB's QRP Notebook, W1FB's Antenna Notebook, and The ARRL Electronics Data Book, which remain popular. In recent years, DeMaw also penned a regular column for CQ magazine.

A former ARRL colleague, Membership Services Manager Chuck Hutchinson, K8CH, counted DeMaw among his friends. ''Doug loved to experiment with circuits and antennas. He also loved to encourage others to try their hand at building,'' he recalled. Hutchinson said DeMaw not only wrote prolifically about ham radio but also about gardening, another of his avocations. ''He was an avid gardener and cook,'' he said. DeMaw also was an outdoorsman and hunter. ''He

loved to hunt with bow and rifle--both modern and muzzle loader. He was very good at throwing a knife or hatchet,'' Hutchinson said. Paul Pagel, N1FB, also was one DeMaw's colleagues during his days at ARRL HQ. ''Amateur Radio benefited greatly from his work,'' Pagel said. ''He was a multifaceted man. I doubt there was anything he couldn't do if he set his mind to it.'' Jerry Hall, K1TD, who also worked with DeMaw during his years at HQ, called DeMaw a writer of ''uncanny'' ability. ''Doug could write it once, and it was done,'' he recalled.

Survivors include DeMaw's wife, Jean, and a son, David, N8HLE, a technical writer who lives in Connecticut.

This is telling you the VCO is unlocked. When you go in there,
you'll find Kenwood poured goop all over the board in this
area. Dig it out and get rid of it. It has become conductive
with age and is screwing your VCO. This is a known problem.

Well I don't know about Indiana's state laws, but in florida a sheriff
is an elected offical and even if a local judge wanted to issue a bench
warrant to pick him up for lets say for not showing up for some type of
court hearing the judge would still have to go though the governers
office in order to susspend the sheriffs law enforcement powers before
they could pick him up for contempt of court, this happend in broward
county about seven years ago in some type of law sute case the sheriff
then was nick nevorrow, made his mind up that he had better things to do
and did not show up in court, the judge then was trying to issue a
warrent for his arresst but found out that no one would do a pick up
order untill the governer of the state sussended him, it got to the
governers office and the governers comments to the judge were that the
court failed to show malace on the sheriffs part so the judge's pick up
order went right down the tubes

Well, many of us have done as you sugggest (although I have not forgotten
it. I use it). It's just that after it was over and done with, I was
left to wonder what was proven by the exercise.

>I learned 5 wpm code in 8 weeks, 10-20 >minutes a day, while driving my
>car to work, using farnsworth method tapes.

Certainly you cannot say you worked hard to learn the code, so you
shouldn't be able to say that you have "earned" as much as someone who
worked for years to achieve 20 WPM. And yet you can claim to have earned
the same as they. Point being, it's not a matter of earning something at
all; it's simply a matter of qualifying for something.

Some of us here are re-examining these qualifications.

Hello,

Does anybody out there know a good unidirection antenna design for
transmission purposes (as opposed to receive). I basically
need to transmit in front of me, none to the rear and very litte
to the sides. Is there also some way to vary the angle of how
much is transmitted to the sides? I need to transmit a 433MHz
signal into a 50 ohm unidirectional antenna.

Any help/suggestions/comments would be appreciated.

Thanks in advance!

Perhaps that is true ... not everyone who is professionally involved
will become a ham ... but many would, were it not for the archaic
code "requirement" ... and the loss of those hundreds is OUR loss
and it is a tragic loss of skilled contributors to our service ...

While we will not recruit EVERY engineer and technician in the
radio and computer fields, we will recruit FAR MORE of them
without the code hazing ritual ...

I just obtained a Hy-Gain DX88 10-80m vertical antenna at a local swap meet and am getting conflicting information about this antenna. I have been told that radials are not needed if it is mounted higher than 25 feet. I have also been told that radials are required. I plan on mounting this antenna on a chimney mount at about 35 feet. Perhaps someone who is familiar with this antenna can clear this up for me. Please e-mail me at jsollows@bigfoot.com. Thanks for your help.

> believe there should be a Morse requirement. Perhaps there are some
> others reasons?

Aloha Dennis,

You have hit upon the reason already, it is in the ITU defining
paragraphs
of the international Amateur Radio Service"

"Treaty, in Article 1, ITU "International Radio Regulations",

Article 53: Definitions--"Amateur Service: A radio-
communications service for the purpose of self-training,
intercommunications and technical investigations carried out
by amateurs, that is, by duly authorized persons interested in radio
technique solely with a personal aim and without pecuniary interest."

Note th word "and" conntecting the two words "self-training,
intercommunications" with "technical investigations" by
duly authorized persons "interested in radio technique",,,

The purpose of amateur radio is MORE than just talking to
other people on the radio!! And the teaty has in mind that
any one of these duly authorized individuals should have
the ability/willingness to exchange contacts with any other
authorized person; for the authors of the treaty, the least

expensive, most world wide common utility mode for
this purpose was CW; so they put it into the treaty.
Amateur radio is INTENDED for people interested in
the technical aspects and the various modes of intercommunications,
of which, the CW mode seems the least expensive to set up,
and of very wide spread use throughout the world, so they
put it in the treaty.

And our own Congress put the following words into the US
Telecommunications act, Part 97 The Amateur Radio Service,
along with the CW requirement:

"97.1 (c) Encouragement and improvement of the amateur service through
rules whick provide for advancing skills in both the communications and
technical phases of the art.

97.1 (e) Continuation and extension of the amateur's unique ability to
enhance international good will."

97.1(e) implies the US amateur's willingness, and prepardness, with
CW if necessary, to communicate internationally with any other
"duley authorized person" using his CW mode as an act of enhancing
international good will; not saying, "Well I don't want to talk to
him,
he is just using CW and running low power that is pretty tough for
me to copy at that, so I won't amswer him!" Such is contrary to
the spirit and intent of amateur radio.

Just my $.02, many DO NOT agree with this view at all!!

5008. Question: can I mount a 2M twin-lead J-pole in PVC pipe?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-29 00:00:00 UTC
From: David Barnes <david_barnes@hp.com>
Message-ID: <343042CF.743A@hp.com>
Source record: 189586

I've seen lots of plans for a j-pole made of 300-ohm TV twin-lead wire. Easy to make, very cheap (almost free) and portable. I heard that you can stick this thing into thin-walled, half-inch PVC pipe, put a cap on one end and, voila, a waterproof, sturdy vertical antenna, suitable for mounting on a roof or trailer or whatever.

Is this true? Is there any performance degradation with the PVC? Do I need to trim/tune the j-pole differently since it's inside PVC? Will it work for my 2-meter mobile rig, up to 50 watts?

Is the twin-lead j-pole the same performance as one of the rugged j-poles that you can buy?

5010. Re: CW--It's all My Fault

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-29 00:00:00 UTC
From: Dennis Moore <dennis.moore@postoffice.worldnet.att.net>
Message-ID: <343017A7.36BF@postoffice.worldnet.att.net>
Source record: 189588

This starts with a snippet from e-mail I received from Mr. Rosenfeld
and my reply follows.

Scott Rosenfeld [NF3I] wrote:
> It truly must
> come from inside, and once the bug has bitten, you do what's required.
>

Hello Scott,

Yes I agree with you that it must come from inside. Either the bug
bites a person or it does not.

However, in any endeavor that limits the people taking part by having
minimum requirements there are a few things we know. For one if you
remove or ease one of the requirements then some people take part who
could not or would have otherwise done so. Will removing the Morse code
requirement cause additional people to become licensed? I think the
answer is obviously yes. Will it cause a huge increase or a small one?
I think a small one, maybe so small you would hardly notice.

So should Morse be required or not? Is it a requirement that usefully
keeps out people who should be kept out for sound reasons or is it just
leftover from past times? Admitting that not being a ham I may not
fully understand the situation, it nevertheless seems to me that there
is little useful reason to require Morse code.

I would not be in favor of abolishing all requirements. An example of
the result of that would be CB, and a garish, awful example it is. I
understand, I think, the usefulness of excluding those that don't have
some grounding in basic theory and practice of radio operation. I see
no need to change those requirements.

It seems to me the main practical reason for employing Morse is to
communicate using the simplest possible equipment, with the least amount
of power, over the greatest distances. I see the aesthetic elegance of
such activity. And more people might tinker with building their own
equipment for this than they would for other forms of radio
communication until they become more experienced at the hobby.
If you think only the people willing to do this sort of thing are the
people who should be in ham radio, then I think I could see why you
believe there should be a Morse requirement. Perhaps there are some
others reasons?

I like to work with electronics, especially simpler circuits that do
much despite the simplicity. I remember seeing a one tube circuit
suitable for shortwave Morse operation in an old RCA tube manual. Such

a thing would be intriguing to me. I might decide to learn Morse just to be able to build and enjoy using such simple equipment. But I think it should be an option and not a requirement for ham radio.

Sincerely,
Dennis

Yes it's true. No performance degradation inside the PVC. No retuning is
necessary. Twinlead'll handle 50 watts. Performance (except possibly very
high power handling capability) will be the same.

Have fun!

> believe there should be a Morse requirement. Perhaps there are some
> others reasons?

Aloha Dennis,

You have hit upon the reason already, it is in the ITU defining
paragraphs
of the international Amateur Radio Service"

"Treaty, in Article 1, ITU "International Radio Regulations",

Article 53: Definitions--"Amateur Service: A radio-
communications service for the purpose of self-training,
intercommunications and technical investigations carried out
by amateurs, that is, by duly authorized persons interested in radio
technique solely with a personal aim and without pecuniary interest."

Note th word "and" conntecting the two words "self-training,
intercommunications" with "technical investigations" by
duly authorized persons "interested in radio technique",,,

The purpose of amateur radio is MORE than just talking to
other people on the radio!! And the teaty has in mind that
any one of these duly authorized individuals should have
the ability/willingness to exchange contacts with any other
authorized person; for the authors of the treaty, the least

expensive, most world wide common utility mode for
this purpose was CW; so they put it into the treaty.
Amateur radio is INTENDED for people interested in
the technical aspects and the various modes of intercommunications,
of which, the CW mode seems the least expensive to set up,
and of very wide spread use throughout the world, so they
put it in the treaty.

And our own Congress put the following words into the US
Telecommunications act, Part 97 The Amateur Radio Service,
along with the CW requirement:

"97.1 (c) Encouragement and improvement of the amateur service through
rules whick provide for advancing skills in both the communications and
technical phases of the art.

97.1 (e) Continuation and extension of the amateur's unique ability to
enhance international good will."

97.1(e) implies the US amateur's willingness, and prepardness, with
CW if necessary, to communicate internationally with any other
"duley authorized person" using his CW mode as an act of enhancing
international good will; not saying, "Well I don't want to talk to
him,
he is just using CW and running low power that is pretty tough for
me to copy at that, so I won't amswer him!" Such is contrary to
the spirit and intent of amateur radio.

Just my $.02, many DO NOT agree with this view at all!!

An amp probably won't help you much. Going to a 100W amp will
only give you about 1 s-unit (6db) improvement. It's not worth
the money. Try using a more efficient antenna.

5021. Re: Moonbounce ELINT (was Re: General military voice SatComm question)

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-29 00:00:00 UTC
From: higgins@fnald.fnal.gov
Message-ID: <1997Sep29.174807@fnald.fnal.gov>
Source record: 189599
Cross-posted to: sci.space.history,sci.astro,rec.radio.amateur.misc

A number of people have replied by e-mail and in sci.space.history to my questions about using the Moon as a reflector to gather electronic intelligence. I will continue to set followups to that newsgroup, but I thought sci.astro and rec.radio.amateur.misc might be appropriate places to remind readers of this thread, since it impinges on both the history of radio astronomy and weird radio trivia.

Patrick Palmer, an astronomer at the University of Chicago, told me that he'd never encountered the claim that the Sugar Grove, West Virginia was built for scientific research. He recommended a recent book that treats the history of this failed project in fair detail: *To See the Unseen : A History of Planetary Radar Astronomy* by Andrew J. Butrica, published by NASA's history series in 1996. I've met the author, and been meaning to read the book-- now I have fresh reason to do so.

In article <6eeY-ERf3SB@argo.rhein-neckar.de> SENECA@argo.rhein-neckar.de quoted extensively from Bamford's book *The Puzzle Palace*, including:

> Since its beginnings in the mid- 1950s, the secrecy surrounding
>Sugar Grove has been intense. The cover story throughout the entire
>life of the project was that the six-hundred-foot dish was purely for
>research and radio astronomy, permitting scientists "to tune in on
>radio signals as far as 38 billion light years away," according to
>the local newspaper. The timing was appropriate; Sir Bernard Lovell
>had completed the world's first radiotelescope just the year before.
[Well, THERE's a historical error! --WSH]
>This was the giant 250-foot Mark I at Jodrell Bank.

It may have been this passage which left me with the idea that the Sugar Grove dish was publicly explained as a radio astronomy project.

SENECA also suggested that the Moon might have been used as a reflector for spy transmitters located behind the Iron Curtain.

Dwayne Day points out that there was military and intelligence-agency funding for a fair amount of radio astronomy and related research during the Cold War, and it's a mistake to think of academic research in isolation from this... they were intertwined, and the intelligence community sometimes found scientific facilities and personnel useful. (But he doubts the spy-transmitter theory.)

Dwayne suggests that new declassified material could be the basis for an interesting history article. Hmmm...

In article <342fa9bb.0@130.160.4.249>, keel@bildad (William Keel) writes:
> The tale of the Sugar Grive (IIRC) 600-foot dish seemed pretty common
> knowledge when I did my time as a summer student at NRAO (Charlottesville

> intelligence, and I never heard that any significant radio astronomy
> role had been played. Some probably would have been done, of course,
> since
> (a) the NRL folks are demonstrably no slouches at basic research
> (b) the Moon is above the horizon only half the time
> (for which all we dark-time optical types are happy).
>
> Just two minimal units of local currency...

As I thought, Sugar Grove is well established in the folklore of radio
astronomers. Thanks to everyone for enlightening me.

Dave Martindale <davem@cs.ubc.ca> wrote:

"Yes, this *is* a good analogy. B&W photography is still alive and well
and very much being practiced, even though it is no longer "mainstream".
And it now takes a higher level of technical skill to work in B&W than
colour (unless you are willing to pay for "professional" processing)
because you now have to do your own B&W processing, while the corner store
only does colour. Still, B&W shows absolutely no sign of dying out
completely."

That's what you get for living in Canada. :-) In the U.S., the largest chain of photo labs -- Kodak's Qualex, which services a majority of drug stores, supermarkets, discount department stores and photo specialty retailers -- still does B&W processing, though it is somewhat more expensive than color (and takes longer to turn around). I wouldn't be surprised if Fuji's chain, the second-largest, still did B&W too. Qualex also still handles color slide and Super 8 movie processing, again with long turn-around times due to lack of demand (the processing machines may only be operated once or twice a week).

> believe there should be a Morse requirement. Perhaps there are some
> others reasons?

Aloha Dennis,

You have hit upon the reason already, it is in the ITU defining
paragraphs
of the international Amateur Radio Service"

"Treaty, in Article 1, ITU "International Radio Regulations",

Article 53: Definitions--"Amateur Service: A radio-
communications service for the purpose of self-training,
intercommunications and technical investigations carried out
by amateurs, that is, by duly authorized persons interested in radio
technique solely with a personal aim and without pecuniary interest."

Note th word "and" conntecting the two words "self-training,
intercommunications" with "technical investigations" by
duly authorized persons "interested in radio technique",,,

The purpose of amateur radio is MORE than just talking to
other people on the radio!! And the teaty has in mind that
any one of these duly authorized individuals should have
the ability/willingness to exchange contacts with any other

authorized person; for the authors of the treaty, the least
expensive, most world wide common utility mode for
this purpose was CW; so they put it into the treaty.
Amateur radio is INTENDED for people interested in
the technical aspects and the various modes of intercommunications,
of which, the CW mode seems the least expensive to set up,
and of very wide spread use throughout the world, so they
put it in the treaty.

And our own Congress put the following words into the US
Telecommunications act, Part 97 The Amateur Radio Service,
along with the CW requirement:

"97.1 (c) Encouragement and improvement of the amateur service through
rules whick provide for advancing skills in both the communications and
technical phases of the art.

97.1 (e) Continuation and extension of the amateur's unique ability to
enhance international good will."

97.1(e) implies the US amateur's willingness, and prepardness, with
CW if necessary, to communicate internationally with any other
"duley authorized person" using his CW mode as an act of enhancing
international good will; not saying, "Well I don't want to talk to
him,
he is just using CW and running low power that is pretty tough for
me to copy at that, so I won't amswer him!" Such is contrary to
the spirit and intent of amateur radio.

Just my $.02, many DO NOT agree with this view at all!!

The modern way is to build an array of dipoles each including a digital phase shifter. You then calculate and adjust each phase to get the beam you want. And, by the way, you can place a very sharp null in the direction of an interfering source that way.

The other way is to get a copy of the ARRL Antenna Book and pick a model that suits your needs. You'll have to scale it from one of the ham bands. That's the Amateur Radio Relay League.

You are probably going to wind up with a Yagi which is a buzzword you can search on.

I didn't write that "CQ-DX" paragraph, Mike ... in fact, I believe YOU did ...
so your ""Yup. That about sums it up." is overly self-congratulatory ...
(and another venture into the realm of intellectual dishonesty on your
part, since you know damned well I didn't say that ...)

> >when it has NO valid justification as a government requirement,o
>
> It has no valid justification in *YOUR* mind. However:
>
> 1) We do have a treaty requirement for a sending/receiving morse test

With NO speed requirement whatsoever ... the treaty needs modernization,
but until that time the treaty obligation could be met just fine by a 5 wpm
test ... or a 5 word per DAY test ...

> 2) It is in the government's interests to promote a common mode of operation

Personal conclusion, not in evidence ... It is more than self-evident
that it is MORE in the government's interest to promote modernization,
widespread technical self-education, advancements in the SOTA, etc ...
(actually, that IS our raison d'etre, though it's been lost due to ARRL

perversions of the service into a games forum)

> 3) 40% of all amateurs do use morse code

Perhaps ... but only 27% use it "regularly" ... the remainder use it
"never" to "rarely" ...

> 4) CW is a major mode in DX

So what??? (even if true, it's irrelevant to licensing requirements)

> 5) Most long-distance contact records are made using CW

So what? (even if true, it's irrelevant to licensing requirements)
Besides, that just shows how backward most hams are ... out of
touch with today's world of technical wonders ...

> 6) Most experimenters use CW for their "short, controlled" transmissions.

What the hell is that supposed to mean???? Are you talking about
the mindless "cookie-cutter" "QSOs" of the contester and DX-hound???

Ya know Carl, 99.5% of statistics are made up. I still wonder what
statistical method of a plethera of methods is being used to come up
with all this amateur radio data on how many do what.

Right on !!!!!!!!! If the no-code proponents are as smart as they fancy themselves, why don't they just learn it and get it over with, then forget it after they have their privileges? I learned 5 wpm code in 8 weeks, 10-20 minutes a day, while driving my car to work, using farnsworth method tapes. Surely it is easier just to abide by the rules like everybody else and earn your privileges, than to waste so much invective whining about how the rules are unfair. The rules are fair, they apply equally to all operators. If some old fart can master it, why can't anybody. [Apologies to the "old fartz"] I have learned the code, I will use the code until I gain my full speed and privileges, THEN I will decide whether to keep operating cw or not. Why should anyone be allowed unrestricted free access to the same bands that other operators had to earn; just because they feel entitled? I think not.

But only when he enforces the laws, by legal methods. As far as I know, there are no laws that allow him to decide that a person is guilty, and sell their property - without them being first convicted on court.

: > 2.) Who is he to do this without filing charges and letting the legal
: > system decide if these people committed a crime and what their punishment
: > should be?
:
: Ever hear of asset forfeiture?

Yep. It is a gross abuse of the intent of the enabling laws. The Constitution guarantees that the government will not take your property - unless you obtained it illegally. It does NOT say that the government can take your property, and that you have to sue in civil court to get it back - assuming that they haven't already sold it. And charges will probably not be filed - why bother, the police have obtained what they wanted - the money (or proceeds from the sale of the property).

: > the alleged perpetrators rights.
:
: See #2

: > 4.) Where do these Gestapo actions stop?
:
: When _we_ take our country back

That cannot be done when the government can take everything we own, and lock us up, on a whim - and half the population applauds their actions. They would think differently, if the police did that to them.

: > I wholeheartedly agree that people should obey the law and that it should
: > be enforced. That said, this LEO is picking which laws he wants to enforce
: > and ignore. That is not the way for him do to do business.
:
: So ... who decides what laws should be enforced or obeyed?

: LEOs have always enforced the law as "they saw it"

True - at least as far as arresting people for perceived violations of existing laws. But it was only with the stupid "War on some drugs" that the police really started to be more interested in boosting the budget than in enforcing the laws.

I doubt if the sheriff could point to a local statute that prohibits the transmission of profanity over the air. The same would be true for soliciting. As such, he would not have jurisdiction for taking action - which supposedly is one requirement for legal action.

: We have sat on our collective butts for decades as our civil rights have been
: chipped away.
:
: Get out there and take the country back!

Fat chance. The population seems to want to be protected from potential threats, as well as real ones.

AFAIK, the FCC no longer issues Class D FM Broadcast licenses (10 watt
educational FM stations). It's all Class A and above now.

It's not a simple process where you fill out an application, send in a
fee, and buy the equipment off the shelf. It's a complex process that
can take several years to accomplish. You have to apply for the
license, have a comprehensive engineering study done to ensure your
station will not cause interference with ANYBODY, get a construction
permit (when you get the initial OK from the FCC), buy the equipment --
transmitter, antenna, feedline, studio-transmitter link, transmitter
site, Optimod, studio equipment, EBS system, transmitter remote control,
have another engineering study to make sure it all falls within FCC
guidelines, and get the final nod for the operating license. Don't
forget that you also need a Chief Engineer (in your case, a part-time
employee is OK) under some sort of contract and retainer fee to keep
everything running smoothly. We're talking big bucks ($50,000 to
$100,000 neighborhood for a basic set-up) to get up and running.

I couldn't tell you where to start looking for grants. Lots of
research.

> PS Also, what is needed to pass the FCC tech test(age requirements, degrees)?

You just need to pass the FCC Radiotelephone Operator's License test
(what the Chief Engineer must possess). There are no age or educational
requirements.

On air operators (DJ's who run the controls) must have a Restricted
Radiotelephone Operator's Permit (fill out the application and send in
$35) which basically says that you are trained and know how to operate
the transmitter and EBS equipment.

One local high school here could no longer afford to maintain their
station and they shut themselves down. It's expensive to maintain.

Don't even attempt to homebrew an FM station. Fines for running an unauthorized broadcast station are pretty stiff ($20,000 and up).

Hope this helps. I'm not trying to scare you away from building a station. It's a great thing to have. I'm just letting you know what's involved.

: John ... are you suggesting that all pilots should be forced to learn
: Morse before they could get a license???

Although not required, it probably should be.

The Morse code beacons are not likely to be replaced any time soon. Voice
is not as good under marginal conditions, and changing to a digital mode
would require a lot of extremely expensive equipment upgrades.

As it is, the identifier can be heard for at least as far as you can
receive a reliable indication from the VOR.

: will become a ham ... but many would, were it not for the archaic
: code "requirement" ... and the loss of those hundreds is OUR loss
: and it is a tragic loss of skilled contributors to our service ...
:
: While we will not recruit EVERY engineer and technician in the
: radio and computer fields, we will recruit FAR MORE of them
: without the code hazing ritual ...

I doubt if you can document that. It is already possible to become
a Ham without any code test - as you well know.

A real engineer does not need HF to develop new circuitry or methods
of communication. So working above 30 MHz would not be a limit, unless
the person is more intent on easy DX - which has little (or nothing) to
do with advancement of technical skills.

Your argument is rather empty.

5047. TS-850 Transverters ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-29 00:00:00 UTC
From: Dan K Nelson <postmaster@fbi.gov>
Message-ID: <60ni8j$6or$1@gte1.gte.net>
Source record: 189701

I noticed while re-reading my user manual for my TS-850/sAT that it has a section on connecting "the transverter(s)". It does not give any specific details, but it does tell how to connect the unit and use the set-up function to change the display to tune from 50-52 mhz. It also tells how to change it to tune the 2 meter and 70 centimeter bands.

I have tried these menu functions, and they do work. My question is: does anybody know anything about these transverter units? I have the user manual, service manual, and sales brochure for this radio, but nowhere does it give any further info regarding these accessories.

Since I was seriously thinking about changing rigs to get the six meter band, I am really interested to find out if it can be added to this radio...

73,

Dan K Nelson, KF6KNB

Well Carl after seeing the HUGE HUGE HUGE number of your anti-code
posts is makes me *REAL* curious if perhaps you're not quite so

dedicated to opening up ham radio to all of the "countless hundreds of capable ... even brilliant ... technical professionals" or if perhaps you've just had a *BITCH* of a time with the code and now it's your time to Bleat ????

Seeing the huge number of your anti-code posts I'm surprised you haven't popped a gasket yet. Maybe we could submit a test question to MENSA, "Burt is to Hams as Carl is to ...."

Try http://www.qrz.com and you'll find LOTS of code practice software Carl , it'll keep you occupied until 2010 when the code is abolished and afterwards you can *BLAZE* across the HF ether at 300 baud in one of your vaunted digital modes ;)

I've used CW and most every digital mode except Clover extensively and if you think that eliminating the code is going to "save" ham radio in the era of the internet, you're as much a fossil as the pro-coders whose ox you love to gore.

Welcome aboard!

Yes indeed. Jump in and introduce yourself (we'll never get to know you
if you never transmit!).

And you don't always need to wait until a conversation is finished to
introduce yourself. If you hear some folks chatting on some subject in
which you have an interest, (perhaps sports as an example), simply drop
your call into the conversation between "overs". Usually the next person
will "recognize" your call and turn it over to you. At that point
introduce yourself, and make some short comment on the topic ("Yeah, the
Packers really looked sorry against Detroit."), then turn it to the next
person.

By the way, in many localities, the word "break" on 2-meters denotes that
you have some urgent or emergency traffic, so avoid using it to enter a
conversation.

Another common way to initiate a contact on 2-meter repeaters is to just
transmit "<yourcall> Monitoring". This is just a way of notifiying
anyone listening that you are soliciting a contact. Naturally this
method does not give the other station any hint of your interests (as
opposed to joining an existing conversation) so the conversation may
start a bit slow, but don't just restrict yourself to comments about the
weather, or whatever. Ask a few questions, and likely you will find
topics of mutual interest.

Again, welcome aboard,

73, Hans, K0HB

In article <60na1psol6@bashir.peak.org>, billn@peak.org says...

Wait a sec here. To the best of my knowledge, soliciting sex over the cb would more than likely be against the law if there was a law on the books in the city where this took effect, but how many cities have this law?

Without this law would it not be up to the FCC to come down on the people instead of the local people?

As for the property, I do not believe that can be sold until conviction has occured. They tried that here in my town with someone and he was found not guilty. The police had to replace everhthing that they had sold at the police auction, but too, I guess that would depend on how the local judge would rule on it.

Pat

>The ultimate boatanchor receiver...

I believe I may have *seen* one, but I've never attempted
to *lift* one. The only National I've owned was the NC-190
drift-O-matic. That thing was a horror. I replaced it with a
Drake 1A, and later with a Drake 2B. Now that was a neat
little receiver (though Drake wouldn't have recognized it
after I got done modifying it).

I heard that MTBF was very poor on the monster you're
talking about, something on the order of 150 hours as I recall.
I think it drew nearly half a kW too, maybe more, that was a
long time ago. That's quite a contrast to a modern HF receiver
(or even transceiver). Receive draw is on the order of 12 to 25
watts, and MTBF is on the order of 20,000 hours (after infant
mortality). Some are even more thrifty.

I suppose those old monsters have a certain charm, like an
old steam locomotive, but I'm just as glad we have things
that work better now. I will admit to still owning a B&W 6100
though. That was the first amateur synthesized (crystalplexed)
SSB transmitter, and the first store-bought radio I ever had..

I used it on RTTY up until about 15 years ago when I got talked
out of the 2B by a neophyte wanting a receiver for code practice
and broke up the station. (I had upgraded to a used pair of Drake
Twins for my voice rig, but they couldn't handle the guff of the long
keydown times of RTTY, sissy sweep tube finals.) I tried to give away

the Mod 15, but no one would take it, so it wound up as landfill.

The B&W needs new filter capacitors now, and I might get around
to putting some in someday. It is rather impressive, in an early 60s sort
of way, but I doubt I'll ever put it back on the air. My now almost ancient
IC-735 does yeoman duty for my HF digital operations today. That thing
is a rock, it just won't quit.

I have a Morse Code tutor that sends the code to the internal PC speaker from the keyboard. It also decodes morse from a straight key or Paddle key conected to a com port. It is written in Power Basic and you are welcome to the code if you want it. The program itself DMORSE.EXE is available from my web page at kay-dee.demon.co.uk if you want to see how it performs. Let me know if you would like the code.

5055. W3W Special Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-30 00:00:00 UTC
From: chris doherty <n3uvr@icontech.com>
Message-ID: <01bccd41$95f28ac0$d948c7d0@default>
Source record: 189473

Hello All

W3W, the nation's first-allocated 1x1 special-event station call sign, will operate during the weekend of October 11-12, 1997.

W3W's special event is the Steamtown Marathon, attracting 1000 runners and tens of thousands of visitors and spectators. The Steamtown Marathon begins in Forest City, PA, and ends in Scranton, PA, known as Steamtown. Scranton is the site of the Steamtown National Historic Site, depicting America's golden age of railroading.

The Scranton Pocono Amateur Radio Klub (SPARK) was granted W3W on August 20, 1997.

Try to contact W3W on all bands from 160 through 2 meters.

W3W will begin operation from downtown Scranton at 12:00 a.m., Saturday, Oct. 11 (that is one minute after midnight on Friday night) and continue operation until 6:00 a.m.

W3W will resume operation at 12:00 noon on Saturday, Oct. 11, and continue operation until 1:00 a.m. on Sunday, Oct. 12 (that is Saturday night).

W3W will resume operation at 9:00 a.m. on Sunday, October 12, and continue operation until 6:00 p.m. on Sunday evening, Oct. 12.

W3W may be operational at other times during the weekend, too.

On HF phone, listen for W3W on or about 1850, 3980, 7280, 14280, 21380, or 28310 kHz. Technician Plus Licensees should listen for us on or about 28310 kHz.

On VHF phone listen for us on 50.125 or 146.55 MHz.

On HF CW, listen for W3W at 40 kHz up from the bottom of each band or on or about 1810 kHz on 160 meters.

W3W will QSL with a beautiful certificate AND a handsome QSL card, with both stating that this is the nation's very first allocated 1x1 special-event station call sign. All stations wishing to receive these should send a QSL card, return mailing label, 55 cents in postage, and $1 to:

SPARK
PO Box 20206
Scranton, PA 18502

Please do NOT send any return envelopes.

73,

Ray Collins, WX3A
President, SPARK

5056. HTX-404 Tone Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-30 00:00:00 UTC
From: kevin@visi.com
Message-ID: <60pk6c$pi7$1@darla.visi.com>
Source record: 189474

Hello,

I am on my third HTX404 and all have had the same problem. The CTCSS squelches the radio for short periods even when there is a tone present. But the problem seems to go away if I tune the receive freq down 5Khz.

Nobody else I know has the same problem listening to the same repeaters and radios.

Has anyone seen this problem before? Is there something I can do to solve this, other than tuning 5Khz down? Or am I going to have to take this one into the shop since they all seem to have the same problem.

Thanks

Kevin

Hello

I have just moved into a new subdivision with a few houses in
the area and more to be built. I have a Butternut vertical antenna
10-80 meters which i have just recently put up, it is ground mounted
about 2 ft in the ground near my own house. I have yet to run any
radials from the antenna or have i put a groung rod at the antenna
yet. And of course i will ground the radio to the copper water line
coming into the house, i have a low pass filter i will have in
transmission line etc.
I am very concerned with EMI/Interference once i am on the air, i know
there is wired built in speakers in some of the neighbors new homes.

Please reply with any thoughts or concerns u might be able to help me
with. And is it true that a vertical is more ap to produce more
problems than a horizontal antenna.

This one does not seem to fit the description above, but is very
handy for newsletter writers, since it broadens your sources
of information.:

Amateur Radio News Service
c/o Susan Biggs
9708 Skillman #107
Dallas TX 75243

I have no pecuniary interest in the organization. One of our
local club newsletters quotes from various other newsletters,
and often credits ARNS for the source.

There is another one. Send a message to nita6@juno.com.
I am certain she can assist you. She is editor of The RAGS Review,
newsletter of Radio Am.of Greater Syracuse.

You are not clear on the concept. All antennas are bidirectional. If they have high receive gain, they have high transmit gain.

> I basically
>need to transmit in front of me, none to the rear and very litte
>to the sides. Is there also some way to vary the angle of how
>much is transmitted to the sides? I need to transmit a 433MHz

Try a Yagi. But any antenna Except perhaps a microwave dish) will have some rear radiation. In the case of the Yagi, the rear is significantly less than the front, but not totally absent.

Varying the "angle" means varying the antenna gain. I don't think so unless you want to change its construction on the fly.

Bob.

I never said it did (don't become like Carl - putting words in others
mouths). I only pointed out (to a fellow pilot) that morse proficiency
was a useful skill in the cockpit. Has to do with easing
pilot workload.

Then there are some REAL "quick-Studies" like Carl that in just a
short span of 20 years or so have worked themselves up to 5WPM.

Carl also has some marvelous spread-spectrum (spread-rectum?)radios
that incorporate some of the latest and greatest technology (noise
floors below theoretical limits (Heck with Shannon we'uns got Carl
!!!), ability to solidly copy 100 meg a sec digital data at S/N levels
that a dog couldn't hear (able to leap tall noise spikes in a Single
bound !!!!! etc.)) that are more simple in design than your basic CW
rig!!!!!. ;)

Do you have anything other than speculation to back up that
claim? If they really meant that, i.e., "the least
expensive, most world wide common utility mode for
this purpose was CW", why didn't they state that?
They get rather pendantic in other areas, so it seems
strange that if this was their real reason, they should
neglect to put that in the treaty. The reason is also
highly debatable in that Morse Code is clearly not
the most world wide common utility mode. Also,
as has been pointed out before, a common mode of
communication is only a fraction of the pieces necessary
to ensure or allow intercommunication.

> Amateur radio is INTENDED for people interested in
> the technical aspects and the various modes of intercommunications,
> of which, the CW mode seems the least expensive to set up,

> and of very wide spread use throughout the world, so they
> put it in the treaty.

I think you are placing way to much emphasis on this
word"intercommunication". It would seem much more likely that
the choice of words was to differentiate amateur radio from
a broadcast service, i.e., two-way communication only
among amateurs.

> the spirit and intent of amateur radio.

Nothing in Part 97 either ensures a willingness to communicate
withothers or suggests that Morse Code is the preferred mode to
facilitate such international good will. A good TNC would enable
one to communicate with an international Morse operator without
requiring a person to emulate a modem. If the writers of Part
97 really believe that emulating a modem was a requirement
to ensure intercommunication, why don't they require all amateurs
to have Morse capable equipment? Knowing Morse Code
is again, only a piece of the link.

> Just my $.02, many DO NOT agree with this view at all!!

Can't speak for many, only myself, and you are right withrespect to me.

Well, Jim, you took out the logical point I made and substituted
a pile of crap. Debating is not done that way. That statement you
crunched continued on, and made my main point. But of course
you heap ridicule by quoting out of context and substituting stale
Rice Krispies. I am still waiting for Carl to respond to what I said.
Of course, HE told me a long time ago to "go to Hell", so I reckon

messages from Earth, since I did not elect to go to Hell, are not
to be reckoned with. BTW, Jim, just what IS the point of YOUR
post anyway? Is MY COMPLETE message -- which brought up
a strong philosophical disconnect in Carl's expressed thoughts
is reduced to the least significant thing I said. You disappoint me.
AND, using your tactic, you ridicule me. Bad move, James. Even
Carl would -- if he wanted to confront me -- tackle the entirety of
what I said. I am confident of that....

Here is what you crunched out, for those readers who have no
idea what this is about:

-Carl, you let the proverbial cat out of the bag... Let us take
-just the last sentence:
-
-Are you saying we must make the testing easier than it
-already is? Your observation about the modern young
-human beings wanting it to be easy or they will drop out is
-unfortunately all too true. At least it seems to be true and
-of course we cannot apply that observation to everyone --
-thank goodness... Getting this back in context, you
-are advocating ridding us of Morse tests because they
-will be viewed as too hard and too much work. I can
-only assume you feel the same way about the rest of
-the testing, eh? If not, then you have a totally inexplicable
-double standard. Also, you have negative expectations,
-period. And, it shows through very clearly that it either
-pleases you or does not surprise you that only one in
-three even wanted to try. Well, never mind, Carl -- we
-now have a bunch of no-code techs we did not have
-before, because they passed (test mustn't have been very
-hard, right?), and they will enjoy all that ham radio has
-to offer (yeah, right). I know you did not say that, but
-I think you are pleased that 2/3 of the no-coders did
-not want to work on upgrading because that would be
-too hard, and the other third in your mind will indeed
-find it too hard once exposed to it. Ham radio is not
-for everybody, and making it so is ruining what is left
-of ham radio.

Now that we have set the record straight, debate at will.
If you can't find the keywords, they are:

-we cannot apply that observation to everyone

-you are advocating ridding us of Morse tests because they
-will be viewed as too hard and too much work. I can
-only assume you feel the same way about the rest of
-the testing, eh? If not, then you have a totally inexplicable
-double standard.

I won't make it any tougher than that -- too much bandwidth
required to make your message even begin to address mine
even in a childish, biased manner....

5070. Circuits Galore

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-30 00:00:00 UTC
From: Harry Lythall <rharris@arcturus.net>
Message-ID: <3430B5BE.5A5@arcturus.net>
Source record: 189488

Circuits Galore

Hi all, I'm back!!

Two weeks abstenance has meant little work on my homepages. I have replaced the counter to another that works. During the last two weeks the pages have had '0' visitors although 130 of those have sent me E-mail. Strange!!

PMS OTA
Just before the holiday, my old PC-jurassic blew itself to bits so my packet PMS, with all the radio, circuits is off the air but Ron, G0TLA, is still holding strong.

VALVE (tube) RX
The 'valve receiver' has seen a little more work done to it and the tracking across the lower MW band is much improved. With the new coil winding data the LO/RF tracking is almost perfect. Far better than expected.

OSCILLOSCOPE
Loads of comments about the basic oscilloscope information. The general opinion so-far is that it is not so basic, what do you think? Have I forgotten anything?

SYNTHESIZED RECEIVER
The ORIGINAL circuit diagram for the 'Synthesized Receiver' project was 100% accurate. The VCO and Phase Detector chips are NOT CMOS. Thanks to E-mail, I have now been spared the laborious task of taking my own synthesizer to bits to get the information for the homepage. I will now be updating the project hopefuly before Friday. Many thanks to the kind soul who took the 'time and trouble' to sort out my cryptic mess for me and provide the information.

REQUESTS
I have had requests for VHF and UHF RX preamps Not being so interested in VHF they will have to wait a couple of weeks, but it sounds like a good idea to me.

SOON
Coming soon is an AM TX for the MW band so that old vintage radios may again 'beat' to the rythm of Perry Como, or Dave Brubek.

DC RC HITS VLF
My Direct conversion RX was sucesfuly used on the VLF bands

from 15KHz upwards, I am awaiting a response from the gent concerned so that I may add the details to the homepage.

NOT AGAIN!!!
Finally if I get just one more request for circuit diagrams to locate lost model aircraft I will scream!!!! I the best method is to write your name, address, and telephone number on the wing. You could also offer an 'unspecified' reward for its return. Readers Digest are always giving away their 'valuable' pocket calendars, printed on genuine paper.

URLS
Ok then nothing else of interest to add so here is the URL, just in case you have not bookmarked the page. You will not be dissapointed.

http://user.tninet.se/~acz732k/ Main site
http://hem2.passagen.se/sm0vpo Mirror site

Have fun with radio Homebrew / QRP / Hamradio / Wireless.
Best regards from Harry, Upplands V�sby, Sweden.

PS Several E-mail massages have begun "I am not a licensed Radio Amateur, but ... ...". My page is not exclusively dedicated to HamRadio, QRP, but includes ALL aspects of homebrewing (including the booze - Hic!) and electronic construction.

That is nice. I do not see what the heck it has to do with anything
related to amateur radio though.
No one is saying Morse is completely useless. I do, however, claim that
its value is not such that it
should be a requirement for an HF license. I speak impartially; I
already have my Extra. But I don't
think the Morse requirement is good for our hobby. Although some people
become sufficiently interested
in amateur radio before being licensed, I believe that by setting the
bar as high as we do, we mainly
deter young people from joining the hobby. Just listen to the bands.
It is mainly old timers.
Look at hamfests. Same thing. I'm 43 myself, no spring chicken, and
I've got nothing against old timers, many of whom are my friends. That
doesn't change the fact that we need new blood, or our hobby will
diminish further. Mandatory Morse testing frustrates this, and
therefore needs to go.

Morse, despite all the protestations to the contrary, has devolved into
almost a completely
recreational mode. It is absent within the context of emergency or
commercial contacts. Most other services have abandoned it; MARS has
actuall banned it. It is mainly a contest and dx mode, for recreation
only. Not surprising; Morse is great for short, formulaic contests with
a low data content. Rig hr is kenwood, name is bill, QSL via buro sure
73 SK. Nothing wrong with that, but that doesn't
justify a Morse requirement.

Closed Circuit Advisory

The following advisory is not for transmission over amateur radio. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1050 for release on Friday, September 26th, 1997 to follow.

(*****

The following is a QST

The FCC may not prosecute the beach ball jammers and a controversy grows around NWS bulletins on your repeater. These stories and more on Newsline report number 1050 coming your way right now!

(*****

FCC may refuse to prosecute beach ball jammers

The FCC may not prosecute the two non hams who admitted to harassing an Amateur Radio repeater in Elkhart, Indiana by planting jamming devices. This is because the FCC says that Elkhart hams failed to file a formal complaint to the agency through the ARRL's Amateur Auxiliary.

According to Mike McCauley, KB9GNU the FCC did come to Elkhart and it did pick up all the evidence in the case. But the agency is now telling the ham radio community that Amateur Radio is self policing. The agency indicates that this combined its failure to file through the Amateur Auxiliary was an indication that hams had solved the problem on their own.

Chris Jellinek of the Chicago Field Operations Bureau says that her office is in receipt of a malicious interference complaint filed by the county sheriff. It names the man and a woman who admitted planting numerous jamming devices in Elkhart over the past year.

But McCauley says that the FCC is not telling the whole story. He tells Newsline that the hams involved in hunting down the jammers did attempt to contact the FCC. They did so on four different occasions, but never once did he or anyone else receive a reply.

McCauley says that they also contacted the Federal Bureau of Investigation twice and the American Radio Relay League three times and never received a reply.

McCauley was also critical of the attitude of the FCC inspector who did finally come to town. He says that there was supposed to be a meeting with the FCC's Robert Harness. The hams waited over three hours for him to show up. When he finally arrived, he would only meet with the Sheriff. The inspector snubbed the ham radio community and left without speaking with those waiting.

The FCC's Jellinek says her office is investigating the situation, but not as an ham radio related case. She also says that a letter of reprimand or similar minor sanction may be issued against the pair depending on the information that is uncovered.

(Via Newsline)

NWS warnings on ham repeaters

If you're an amateur radio operator active in emergency communications, then articles in two recent amateur publications may have you a bit confused. The first article says automatic retransmission of severe weather warnings from National Weather Service weather radio over amateur frequencies is illegal. The second article says the Weather Service wants to retransmit those warnings over amateur repeaters!

Is it legal for an amateur radio repeater to automatically retransmit a severe weather warning from the National Weather Service's weather radio network? An ARRL official writing in the September issue of QST magazine says no. But Dan Gropper, KC4OCG and others active in amateur radio emergency communications disagree. Gropper works closely with the Weather

Service's Washington, DC Forecast Office, providing Skywarn communications.

He takes issue with the comments in QST:

"I was extremely disappointed in seeing it. Especially because it appeared not to have a basis in an actual FCC ruling. Additionally, this is a situation where an article in a national magazine by the league can be used by the street lawyers among us to say, You see it is illegal, when in fact it has not been ruled illegal." Gropper

At issue is automatic retransmission. Instead of an amateur actually causing the warning to be retransmitted each time a warning is issued, Gropper's Skywarn group has designed their amateur repeater to retransmit the warnings without human intervention. They do it by modifying the repeater to automatically activate upon receiving an emergency alarm tone. That tone is sent over Weather Radio when warnings are issued. Amateur groups elsewhere in the country have been doing the same thing since the FCC relaxed its rules on prohibited amateur communications in 1993.

Gropper says there is precedent for automatic retransmission to be allowed.

"The FCC has granted FEMA permission to speak and have two way communications and initiating communications on amateur radio repeaters with amateurs and even gone so far to given them callsigns, as in KF1EMA. So, there for their is precedence of Federal Government speaking on amateur radio repeaters and initiating communications." Gropper

Gropper sent a copy of his views about the QST article to the W5YI Report. On September 15th, a W5YI article quoting Gropper's comments reported that the Weather Service wants to automatically retransmit weather radio warnings over amateur repeaters. The article also says the Weather Service has asked for support from the ARRL. But a Weather Service official says he's not aware of any such effort.

In the meantime, Gropper says his Skywarn group will continue to retransmit severe weather warnings automatically, until, he says, they are specifically told not to do it.

So what should you do if your amateur radio group wants to automatically retransmit severe weather warnings on your repeater? Dan Gropper's advice is simple. Read the rules and decide for yourself.

TSARC resurrection

Two weeks ago Newsline reported that the Tri-State amateur Repeater Council had failed. This left the metro New York, New Jersey and southern Connecticut area without any repeater coordination effort. We also reported that a group of area repeater operators would be meeting in Roseland, New Jersey on Saturday September 20th in the hope of revitalizing the organization or forming a new one.

The meeting did take place but it was not held at the original location. This is because nobody thought to reserve a meeting room. At the very last minute a meeting location was found at Rutgers but only fifteen people showed up. This was probably because nobody knew for certain if the meeting would be held, much less where.

None the less it was full speed ahead. The few hams present elected Stan Coffield, N2NKI as the new president along with a new secretary and treasurer. They also voted in the constitution. Ironically it was the same document that had been objected to last July. The group also announced that it would try to incorporate as "Three States Amateur Repeater Council so they will have credibility using the "T.S.A.R.C" name.

The only problem is that there are over 300 repeaters in that area. Many system operators are crying foul at not receiving personal invitations to attend the meeting. Others object to the last minute change of venue. But it appears that most system owners in the area want no part of any coordination council and the politics of the game. Right now its far to early to predict if repeater coordination will return to the tri-state metro area.

(Via Newsline)

(*****

FCC issues Gate 3 Callsigns

Only six weeks after the opening of Gate 3 of the Vanity Callsign program, the FCC has begun processing Gate 3 callsign applications. On Wednesday, September 17th, the agency issued almost 600 vanity callsigns to those who had filed applications on the August 6th opening day.

Personnel at the FCC's License Processing Facility in Gettysburg, Pennsylvania had spent much of the intervening time clearing out a backlog of vanity applications filed prior to the opening of Gate 3. They also had the job of matching up payments with electronic applications.

Applicants can check for new callsigns by using one of the popular callsign databases servers on the world wide web.

(Via ARRL)

(*****

Two versions of FCC Form 159 confuse filers

The FCC has issued a new Remittance Advice Form 159 that's somewhat different from the earlier version issued last February.

The new Form 159 differs from the older one in a number of ways, including addition of a Section F to fill in for credit card payment information.

As of September 15th the FCC requires vanity callsign applicants to file a Form 159 with their applications no matter the method of payment. But the FCC still was shipping the old Form 159 as of mid-summer, despite the July revision date.

(Via FCC, ARRL)

(*****

FCC Personnel changes

Some staff changes at the FCC. Regina M. Keeney has become the new chief of the agencies International Bureau. On September 15th, the former Wireless Telecommunications Bureau head replaced Peter Cowhey. Cowhey announced his resignation last month.

The FCC has also announced that Richard D. Lee has been named acting chief of the FCC's Compliance and Information Bureau. Since 1995 Lee has served as the agency's deputy managing director. Mary Beth Richards, currently deputy chief of the Common Carrier Bureau, has been appointed to succeed Lee as Deputy Managing Director.

(Via FCC, ARRL)

(*****

Riverside Convention success

The ARRL Southwestern Division Convention held two weeks ago in Riverside, California was a mild success. Registration on Saturday, September 13th was 1700 and the actual number may turn out to be close to 2000. This is twice what the crowd the convention had in Arizona last year but was still half what it pulled on the Queen Mary in 1995.

But nobody is complaining. Manufacturers and retailers Newsline spoke with were more than happy with this years turnout. They say is definitely a positive upturn in business for a West coast show and all had praise for show organizers.

This is the first time that the newly created Inland Empire Council of Amateur Radio Organizations has undertaken an event of this magnitude and everyone attending say that they did a truly outstanding job. Even more so when you realize that as far as we know, none of the committee members has ever been involved in a convention this size.

(Via Newsline)

(*****

Windtracks 97

Another success took part in the mid-West with another flight of a ham radio equipped balloon called Windtracks.

It was a mission that even NASA would be proud of. Windtrack 13, another in a series of high altitude amateur radio balloon experiments was launched from the Greentown Elementary Middle School near Cocuamo, Indiana.

The weather balloon and its three package payload sailed into clear blue skies over central Indiana as dozens of school kids, parents and amateur radio operators watched. Inside the school students handling amateur

radios provided by the Howard County Amateur Radio Club collected data and talked with hams from around the midwest that checked into mission control.

The two and a half hour flight took the balloon to over 104,000 feet before it burst and parachuted back to earth. Color pictures were transmitted from suborbit via amateur TV. While slow scan pictures bounced from one side of Indiana to the other through the repeater.

The GPS/APRS packet transmitter sent back location data while keeping tabs on the inside and outside temperatures of each of the radio packages. This was the first time sensors were used to study the temperature affects of the amateur radio packages.

Eight carloads of foxhunters from Indiana and Illinois tracked the balloon for twenty six miles. Most of them saw the packages make a soft landing in an alfalfa field northwest of Anderson, Indiana.

According to Windtracks Flight Director Chuck Crist, WB9IHS, this was the best flight so far.

IARU Meeting news

On the International front word that the IARU Administrative Council has set up an Amateur Radio Outlook Committee. This, to make general recommendations on the future growth and development of Amateur Radio.

The action came as the Administrative Council met in Beijing from September 13th to the 15th, following the IARU Region 3 Conference there. Tom Atkins, VE3CDM, has been named to head the panel. It was established in response to changing technology and the impact of the Internet on ham radio.

The Council also agreed on the instructions to be given to the IARU delegation to this year's World Radio Communication Conference. The International Secretariat will update this material as new information becomes available. The month-long conference opens October 27th in Geneva.

And in a related matter, Council members reviewed the status of the action plan developed by the 7 MHZ Strategy Committee. After WRC 97, information will go out to member societies to update the plan in the light of decisions taken at the conference.

High power not welcome on OSCARS

B.J. Arts, WT0N, who serves as an Official Observer says that he has received many complaints about satellite operators running excessively high levels of transmitter power within the uplink passband of Amateur communication satellites. Recently Arts observed stations on FO-20 running enough power to be much stronger than the beacon signal. In one case, two operators, who were in contact with one another, were causing Fuji Oscar 20's AGC to block out all other incoming signals operating with normal levels of transmitter power.

Arts says that satellite users should make certain that their downlink signals are no stronger than that of the beacon transmitter. He says that excessive levels of uplink power prevent other users from equally sharing the satellite's transponder. Arts says that it only takes several watts of transmitter power to make contacts through low-earth orbiting Amateur satellites. If ground stations have difficulty hearing their uplink signal then a significant upgrade in receiver sensitivity may be in order. Raising transmit power levels will just make the situation much worse for all.

School SAREX video wins CA Award

A video that focused on a successful SAREX contact during the STS-94 mission earlier this summer has won an award. The video about Center Street School in El Segundo, California, won the "Community Spirit" award during the South Bay Producers Guild Media Arts Awards. The awards were presented August 27 to honor individuals who had produced programs for local cable systems.

DX

In DX, the Midway-Kure DX Foundation returns to the Pacific September 26 though October 5th as K7K to conduct a major DXpedition from Kure Island. The 8 member team represents amateurs from Finland, Japan, Russia, Sweden and the United States. Joining the operators is a group of eco-scientists who will conduct research on Kure. The ham radio team will operate using four complete HF stations equipped with two antennas on every HF band allowing for dual-mode operation. QSL direct via Bob Johnson, KE7LZ.

And CT2FYW says that he will be operating a Jamboree On The Air station from Portugal in October. Pedro says that he would like to try to schedule some contacts so that the scouts can have a chance to talk to one another in different countries.

And VHF DXers take note. Earth is set to plunge headlong into the most intense interplanetary dust storm it has encountered in 33 years. Science News says that on November 17, 1998 -- a bit more than a year from now -- Earth will encounter an intense stream of debris from Comet Temple-Tuttle. This is the comet which creates the annual Leonid shower. The comet will have just passed the sun and will spewing out fresh particles. With no time to diffuse, the dense stream will intersect Earth's orbit. Its effect on propagation will be interest to note.

(Via DX sources)

W8JK's "Big Ear" to be torn down

Ohio State University's search for intelligent life among the stars using a historic antenna built by a ham may be coming to an end. This, as OSU's pioneering radio telescope in Delaware, Ohio, known as "Big Ear," faces certain destruction when the colleges lease on Ohio Wesleyan University's land expires December 31st.

According to an article in the OSU student newspaper, John Kraus, W8JK, designed and supervised the construction of the telescope in the 1950s. Kraus and a rotating staff of one graduate assistant and 10 undergraduates worked seven years to build the giant antenna.

The "Big Ear" consists of two 70 feet long, 100 feet high flat radio signal reflectors that face each other across a 3.5 acre aluminum ground plane. For the first 10 years, the "Big Ear" explored and mapped the skies. During that period it produced the most detailed map of the skies for its time and cataloged more than 20,000 objects.

W8JK said that Big Ear broke the distance barrier for telescopes, pushing scientists' view of the galaxy out to 15 billion light years. But thats about to come to an end. Sadly, the "Big Ear" will be razed to make way for expansion of the Delaware Country Club. Neither Ohio Wesleyan nor OSU

sought to renew the lease.

Children, children . . .
The people you are fussing with don't want CW because they are ultra.
CW is not NEW. QED.

Remember that there is no profit in wrestling with a pig; you'll just get
muddy and the pig enjoys it.

Or, as the Bible says (every religion in one form or another):
"Cast not your pearls before swine. They will trample them in the mud,
then turn and rend you."

doing away with the old, no matter how well proven it is, has been a fool's
move since we all spoke gruntish. that won't change any time soon.

I have 2 ts-440s radios. The goop is on one of the vco circuits. I
cleaned the circuit board and all components, this took some time to
do. I used a solvent called tolueen. both radios have not fail since i
did this...also when the radios were failing, i watched on a spectrum
analizer as the vco frequency slid across and dropped out. If you need
any help with this let me know via e-mail.

Acclaimed ham radio icon Milton F. ''Doug'' DeMaw, W1FB, died
September 28. He was 71. One of the most widely published technical
writers in Amateur Radio, DeMaw was diagnosed with leukemia earlier
this year and had been in failing health in recent weeks.

On hearing this news, Lee, ZL2AL said:
I wonder how many thousands of new hams have read his
technical articles in the various publications and said "I can
do that!" And did. Doug inspired a generation of hams around
the world to dabble or get immersed in the technical aspects
of this hobby. He will be sadly missed.

I am putting a Hy-Gain DX88 vertical up on a chimney mount. I
understand that radials are required but the 1/4 wave length radials
for 80m would extend way into my neighbours property. I know I can run
wires on the roof as an alternative but are they as effective
especially since they are concentrated to one side of the antenna.
Also, can they be fanned out in the attic below the antenna without
seriously affecting the performance? Your comments would be
appreciated.

"QTC DE NF3I - FM JIM SMITH TO TOM WILSON - FAMILY DOING OK - HOUSE
GONE - STAYING WID RED CROSS"

Nothing wrong with that, but that doesn't
>justify a Morse requirement.

It's another mode in the communications arsenal that breaks language
barriers. You don't get many intercontinental contacts above 50 MHz
(normally), while you do on HF.

If you don't have a computer, you do what you can. It's simple, it
gets the message across, sent by a simple oscillator hooked to a piece of
wire, and it has a gain of roughly 13 db over SSB due to lower
information content. 13 db - that's 2 full S-units over a given
bandwidth, or the ability to get you up and over the noise floor.

It's where we came from. People should know it because it works
toward achieving our <<PRIME DIRECTIVE>> - being better communicators.

And yes, I personally have to brush up on my digital modes.

>much is transmitted to the sides? I need to transmit a 433MHz
>signal into a 50 ohm unidirectional antenna.

The none to the rear part means you need a parabolic or spherical
dish, or a large planar reflector behind the driven element. If you
can tolerate a small amount of signal to the rear, you could also
consider a yagi or a phased array. To vary the transmission angle,
you'll want to physically point the antenna. (You can do a degree
of beam steering by offseting the feed of a dish, but that level of
complication shouldn't be required unless you need a *lot* of
forward gain, and thus have a dish too large to mechanically orient.)

One of the ARRL books had plans for an 18 foot stressed parabolic
dish which should meet your requirements. You might also consider
an axial mode helix in front of a large screen reflector. Plans for that
are also in ARRL publications.

>How pathetic!

At least they appear to be intellectually honest with their
feelings/beliefs. Perhaps you have a bit of a complex and really feel
it's your calling to *save* amateur radio but if I had to bet cold
hard cash I'd wager that it's your inability to get above the 5wpm
code barrier that is the true power source driving all of the
crying/whining.IMHO If Carl can't get above 5WPM he'll just leave no
stone unturned eliminating the requirement. To cover the deep seated
feelings of inadequacy he will throw up a *BIG* smokescreen re"
Shannon, Nyquil, Spread Rectum etc. (It's far easier to place the
blame on "Ye Olde Farte's" than to look in the mirror and say "Despite
my vastly superior intellect (in his opinion) compared to those
unwashed code loving masses, I just can't copy code above 5wpm" Sniff
Sniff :-(

We have more hams now than at any time in the history of Amateur Radio. From what I can tell, they are not all over the age of 43.

IMH and personal O, many of the problems we face today as a service stem from the phenomenal growth rate of several years back, where the influx of new hams outstripped the pool of willing Elmers. The lack of effective and appropriate elmering for the newcomers has probably led to at least as much loss of potential long-term hams as the Morse Code factor. I have to wonder why folks are not making as much a fuss about that factor as they are the Morse Code factor . . .

I have had many a long-winded and interesting Morse Code contact. Your mileage apparently varies.

I have for sale an Alinco dj-582 th with two high capacity batteries
and quick charger. Batteries give you 5 watts on high power.
Purchased the radio new a year ago. Good dual-band ht with extended
receive coverage for vhf and uhf. Radio isd
in excellent condition. Bought two at the time,
sold one. Need the cash, not the radio. Don't want to talk trades.
$250 plus shipping--firm.

Email me at this email address, or call (319) 758-0427.

Thanks and 73.

Yes, but your article about no-code Techs IS fiction. When will we be hearing about _that_ on Newsline Bill? Please have the intestinal fortitude to admit your mistake. The fact that Techs are upgrading at a fair pace would seem to me to be a much more welcome sort of story than the "new hams are going are going down the toilet" sort of thing you have deemed fit to air repeatedly in the past.

>Bill W0IYH

You don't need 5dB NF on HF, but somewhere in the region of 8-10dB on
10m, on the other bands it is less critical.
Drake 2-B works satisfactorily while not every R-4C are good. Some
have a noisy third mixer.....
3dB noise figure is possible on 2m with low cost valves like E88CC,
E189CC. We believed transistors were so good, but often they worked
not as good as they could have done in our 2m gear.

I would be interesting if somebody cared to note all particularities
in design of old radio sets, some engineers may still exist. Many
clubs seems to care for keeping old radio's but just too often they
are more interested in polishing wood boxes than trying to understand
the technique behind it.

We learned that a popular valve portable receiver had some positive
feedback in the IF, an IF xfmr had an extra winding for this, but this
could not be seen on the circuit diagram. (Radionette Kurer).
I am sure engineers will be glad to tell us some gimmicks they had to
use to make the sets ready for production. Racal RA17 is another
receiver which would never have reached the production line without
certain gimmicks made by a hacksaw on chassis!

It does? Your sample message looks like English to me. Or am I
missing something again?

> ...You don't get many intercontinental contacts above 50 MHz
> (normally), while you do on HF.

If language is the issue, then full HF access should only be
granted to those with demonstrated proficiency (including radio
procedure and vocabulary - "Appel general...parlez!") in three
or more major languages.

And just four years later, in 1969, we at National were building the MD-777/FRT, 2-30 Mhz synthesized, fully solid-state, motorized final tuning, Ledex switches on the front panel to allow for remote control of frequency selection, designed to work with transmitters up to (I think) 200KW, maybe 12 inches of 19" rack, don't remember the weight.

Right - I was always amused with how the hams in Cuba and Russia (and
a few other countries) used to put on their QSL card:

Transmitter - 40 watts (or 200 watts)

Receiver - 19 tubes

Like.... the QUANTITY of tubes they used somehow made it better???

Log periodics are also pretty good about rearward radiation with the
advantage that they only take up a lot of room in one plane.

5105. Which San Jose Amer. Legion group make the 2M j-pole?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-30 00:00:00 UTC
From: David Barnes <david_barnes@hp.com>
Message-ID: <34312644.5935@hp.com>
Source record: 189622

About 5 years ago, I bought a J-pole from an American Legion group somewhere in the San Jose, Calif., area. Cost about $20 at the time. Someone gave me their telephone number, and I called the guy who made them in his garage and picked it up at his house.

Anybody know which American Legion group that is, and how I can get in touch with them? They might be at the local swap meet, but I'm not in town this weekend, and so won't be able to get one for another month.

5106. E-Z Clone Software TM-V7A

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-30 00:00:00 UTC
From: Dave <david@cabot.mv.com>
Message-ID: <34318070.1B86@cabot.mv.com>
Source record: 189623

Does anyone have E-Z CLone? It is the software to clone the radio onto a computer, then manipulate or repeat it onto the same or another radio.

The Computer Development firm has discontinued it, and can't sell it to me. I need to find it.

Please reply if you know anything about it. It was quoted in the CQ Review of the TM-V7A as excellent, and I don't want to have to program another 180 frequencies and their alfa again!

Thanks
73
Dave

I'm terribly sorry to hear this. I can't even guess how many
articles and books by him I read and enjoyed as a lad. He was
an incredibly prolific and incredibly understandable author on
ham topics. I'm sorry I never met him. Thanks for letting us
know, Hans.

Greetings,

Just starting to plan for my new antenna farm. Are there any Hygain
Hytower owners out there? I realize it is a mighty expensive
"vertical", but some of my best dx came from a vertical. Anyway, just
looking for your comments.

I personally feel a great loss here; I never met him, but
read many of his articles and books. He was an avid QRPer
(as am I) and started Oak Hills Research, a very 1st class
operation selling excellent QRP kits.

We have truly lost an excellent ambassador/thinker in this
community. He will be missed.

I've had many CW QSOs with people overseas, many of whom
probably did not speak very much English. They did, however,
know Morse and the Q-signals well enough to get a set of
basic information across, which IS my point.

The point of the above exchange (emergency traffic) was to show that
a certain amount of information can be sent quickly and efficiently.

Morse has actually been shown to have average character lengths
(over the English language) that is just slightly
greater than that which would be afforded by the entropy
of the language (see signal processing & coding).

Or just one, single, common language, which we've already got.
